ÆTNA

Live Stock Insurance Company

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1868.

At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.

HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.

A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

Briton Medical and General Life Association,
with which is united the
BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG.:
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

aug 15-1yr

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing,—I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:

"*To whom it may concern*:..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.
Toronto, Dec. 3. 1867. 16-1y

Life Association of Scotland.

INVESTED FUNDS

UPWARDS OF £1,000,000 STERLING.

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS

Are applied on a special system for the Policy-holder's

PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,

WITH THE OPTION OF

LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains

A LARGE REDUCTION OF PRESENT OUTLAY

OR

A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,

Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in tact for Policy-holder's heirs, or other purposes.

THIS Company, established in 1851, is one of the reliable Companies doing business in the country has been steadily prospering. The *Massachusetts Insu Reports* show that in nearly all important matters superior to the general average of Companies. It off intending assurers the following reasons, amongst o for preferring it to other companies:

It is purely Mutual It allows the Insured to and reside in any portion of the United States and Eu It throws out almost all restriction on occupation fro Policies. It will, if desired, take a note for part Premium, thus combining all the advantages of a not all cash company. Its Dividends are declared an and applied in reduction of Premium. Its Dividen in every case on Premiums paid. The Dividends Phœnix have averaged fifty per cent. yearly. settlement of Policies, a Dividend will be allowed fo year the policy has been in force. The number o dends will always equal the outstanding Notes. It p losses promptly—during its existence never havin tested a claim. It Issues Policies for the benefit o ried Women beyond the reach of their husband's cre Creditors may also insure the lives of Debtors. Its P are all *Non-forfeiting*, as it always allows the assu surrender his Policy, should he desire, the Compa ing a paid-up Policy therefor. This important will commend itself to all. The inducements now by the Phœnix are better and more liberal than t any other Company. Its rate of Mortality is exce low and under the average.

Parties contemplating *Life Insurance* will find it interest to call and examine our system. Policies payable either in *Gold* or American currency.

PROSPECTUS.

E DOMINION TELEGRAPH COMPANY has been rganized under the act respecting Telegraph Com- chapter 67, of the consolidated Statutes of Canada. ect is to cover the Dominion of Canada with a com- te-work of Telegraph lines.

The Capital Stock

$5,000, divided into 10,000 shares of $50 each, 5 per t be paid at the time of subscribing, the balance to e id by instalments, not exceeding 10 per cent per —said instalments to be called in by the Directors as rks progress. The liability of a subscriber is limited the amount of his subscription.

The Business Affairs of the Compay.

re der the management of a Board of Directors, an- nal elected by the Sharcholders, in conformity with the ar- and By-Laws of the Company.

The Directors are of opinion that it would be to the ter t of the Stockholders generally to obtain subscrip- ns om all quarters of Canada, and with this view they pe to divide the Stock amongst the different towns n l ies throughout the Dominion, in allotments suited th population and business occupations of the different s es, and the interest which they may be supposed to e such an enterprise.

Contracts of Connections.

A tract, granting permanent connection and extraor- ina advantages, has already been executed between this m ay and the Atlantic and Pacific Company, of New rk thus, at the very commencement, as the Lines of this om ay are constructed from the Suspension Bridge, at ff (the point of connection) to any point in the Do- n , all the chief cities and places in the States, touch- the Lines of the Atlantic and Pacific Telegraph m ay, are brought in immediate connection therewith. A rmanent connection has also been secured with the Western Telegraph Company, of Chicago, whereby s mpany will be brought into close connection with t Lake Ports and other places through the North- st States, and through to California.

The Albion Hotel,

MONTREAL,

ONE of the oldest established houses in the City is again under the personal management of

Mr. DECKER,

Who, to accommodate his rapidly increasing business, is adding Eighty more Rooms to the house, making the ALBION one of the *Largest Establishments in Canada.*

June, 1868. 42-6mos

BY-LAW No. .

A By-Law to aid and assist the Toronto, Grey and Bruce Railway Company, by giving $250,000 *to the Company by way of bonus, and to issue debentures therefor, and to authorize the levying of a special rate for the payment of the debentures and interest.*

WHEREAS, by the Act of the first session of the Legislature of the Province of Ontario, passed in the thirty-first year of Her Majesty's reign, incorporating the Toronto, Grey and Bruce Railway Company, it is provided as follows: "And it shall further be lawful for any Municipality or Municipalities through any part of which, or near which, the Railway or Works of the said Company shall pass, or be situated, to aid and assist the said Company by loaning or guaranteeing, or giving, money by way of bonus or other means to the Company or issuing Municipal Bonds to or in aid of the Company, and otherwise, in such manner, and to such extent, as such Municipalities, or any of them, shall think expedient: provided always, that no such aid, loan, bonus, or guarantee shall be given except after the passing of by-laws for the purpose, and the adoption of such by-laws by the ratepayers, as provided in the Railway Act."

And whereas, by the seventy-seventh section of the Railway Act, chapter sixty-six of the Consolidated Statutes of the late Province of Canada, it is provided that no Municipal Corporation shall subscribe for stock, or incur any debt or liability, under the said Railway Act, or the Special Act, unless and until a By-law to that effect has been duly made and adopted, with the consent first had of a majority of the qualified electors of the Municipality in the manner determined by the By-law, after public advertisement thereof containing a copy of the proposed By-law, inserted at least four times in each newspaper printed within the limit of the Municipality, or if none be printed therein, then in some one or more newspapers printed in the nearest city or town thereto, and circulated therein, and also put up in at least four of the most public places in each Municipality.

And whereas the Municipality of the Corporation of the City of Toronto has determined to aid and assist the said Toronto, Grey and Bruce Railway Company by giving thereto the sum of $250,000 by way of bonus, under the authority conferred by the said Act first in recital.

And whereas, to carry the last recited object into effect, it is necessary for the said Municipality to raise the said sum of $250,000, in the manner hereinafter mentioned.

And whereas it will require the sum of $27,500 to be raised annually by special rate for paying the said debt of $250,000 and interest on the debentures to be issued therefor as hereinafter mentioned.

And whereas the amount of the whole ratable property of the said Municipality, irrespective of any future increase of the same, and also irrespective of any income to be derived from the temporary investment of the sinking fund hereinafter mentioned, or any part thereof, according to the last revised assessment roll of the said Municipality, being for the year one thousand eight hundred and sixty-eight, was $24,073,673.

And whereas the amount of the existing debt of the said Municipality is the sum of $2,144,853 44.

And whereas, for paying the interest and creating an equal yearly sinking fund for paying the said debt of $250,000, as hereinafter mentioned, it will require an equal annual special rate of one mill and one-eighth of a mill in the dollar, in addition to all other rates to be levied in each year.

Therefore the Council of the Corporation of the City of Toronto enact as follows:

I. That it shall and may be lawful for the said Municipality to aid and assist the Toronto, Grey and Bruce Railway Company, by giving thereto the sum of $250,000 by way of bonus.

II. That it shall be lawful, for the purpose aforesaid, for the Mayor of the said City to cause any number of debentures to be made for such sums of money as may be required for the said purpose, not less than twenty dollars each, and not exceeding in the whole the amount of $250,00', which said debentures shall be sealed with the seal of the said City, and be signed by the Mayor and Chamberlain thereof.

III. That the said debentures shall be made payable in twenty years from the day hereinafter mentioned for this By-law to take effect, at the Bank of Toronto, in Toronto, and shall have attached to them coupons for the payment of interest at the rate and in the manner hereinafter mentioned.

IV. That the said debentures will bear interest at and after the rate of six per cent. per annum from the date thereof, which interest shall be payable half-yearly on the first day of May and November in each year, at the Bank of Toronto, in Toronto.

V. That for the purpose of forming a sinking fund for payment of the said debentures, and the interest thereon, at the rate aforesaid, an equal special rate of one mill and one-eighth of a mill in the dollar shall, in addition to all other rates, be raised, levied, and collected in each year upon all the ratable property in the said Municipality during the said term of twenty years from the coming into effect of this By-law, unless such debentures shall be sooner paid.

VI. That this By-law shall take effect on, from and after the first day of January, in the year of our Lord, 1869.

VII. That the debentures to be signed and issued as aforesaid shall be delivered by the Mayor of the said City to the Trustees appointed (or to be appointed) in accordance with the tenth section of the said Act incorporating the said Toronto, Grey and Bruce Railway Company.

VIII. And it is further enacted, by the Municipal Council aforesaid, that the votes of the electors of the said Municipality will be taken on the said proposed By-law at the following places, that is to say:

For Saint Lawrence Ward at the City Hall in rooms heretofore used as a Police Court.

For Saint George's Ward, at No. 171 King Street west

For first electoral division of Saint John's Ward, at the Engine House, Elizabeth Street.

For second electoral division of Saint John's Ward, at the house on Hayter Street, where the last Municipal Election was held.

For first electoral division of Saint Andrew's Ward, at the Bay Street Fire Hall.

For second electoral division of Saint Andrew's Ward, at the Temperance Hall, Brock Street.

For first electoral division of St. James' Ward, at the Police Court, Court Street.

For second electoral division of St. James' Ward, at the house on Yonge Street where the last Municipal Election was held.

For first electoral division of Saint Patrick's Ward, at St. Patrick's Market, on Queen Street.

For second electoral division of St. Patrick's Ward, at No. 438, on the north side of Queen Street, west.

For first electoral division of Saint David's Ward, at the Berkley Street Fire Hall.

For second electoral division of Saint David's Ward, at the house on the north east corner of Parliament and Beech Streets, on the 8th day of December, at the hour of nine o'clock in the forenoon and closing at five o'clock in the afternoon of the same day.

And that the following will be the Returning Officers for taking the said votes:

For Saint Lawrence Ward, Mr. James Tilt.

For Saint George's Ward, Mr. R. B. Miller.

For first electoral division of Saint John's Ward, Mr. Andrew Fleming.

For second electoral division of Saint John's Ward, Mr. John Downey.

For first electoral division of Saint Andrew's Ward, Mr. Henry Sproatt.

For second electoral division of Saint Andrew's Ward, Mr. Andrew Riddell.

For first electoral division of James' Ward, Mr. James Crowther.

For second electoral division of Saint James' Ward, Mr. Robert Frazer.

For first electoral division of Saint Patrick's Ward, Mr. H. W. Murray.

For second electoral division of Saint Patrick's Ward, Mr. W. A. Lee.

For first electoral division of Saint David's Ward, Mr. John Burns.

For second electoral division of Saint David's Ward, Mr. Robert H. Trotter.

Take notice that the above is a true copy of a proposed By-law which will be taken into consideration by the Council of the Corporation of the City of Toronto after one month from the first publication in the *Christian Guardian, Daily Telegraph, Daily Globe, Irish Canadian, Daily Leader, Patriot, Watchman, Canadian Freeman, Canadian Monetary Times, Christian Baptist, Spirit of the Age, British Canadian.*

The date of which first publication was the 13th day of December, A. D. 1868, and that the votes of the electors of the said Municipality will be taken thereon at the following places in the said Municipality:

For St. Lawrence Ward, in rooms heretofore used as the Police Court, City Hall, Mr. James Tilt, Returning Officer.

For St. George's Ward, at No. 171 King Street west, Mr. R. B. Miller, Returning Officer.

For first electoral division of St. John's Ward, at the Engine House, Elizabeth Street, Mr. Andrew Fleming, Returning Officer.

For second electoral division of St. John's Ward, at the house on Hayter Street where the last Municipal election was held, Mr. John Downey, Returning Officer.

For first electoral division of St. Andrew's Ward, at the Bay Street Fire Hall, Mr. Henry Sproatt, Returning Officer.

For the second electoral division of St. Andrew's Ward, at the Temperance Hall, Brock Street, Mr. Andrew Riddell, Returning Officer.

For first electoral division of St. James' Ward, at the Police Court, in said Ward, Mr. James Crowther, Returning Officer.

For second electoral division of St. James' Ward, at the house on Yonge Street, where the last Municipal election was held.

For first electoral division of St. Patrick's Ward, at St. Patrick's Market, Queen Street, Mr. H. W. Murray, Returning Officer.

For second electoral division of St. Patrick's Ward, at 438, north side of Queen Street, Mr. W. A. Lee, Returning Officer.

For first electoral division of St. David's Ward, at Berkley Street Fire Hall, Mr. John Burns, Returning Officer.

For second electoral division of St. David's Ward, at the building at the north east corner of Parliament and Beech Streets, Mr. Robert H. Trotter, Returning Officer.

On the 8th day of December, A. D. 1868, commencing at nine o'clock in the forenoon, and closing at five o'clock in the afternoon of the same day.

JOHN CARR,
City Clerk.

CITY CLERK'S OFFICE,
Toronto, Nov. 13, 1868.

BY-LAW No. .

A By-Law to aid and assist the Toronto and Nipissing Railway Company, by giving $150,000 *to the Company by way of bonus, and to issue debentures therefor, and to authorize the levying of a special rate for the payment of the debentures and interest.*

WHEREAS, by the Act of the first session of the Legislature of the Province of Ontario, passed in the thirty-first year of Her Majesty's reign, incorporating the Toronto and Nipissing Railway Company, it is provided as follows: "And it shall further be lawful for any Municipality or Municipalities through any part of which, or near which, the Railway or Works of the said Company shall pass, or be situated, to aid and assist the said Company by loaning or guaranteeing, or giving money by way of bonus or other means to the Company, or issuing Municipal bonds to or in aid of the Company, and otherwise, in such manner, and to such extent, as the Municipalities, or any of them, shall think expedient; provided always, that no such aid, loan, bonus or guarantee shall be given except after the passing of by-laws for the purpose, and the adoption of such by-laws by the ratepayers, as provided in the Railway Act.

And whereas, by the seventy-seventh section of the Railway Act, chapter sixty-six of the Consolidated Statutes of the late Province of Canada, it is provided that no Municipal Corporation shall subscribe for stock, or incur any debt or liability, under the said Railway Act, or the Special Act, unless and until a By-law to that effect has been duly made and adopted, with the consent first had of a majority of the qualified electors of the Municipality in the manner determined by the By-law, after public advertisement thereof containing a copy of the proposed By-law, inserted at least four times in each newspaper printed within the limit of the Municipality, or if none be printed therein, then in some one or more newspapers printed in the nearest city or town thereto, and circulated therein, and also put up in at least four of the most public places in each Municipality.

And whereas the Municipality of the Corporation of the City of Toronto has determined to aid and assist the said Toronto and Nipissing Railway Company by giving thereto the sum of $150,000 by way of bonus, under the authority conferred by the said Act first in recital.

And whereas, to carry the last recited object into effect, it is necessary for the said Municipality to raise the said sum of $150,000 in the manner hereinafter mentioned.

And whereas it will require the sum of $16,500 to be raised annually by special rate for paying the said debt of $150,000 and interest on the debentures to be issued therefor as hereinafter mentioned.

And whereas the amount of the whole ratable property of the said Municipality, irrespective of any future increase of the same, and also irrespective of any income to be derived from the temporary investment of the sinking fund hereinafter mentioned, or any part thereof, according to the last revised assessment roll of the said Municipality, being for the year one thousand eight hundred and sixty-eight, was $24,673,673.

And whereas the amount of the existing debt of the said Municipality is the sum of $2,144,853.44.

And whereas, for paying the interest and creating an equal yearly sinking fund for paying the said debt of $150,000, as hereinafter mentioned, it will require an equal annual special rate of two-thirds of a mill in the dollar, in addition to all other rates to be levied in each year.

It is therefore enacted, by the Council of the Corporation of the City of Toronto,

I. That it shall and may be lawful for the said Municipality to aid and assist the Toronto and Nipissing Railway Company, by giving thereto the sum of $150,000 by way of bonus.

II. That it shall be lawful, for the purpose aforesaid, for the Mayor of the said Municipality to cause any number of debentures to be made for such sums of money as may be required for the said purpose, not less than twenty dollars each, and not exceeding in the whole the amount of $150,000, which said debentures shall be sealed with the seal of the said City, and be signed by the Mayor and Chamberlain thereof.

III. That the said debentures shall be made payable in twenty years from the day hereinafter mentioned for this By-law to take effect at the Bank of Toronto, in the City Toronto, and shall have attached to them coupons for the payment of interest at the rate and in manner hereinafter mentioned.

IV. That the debentures shall bear interest at and after the rate of six per cent. per annum, from the date thereof, which interest shall be payable half-yearly on the first day of January and June in each year, at the Bank of Toronto, in the said City of Toronto.

V. That for the purpose of forming a sinking fund for payment of the said debentures, and the interest thereon, at the rate aforesaid, an equal special rate of two-thirds of a mill in the dollar shall, in addition to all other rates, be raised, levied and collected in each year upon all the ratable property in the said Municipality during the said term of twenty years from the coming into effect of this By-law, unless such debentures shall be sooner paid.

VI. That this By-law shall take effect on, from and after the first day of January, in the year of our Lord 1869.

VII. That the debentures to be signed and issued as aforesaid shall be delivered by the Mayor of the said City to the Trustees appointed (or to be appointed) in accordance with the eleventh section of the said Act incorporating the Toronto and Nipissing Railway Company.

VIII. And it is further enacted, by the Municipal Council aforesaid, that the votes of the electors of the said municipality will be taken on the said proposed By-law at the following places, that is to say:

For St. Lawrence Ward, in rooms heretofore used as a Police Court, City Hall.

For St. George's Ward, at No. 171 King Street West.

For First Electoral Division of Saint John's Ward, at the Engine House, Elizabeth Street.

For Second Electoral Division of Saint John's Ward, at the house on Hayter Street, where the last Municipal Election was held.

For the First Electoral Division of Saint Andrew's Ward, at the Bay Street Fire Hall.

For the Second Electoral Division of St. Andrew's Ward, at the Temperance Hall, Brock Street.

For First Electoral Division of St. James' Ward, at Police Court, Court Street.

For Second Electoral Division of St. James' Ward, at House on Yonge Street where the last Municipal Elec was held.

For First Electoral Division of St. Patrick's Ward Saint Patrick's Market on Queen Street.

For Second Electoral Division of St. Patrick's, at 438 on the North side Queen Street west.

For First Electoral Division of Saint David's Ward, the Berkeley Street Fire Hall.

For Second Electoral Division of Saint David's Ward the House on the north-east corner of Parliament and Be Streets—said Divisions being set out in a By-law divid the said City of Toronto into Electoral Divisions for M cipal purposes—on the 8th day of December, A.D. 1 commencing at the hour of Nine o'clock in the forenc and closing at five o'clock in the afternoon of the same and that the following persons shall be the Returning Offi for taking the said votes:

For St. Lawrence Ward, Mr. James Tilt.

For Saint George's Ward, Mr. R. B. Miller.

For First Electoral Division of Saint John's Ward, Andrew Fleming.

For Second Electoral Division of Saint John's Ward, John Downey.

For First Electoral Division of Saint Andrew's Ward, Henry Sproatt.

For Second Electoral Division of Saint Andrew's W Mr. Andrew Riddell.

For First Electoral Division of Saint James' Ward, James Crowther.

For Second Electoral Division of Saint James' Ward, Robert Fraser.

For First Electoral Divlsion of Saint Patrick's Ward, H. W. Murray.

For Second Electoral Division of Saint Patrick's W Mr. W. A. Lee.

For First Electoral Division of Saint David's Ward, John Burns.

For Second Electoral Division of Saint David's W Mr. Robt. H. Trotter.

TAKE NOTICE

That the above is a true copy of a proposed By-law w will be taken into consideration by the Council of the of Toronto, after one month from the first publicati the *Daily Globe, Daily Leader, Daily Telegraph, Chr Guardian, Irish Canadian, Patriot, Watchman, Canc Freeman, Canadian Monetary Times, Christian Ba Spirit of the Age, and British Canadian*; the date of first publication was the 13th day of November, A.D. and that the votes of the electors of the said Municip will be taken thereon:

For St. Lawrence Ward, in rooms heretofore used a Police Court, City Hall, for which Mr. James Tilt is Re ing Officer.

For Saint George's Ward, at No. 171 King Street we which Mr. R. B. Miller is Returning Officer.

For First Electoral Division of Saint John's Ward, Engine House, Elizabeth Street, for which Mr. An Fleming is Returning Officer.

For Second Electoral Division of Saint John's Wa the House on Hayter Street, where the last Mun Election was held, for which Mr. John Downey is Re ing Officer.

For First Electoral Division of St. Andrew's Ward, Bay Street Fire Hall, for which Mr. Henry Sproatt turning Officer.

For First Electoral Division of Saint Patrick's W St. Patrick's Market on Queen Street, for which Mr. Murray is Returning Officer.

For Second Electoral Division of St. Patrick's W No. 438 on the North side of Queen Street west, for Mr. W. A. Lee is Returning Officer.

For First Electoral Division of St. David's Ward, Berkeley Street Fire Hall, for which Mr. John Bu Returning Officer.

For Second Electoral Division of Saint David's W the house on the north east corner of Parliament and Streets, for which Mr. Robert H. Trotter is Ret Officer.

On the 8th day of December, A. D. 1868, commenc Nine o'clock in the forenoon, and closing at Five o'c the afternoon of the same day.

JOHN CARR,
City

CITY CLERK'S OFFICE,
Toronto, Nov. 13, 1868.

PROSPECTUS

OF THE

DOMINION EXPRESS COMPANY OF CANADA.

ORGANIZED UNDER THE JOINT STOCK COMPANIES' ACTS.

CAPITAL STOCK, - - - - - - - $1,000,000,

In $10,000 Shares, $100 each.

IT is proposed to organize a DOMINION EXPRESS COMPANY, to meet the present and prospective demand for increased facilities of general transportation. It is the interest of Canadians to do their own work, and *accumulate* cash capital, and *one* of the objects of this scheme is the retention in this country of the profits arising from the business done.

Express Companies obtain "four-fifths" of their business from merchants and bankers, and no reason exists why they cannot transport their own goods, by their *own Agents, economically* and *efficiently*, and by a *union of capital* and *effort*, they hereby resolve so to do. Being thus united, and pledging to it their business and influence, secures to this Company certain and complete success.

This organization, like the mail system, is to extend, under *one general management*, to all cities, towns and villages in the Dominion, and to connect with all parts of the United States, and being but "one Company," will secure *unity, despatch* and *accuracy*.

It is proposed to distribute the stock widely, throughout the Dominion, in limited sums, apportioned as nearly as practicable to the business of the subscribers. The capital Stock of the Company to be not less than $1,000,000, in 10,000 shares of $100 each.

Ten per cent. of the stock subscribed will be required to be paid after the subscription shall have reached the sum of $250,000, and after a Charter shall have been obtained, of which due notice will be given to the subscribers; the subsequent calls, not exceeding *ten per cent. at any one time*, to be made at convenient intervals, as the demands on the Company may require. But the aggregate of all calls to be made will, it is believed, not exceed *twenty per cent.* of the Capital Stock.

The business to be done strictly on *cash principles*. With a paying business assured from the start, by *interested* and *reliable* Stockholders, it will thus be seen that a small per centage *only* of the subscriptions will be required to put the Company in working order, and it is confidently and reasonably believed that the receipts will thereafter maintain and extend it. And in order to secure an equitable voice in its management, the principal commercial centres will be represented at the Board, by Directors recommended by Stockholders of their own localities, who will also recommend to the Direction the local Agents, and thus secure a general influence in its management, as well as its business.

All Express enterprises, both in this country and the United States, have been decidedly successful, resulting from the profits of the business itself; and having an organization and a share list—such as are now proposed—with energy and economy in the direction, no doubt can be entertained of the most satisfactory results.

With such prospects, the Merchants of the Dominion, Capitalists and others interested in the success of this enterprise, are invited to become Stockholders.

The following shall be included in the By-Laws to be hereafter framed for the Government of the Company:

1. The Company shall be known by the name or title of "THE DOMINION EXPRESS COMPANY OF CANADA."
2. The Capital Stock of the Company shall be *One Million of Dollars*, divided into *Ten Thousand Shares of One Hundred Dollars each.*
3. Each Shareholder shall be liable only for the amount of Stock subscribed by him, her, or them.
4. The Shares of Stock of the Company shall be transferable; but no transfer shall be valid without the consent of the Directors, in writing, unless all shares shall be paid up in full.
5. It shall be lawful for the Stockholders, so soon as the sum of two hundred and fifty thousand dollars shall have been subscribed, to call a General Meeting of the subscribers, to be held at the office of the Company, in the City of Montreal, and proceed to elect nine qualified persons to be Directors of the Company, each of whom to be a proprietor of not less than ten Shares of Stock of the said Company, and three of whom shall form a quorum, with all the powers of the Directors. The said Directors shall also, at their first General Meeting, elect a President, Secretary, Treasurer, and General Superintendent or Managing Director, from amongst themselves.
6. The said Directors so elected shall proceed, without delay, to frame all necessary By-laws to govern the Company, and shall have power to alter and amend the same as circumstances may require.
7. The Directors shall not have power either to *sell out* the said Company to any other Express Company or organization now in existence, or hereafter to be incorporated, or to amalgamate with any other Express Company.
8. No Stockholder shall be at liberty to hold in his, her, or their name, more than one hundred shares of the Capital Stock of the said Company, without the consent of the Directors, in writing, first having been obtained.

PROVISIONAL DIRECTORS.

MESSRS. IRA GOULD,
WALTER MACFARLAN,
VICTOR HUDON,

MESSRS. WM. McNAUGHTON,
DUNCAN MACDONALD,
JOSEPH BARSALOU,

MESSRS. ALEXANDER McGIBBON,

During the Year, 6,597 Policies have been issued, insuring $22,541,940.

The Progress of the Company for the Past Four Years will be seen in the following Statement:—

	Assets.	Increase of Assets over previous year.		Assets.	Increase of Assets over previous year.
1864	$3,658,755 55	$1,005,217 63	1866	6,727,816 65	1,845,896 95
1865	4,881,919 70	1,223,164 15	1867	8,774,326 01	2,046,509 36
		Total increase	$6,120,788 69.		

One of the special features of this Company is the TEN YEAR NON-FORFEITURE PLAN.

The system popularly termed "The Non-Forfeiture Plan," was originated and first presented to the public by this Company, in their well-kno "TEN YEAR NON-FORFEITURE POLICY," in the year 1860; and its perfect adaptation to the wants of every class in the community, obviat every reasonable objection to Life Insurance, is shown from the fact that every other American Company has been compelled, in deference to pul opinion, to adopt it, although in many cases it is done in such a way as considerably to impair its value. It has received the *unqualified approval of best business men of the land*, large numbers of whom have taken out policies under it, simply as an investment.

By the Table on which this class of Policies is based, a person incurs no risk in taking out a policy. Insuring to-day for $10,000, if he should die to-morrow, the $10 immediately becomes a claim; and if he shall live ten years, and make ten annual payments, his policy will be paid for, and his dividends *still continue*, making

HIS LIFE POLICY A SOURCE OF INCOME TO HIM WHILE LIVING.

By the specific terms of these policies, and not by vague and indefinite statements made in circulars, a party after the second year does not forfeit what he has paid in premi Thus, if one insuring by this plan for $10,000 discontinues after the second year, he is entitled to a PAID-UP POLICY, according to the number of full years paid in, as follows:

Second year, two-tenths of $10,0 0 (amount insured), amounting to.. $2,000 | Fourth year, four-tenths of $10,000 (amount insured), amounting to.. $4,000
Third year, three-tenths of $10,000 (amount insured), amounting to.. 3,000 | Fifth year, five-tenths of $10,000 (amount insured), amounting to.... 5,000

And so on, until the tenth annual payment, *when all is paid*. The paid up policies, for the proportionate partial payments, as well as for the full amount, participate in Dividends of the Company during the whole existence of the policies. ☞ This being a purely mutual Company, ALL ITS PROFITS ARE DIVIDED AMONG THE ASSUR

Meetings.

THE GRAND TRUNK.

(Proceedings at the Annual Meeting Continued.)

Mr. Grant, the Secretary, by permission of the Chairman, read a statement by Mr. Handyside in reference to the management in Canada, especially with regard to the supply, quality and state of the rails used on the line. One man told him that if he dared to work as he could his earnings would be £3 a day. The original rails had been rolled with soft iron and put on the road again. He was told that some of the English rails had not lasted above twelve months. He found there were no inspectors of rails on the line. He was also told at the Rolling Mills at Toronto that many of the rails did not last above four years. Iron twice heated in order to work up with other iron became too soft, and unfit for rails. The re-rolling cost £6 per ton at Toronto; the soft iron rails were worn out in one year. In respect of the effect of climate good rails had been laid down for seventeen years, and were good now, he had had some of his information from Mr. Scovill, a manufacturer. The evil system was contracting without having proper stipulations and conditions to compel the contractor to do his duty to the Company. The contracts let were too large, and the term of the contract was too long. Above all, there was not an efficient mode of testing the quality of the rails before they were laid down on the track. So that their qualities were never known till after being tested on the line by the rolling stock passing over them. He also stated that the Company never accepted the lowest tender.

Mr. Brydges reiterated his contradiction.

Sir Raymond Jarvis remarked that he did not see in the list of share and bondholders the names of any Canadian shareholders.

The Chairman said that the reason was, that the Canadian list was not published.

The Secretary then went on with the reading of Mr. Handyside's documents. He recommended that the present plant should be put in good and efficient repair before any more money was expended on new rolling stock. The management of the Grand Trunk was very unfortunate. The information given by Mr. Scovill was signed by him in the form of letters. Mr. Handyside had also visited the wheel works at Toronto, and stated that he had received every facility from the Chairman of the company, Mr. Brydges, and Mr. Hickson, the secretary in Canada. It was the opinion of Mr. Handyside that Mr. Brydges had too much work to do, he had to direct every kind of work, whether he understood it or not, and although it entailed a great deal of unnecessary labor on Mr. Brydges, he did not think such a system either so efficient or so economical as it might be made by a proper division of labor. He considered that the passenger-train service was badly managed, trains were sometimes three hours behind owing to the track being a single one. The goods trains retarded the passenger trains, and that was felt in the receipts. He thought the Directors should endeavor to pay the interest on the first, second, and third preference bonds, and leave the improvement of the line to come out of the surplus. The population and wealth were increasing, all along the western portion of their line cottages were being taken down in many places to make room for larger and more substantial buildings.

Mr. Handyside said that some people might have a very poor opinion of the Grand Trunk, but he had been over the railway and had great faith in the resources of the line. He had an idea of those resources, but he believed, from the way the company was managed, whatever the traffic might be, the shareholders would never get a farthing. He would tell them from the evidence he had got from the people on the line, that the line was badly managed. He assured them that that was the opinion that he had got from the people working on the line. In coming to Montreal and Toronto, he had traveled with the superintendent of the line, and he had said, when he (Mr. Handyside) was speaking about the short time the rails lasted, that he could show him iron rails that had been laid down on the track only two months, which were entirely worn out. He had found out that the reason of these rails so soon wearing out was that they were made of soft and old iron rails, which were rolled again. He had gone to the mills where they were rolling rails, and he assured the meeting that there was no inspector there, notwithstanding all that had been said about the bad iron. He bore no ill-feeling to Sir Edward Watkin, nor to Mr. Brydges, but he laid all the trouble that had fallen on the company to their charge. Iron lost, it is well known, 25 per cent. in re-rolling, and he had seen people in the mills who were buying soft iron and putting it in the middle of the rails. They had heard a great deal about the wear and tear of rails in Canada, but he believed that rails, if properly made, would last as long in that country as in England. There was not a single testing engine from one end of the line to the other, and he could prove it.

Mr. Rokeby Price said that the line he chalked out to produce peace and harmony to the Grand Trunk was the resignation of the chairman and the board. Anything short of that would not do.

Mr. Maxwell Heslop, was an unfortunate bondholder in both companies, the Buffalo and Lake Huron and the Grand Trunk. Therefore, it was to him doubly unfortunate to see the warfare between the two companies.

Mr. Molesworth thought their attention should be directed to the present and future, and let every one retire from the new board. It appeared that Mr. Brydges had answered all the questions, and they should now see how those tests were to be applied in respect of the rails, and some practical man to carry them out.

Mr. Brydges said from some of the observations he had heard, he hoped the meeting would give him fair play. He had devoted the whole of his time to the service of the Company, and all his exertions and ability, and he could do no more. He had answered Mr. Scovill's letters. Mr. Handyside had acknowledged that he received every facility in his inquiries from the general manager in Canada, but he did not stop long enough in the country to get all the requisite information. Captain Tyler had reported that better rails were made in Toronto than those that came from England. Corruption did exist no doubt, and it was difficult to get contracts carried out

properly. Tenders were invited, and those offered at the lowest price were always accepted provided the materials, &c., were as good as others could supply. Mr. Creak's first question was about the rails. On the 30th June, 1868, there were 1,377 miles of railway open, of which 808½ consisted of T rails fished, 232 miles of T rails not fished, leaving 336½ miles of original U rails. There were 118 miles of the old rails on the Riviere du Loup line; nearly 200 miles on the Portland section, which would have to be renewed in about three years. The T rails were in good order. The T rails, 68 miles, on the Buffalo line would be renewed. As to the rolling stock it was all in good condition. The number of cars under repair was about 3 or 4 per cent. of the whole, not more than that. They had constructed from 60 to 70 which were charged to working expenses. They had 298 engines, including those of the other two Companies. There were 33 engines not in use when Mr. Trevethick made his report, because after the effects of the winter they had always a larger number of repairs. From 20 to 25 per cent. of the whole engine stock in England were generally out of use or under repair. During the last four years they had built in their shops at Montreal 21 engines of large size out of revenue, to replace other engines wearing out. With regard to the stock of engines they had 7 more than they had bought or broken up. The average cost of renewals of way from the 1st January, 1860, to January, 1867, was $468 80 per mile, while on the Great Western of Canada the cost had been $646.49 per mile. The Great Western had expended $1,715,000 for maintenance and renewals, and they had now commenced renewing their line over again. The proprietors must bear in mind that there must always be renewing the line in one place or another. The extent of the renewals would depend upon the amount of the traffic, the effects of climate and the nature of the materials used. It was impossible to state what the renewals would cost, $646 a mile was enough at one time, but they had since cost more. He was reminded by Mr. Creak that he had reported to the board about three years ago what would be required for the next ensuing three years, and that the estimate had been exceeded. The average cost of renewals in the years 1867 had been £139,000 for the whole 1,377 miles, or say £140,000 for renewals per annum. They never could stop renewals, they would always go on so long as the railway was worked. They could do the renewals only during the months when the climate permitted, in the other part of the year the permanent way was frozen up. As to the question of ballasting there were considerable portions of the line that had never been ballasted at all. They had spent between £30,000 and £35,000 in ballasting in three years, and he wished they could have spent more. The free passes was another question. There could be no greater boon to him than taking away the power to issue free passes. Other Companies issued free passes to parties having goods traffic on the line, to members of the press, and to the officials of other Companies having connecting lines with their line. They only had complied with the usual rule in respect to free passes all over America, and they must do the same as other railway Companies did. He had New York passes sent to him, and piles of them for other lines in the United States. They issued them only to persons engaged in the Company or to the members of the press, and the railway officials of other lines. He could say distinctly that they restricted to the utmost possible extent the issue of those passes.

Mr. Creak wished to know whether Mr. Brydges desired a resolution from the shareholders prohibiting him from granting these passes.

Mr. Brydges said no; it was the practice of the country to grant these passes, and it was impossible to do otherwise than follow it. The next question referred to the greenbacks. He was asked how they got them, and why they did not charge up the fares or rates in greenbacks so as to cover the loss on exchange. The receipt of greenbacks arose from traffic passing from the United States over their line. They must recollect that there were four or five competing lines to their line from east to west, and if the Grand Trunk refused to take the current rates in greenbacks the consequence would be that the passengers and freighters would not pay more than on the American lines, and the Grand Trunk Company would lose the traffic thus obtained.

Mr. Spencer Herapath understood it to mean that if the traffic of the Grand Trunk were confined to purely Canadian traffic, there would be no greenbacks to exchange; but as the interchange of traffic between American and Canadian lines involved payment in greenbacks, they must accept them in payment and incur the loss in exchange, or abandon that portion of through traffic.

Mr. Brydges then proceeded with his reply to the questions of Mr. Creak. He was asked why was not coal cheaper than wood to burn, and why was not the wood used on the Grand Trunk as effective as that used on the Great Western of Canada. The contract for wood let this year was a little under 16s. per cord, and at that price it would not be economy to use coal. In addition to the price of coal at Quebec it would have to be carried in barges to Montreal, which would add a dollar more to the price of it; then about 99 per cent. of their locomotives had iron fire boxes, which would soon be destroyed by burning coal fuel. As to the patent by Mr. Yates for mending rails, it had been sold in 1865, and was now in other hands. The Company's road was frozen up to the middle of May in each year. He had come to the last of Mr, Creak's questions, and he had stated what was perfectly true. He hoped if there were any more questions to answer or charges to make against him they would be made now, as he was there to answer them.

Mr. Prance asked if Mr. Brydges had not a Government commission for the Intercolonial Railway.

Mr. Brydges said he had not any Government commission, and gave the whole of his time to the service of the Company.

Another report puts it in this way:

Mr. Prance wished to know whether it was not a fact that Mr. Brydges had been appointed to the Intercolonial. How was it possible for him to give his whole time and attention to the affairs of the Grand Trunk in this case?

Mr. Brydges had never been offered the appointment, and therefore had not accepted it.

The Chairman said that it had been intimated some time ago that Mr. Brydges might be appointed to the Intercolonial, and it had been a matter of discussion with them whether it would not be advisable for Mr. Brydges to accept that post.

After some further remarks Mr. Creak's amendment, on being put to the meeting, was declared carried on a show of hands, but a poll was demanded by the chairman. Mr. Batten and Mr. Creak were appointed scrutineers, and a poll was ordered.

THE CANADA SALT WORKS COMPANY OF GODERICH.

At a meeting of the Directors, held at Windsor, on November 21st, 1868, the President made the following report:

"GENTLEMEN,—It is with infinite pleasure I beg to inform you of the entire success of our enterprise thus far, and the healthy condition of our finances. Our well is completed, having passed through 38 feet of solid salt at a depth of 997 feet, and obtained the strongest brine yet found. Everything is now in perfect order, and the work of the most substantial nature, and nothing remains to be done except building the blocks for evaporating; and, in one sense, it is fortunate our well was not sooner finished, as, from recent experiments, a much cheaper mode of evaporation has been discovered.

"Although our capital stock is fourteen th sand dollars, we closed the stock-book when thousand seven hundred dollars had been scribed, and as soon as sixty per cent. on the mentioned sum has been paid in by the st holders the Company will be entirely free debt and have a balance of one hundred eighty-three dollars to their credit, so I feel ranted in hoping that the stock subscribed finish the works and commence the manufac of salt.

"I have every reason to believe that our vestment will be a most profitable one from following facts:—Although our well is the finished, and no others have been commenced Canada, the manufacturers have been unab fill their orders, and the price obtained is thirty to forty cents per barrel advance on other salt, which advance is also obtained in Western States, and leaves a margin for after paying the gold duty of seventy-five c so that should the Reciprocity Treaty no course of negotiation be consummated, we ca estimate the value of our property, while wit such treaty it is most valuable."

Moved by Hiram Walker, Esq., seconde Wm. McGregor, Esq., That the President's r is most satisfactory and be adopted.—Carrie

Moved by Henry Kennedy, Esq., seconde G. W. Girdlestone, Esq., That a call of 1(cent. be made, payable on December 10th, to cover all expenses to date.—Carried.

Moved by Henry Prince, Esq., second Hiram Walker, Esq., That Messrs. Kenned McGregor do proceed at once to Goderich ceive the well from the contractor, and to thor ly examine the different modes of evapor deciding upon the best and most economical to receive tenders from contractors for buildi same, and to report to the Directors at a m to be called immediately after their retu Carried.

Moved by G. W. Girdlestone, Esq., secon Hiram Walker, Esq., That the proceedings meeting be printed and forwarded to the dif shareholders.—Carried.

ORONTO STOCK MARKET.

eported by Pellatt & Osler, Brokers.)

pply of securities still continues very he books of several of the Banks are ti the payment of dividends due on 1st

ock—Montreal is offered at 140 ex-divi- wh buyers at 137. Nothing doing in 4 would be paid. There are sellers of o par, ex-dividend. No Toronto to be 11 is freely offered. Royal Canadian is 1 at 1½, and no buyers. There are buyers nce at 105; none in market. Gore is in 42, with sellers at 43. Merchants' has ced the last sale was made at 112. There ve of Molson's at 108½; no sales. City is t 102 ex dividend. Buyers would give l Peuple. Jacques Cartier is offered at vidend. Sales of Mechanics' occurred Tre are buyers of Union at 104. Nothing n her banks.

ds.—The market is quite cleared of Can- Dominion Stock offered at 104½. we considerable sales of Toronto at rates ut 7 per cent. interest. No County in ey would readily be taken at rates to ½.

.—City Gas continues in great demand n market. There were several sales of rmanent Building Society at 124 and the latter price would now be paid. anada would command 115½; none in here were sales of Freehold at 104 to idend, and buyers still offer the latter Montreal Telegraph in market; 132 would be paid. There were sales of Canada Landed Credit at 73, at which rate there are buyers. Mortgages are in demand to pay 8 per cent. interest. Money is readily obtainable on good paper.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, Nov. 24, 1868.

As reported in my last there is a plethora of money, and the Banks have rather reduced their rates of discount; the amount of good bills offering is very light, and readily taken at 6 to 6½ per cent., and on the street fair commercial paper is taken at 10 to 12½. Stocks still rule high, latest quotations being, Bank of Montreal, 136 ex div.: but holders are firm at 140, the demand is active, and clearly points to the feeling, that this Bank will have the management of the Government issue. City Bank easier at 102, but buyers will not give over 101. Ontario is also easier, with buyers at 97. Peoples are wanted at 106. Merchants, several transactions at 112, the closing rates being sellers 112½, buyers 111½. Toronto enquired for at 118½. No great change in other Banks, but the prices generally are very stiff. In other stocks Telegraph are wanted at 133 but none offering. Gold 132½ to 134. Richelieu stock holders have advanced their views, sellers wanting 120, buyers offering 115. Corporation bonds (6 per cent.) active at 94 at 95. Mining Consols offering at $2.75, with buyers at $2.25. Dominion Stock 105.

I give latest prices—Gold buying 4¼, selling 3¾ Greenbacks buying at 26, selling at 25½ to 25¾. Gold drafts on New York, par. Bank Exchange buying 25¼, selling 25½.

PROVINCIAL NOTES.—The following is a statement of the Provincial Notes in circulation, the 4th Nov., and of the Specie held against them at Montreal, Toronto, and Halifax, according to the Returns of the Commissioners under the Provincial Note Act:

Provincial Notes in Circulation—		
Payable at Montreal	$3,738,593	
Payable at Toronto*	1,266,407	
* Including $76,000 marked St. John.		
Payable at Halifax	206,000	
		$5,211,000
Specie held—		
At Montreal	$593,333	
At Toronto	500,000	
At Halifax†	42,000	
† Estimated, the return not being received.		
		$1,135,333
Debentures held by the Receiver General under the Provincial Note Act		$3,000,000

POST OFFICE SAVINGS' BANK.—The following is a statement of the Post Office Savings' Bank Account, for the month of October, 1868, published in accordance with the Act 31 Vic., chap. 10, sec. 72:—

In hands of the Receiver General as per last Statement (Sept. 30th)		$357,953.87
Amount received from depositors during Oct'r	$76,074.00	
Interest paid on closed accounts	57.35	
	$76,131.35	
Withdrawal cheques paid during October	20,013.98	
		55,212.38
In hands of Receiver General Oct. 31		413,171 24
Bearing interest at 4 per cent	$244,088.39	
Bearing interest at 5 per cent	167,200.00	
Bearing no interest, being the amount in the hands of the Receiver General to meet outstanding cheques	1,882.85	
		$413,171.24

Insurance.

FIRE RECORD.—Plattsville, Ont., Nov. 17.—J. B. Sorley's tannery and contents; loss from $5,000 to $6,000; insured for $2,500 in the Western and $2,500 in the Provincial; total insurance, $5,000.

Gananoque, Ont., Nov. 20.—The woollen factory of R. P. Colton, part of which was occupied by Gordon & Kirkham, took fire in the fourth story from a shoddy machine and was totally destroyed. The machinery, amounting to $500, was saved. Loss of Mr. Colton about $9,000; insured in the Western for $2,100 and in the Provincial for $4,000. Gordon & Kirkham's loss abont $2,000; partly insured. Also, the nail factory of Corwin & Britton was severely damaged; loss about $1,000; no insurance.

Almonte, Ont., Nov. 19.—Two large frame buildings, a grist mill, and a woollen mill, owned by Mr. Henry, of Ottawa, were destroyed by fire early this morning. Loss, $16,000; insurance $8,000.

St. Vincent Township, Grey Co., Nov. 16.—House of James Arthur, 9th con., totally destroyed; loss $650; insurance $300; part of the furniture was saved.

Owen Sound, Ont., Nov. 12.—Store of H. Taylor, Division street, totally destroyed; loss $5,000; insurance $2,000. House of Mr. Gordon adjoining somewhat damaged, also furniture. The fire engine prevented the fire spreading further.

Quebec, Nov. 20.—A number of small fires have recently occurred here, but nothing of consequence.

North Oxford, 16th Oct.—Barn of Mr. Francis Box; origin of fire unkuown; no insurance.

— The Western Insurance Company of this city have presented Capt. G. W. Rounds of Buffalo with an elegant silver tea set, in acknowledgment of the services of that gentleman, in rescuing the schooner *Ionia* from peril, that vessel being stranded off Silver Creek.

— The hail insurance companies of France insured in 1867 about $50,000,000 against the hazards of hail in the departments of France. The loss was about seventy cents for each hundred dollars insured.

OIL TRADE OF PENNSYLVANIA.

The Titusville *Herald's* Monthly Petrolcum Report for the month ending October 31st, 1868, shows the total production for that month, the average per day, and from January 1st to Nov. 4.

Total shipments of crude for October of brls. of 45 galls. each	325,666
Add to reduce to brls. of 43 galls. cach	15,147
Total shipments of brls. of 43 galls. each	340,813
Stock on hand, Oct. 1st, brls. 266,888	
Stock on hand, Nov. 1st, brls. 266,180	
Add increase on Nov. 1st	2,372
Total production during October, brls.	343,185
Average per day for 31 days	10,133
Production previously reported, brls.	2,747,371
Total production from January 1st to November 1st, brls.	3,090,556
Average per day for 305 days, brls.	10,133

The average daily proportion at the wells on farms and in districts is given during the last two days of the month, for the purpose of showing whether the reduction is receding or enlarging.

The following table shows the production as taken from the guage tanks at the wells during days and periods named:

November 7th, 1867, brls.	9,885
December " " "	10,462
January " 1868, "	11,035
February " " "	10,811
March " " "	9,768
April " " "	8,943

Average per day for the twenty-three days ending April 30th, bbls	8,650
Average per day for the thirty-one days ending May 31st, bbls	9,790
Average per day during May 30th and 31st, bbls	10,035
Average per day during June 29th and 30th bbls	11,299
Average per day during July 30th and 31st, bbls	11,405
Average per day during August 30th and 31st, bbls	12,347
Average per day during September 29th and 30th, bbls	12,527
Average per day during October 30th and 31st, bbls	11,113

THE DEVELOPMENT AND THE TERRITORY.

The number of new wells being drilled on November 1st, was 435, an increase of fifty-seven from the 1st of the previous month. This increase is a large one and was unlooked for at this season of the year. The number of wells drilling on the 1st inst., was forty-four greater than at any previous date during 1868, and one hundred and ninety more than at the same date in 1867. Of these 435 wells drilling on the 1st, 213 were located in the Pleasant district. In this district the known producing territory has again been greatly extended by the finding of several large producing wells. It now embraces from three to four square miles, and is much the largest tract of producing territory ever discovered.

On Cherry Tree Run the development has been very unsatisfactory, six or seven new wells having been tested that did not produce more than from three to twenty barrels per day. On Charley Run, near Oil City, there is some demand for leases, and it is probable that several wells will be commenced in that district during November. On Upper Cherry Run the known producing territory has been found to be but a few acres in extent, and the number of drilling wells has fallen off. To the east of this district a vein of black petroleum, like that found in the whole of the Pleasantville district, has been discovered, and it is almost certain that it is but a continuation of the vein found in that district.

From the experience of the past eight years, there is no reason to believe but that the territory in Pennsylvania can, for at least a century, supply any demand which may arise. Although on a general survey of the whole territory, there now appears to be little that, by development, is known to be of the producing order, that has not been drawn upon more or less largely, yet there is no doubt but that there are still large tracts which remain undeveloped, and the territory that has been abandoned can, by exhausting the water from it, again be made to produce. The work of exhausting the water from abandoned territory has been actively commenced, and the result has already proved that by further prosecution of it, the territory can be made to produce, although not so largely as at first.

THE STOCK OF PETROLEUM.

The stock of petroleum in the region has remained without material change, having amounted on November 1st to 266,180 barrels, of forty-three gallons each. This stock shows an increase of but 2,372 barrels. The amount in iron tankage has been increased by 1,272 barrels. Compared with November 1st, 1867, the total stock shows a decrease of 338,820 barrels.

In the total stock are included the amount in iron tankage throughout the region, 5,000 barrels, at Titusville, 500 on the Hyde & Egbert Farm, 1,300 at Oil City, and 1,500 barrels at Tidioute, all in wooden storage tanks, and the amount in tanks at the wells which was 81,000 barrels. This latter amount is owned by producers, dealers, and shippers, the latter parties owning two-thirds. Of the stock at the wells 32,000 barrels were held at Pleasantville.

The following recapitulation gives in small space the condition of affairs at the end of the month:—

Total amount of petroleum in iron and wooden storage tanks and on the lands of producers, brokers, and shippers, bbls	266,180
Total capacity of iron tankage, bbls	1,070,539
Total amount of petroleum in iron tankage, bbls	176,880
Amount of iron tankage empty, bbls	893,659
Number of new wells drilling	485
Daily production, bbls	11,113

The Canadian Monetary Times.

THURSDAY, NOVEMBER 26, 1868.

NEW MINING LAWS.

The discussion evoked by the Act of last session respecting mines and minerals, the manifest impolicy of putting in force its provisions, and the repeated failures in Madoc to extract gold in paying quantities, not to speak of the personal examination by the Commissioner of Crown Lands of the mineral region to the north-west, have brought about a change in the mineral policy of the Government of Ontario. This change is embodied in the following resolutions introduced last week in the Assembly:

1. *Resolved*, That, in the opinion of this House, all royalties, taxes or duties, which by any patents heretofore issued are reserved, or made payable upon or in respect of any ores or minerals extracted from the land granted by such patent, and situated within this Province, should be repealed and abandoned, and that such lands and ores and minerals should be henceforth exempt from every such royalty, tax or duty.

2. That the proprietors of all private lands heretofore granted by the Crown, situated within this Province, and their assigns, should, as against Her Majesty, her heirs and successors, have the right to mine for gold and silver upon such lands, for their own benefit and advantage.

3. That it is expedient that the unoccupied Crown Lands of this Province should be declared free and open to explorations for mines and minerals, and that persons should, under proper regulations, be allowed to mine upon such lands, for their own benefit and advantage, free from any charge or royalty.

The system of royalties has undoubtedly obtained a place in our legislation from time immemorial, as part and parcel of a p which, so far as the furtherance of publ terests is concerned, has only prod wonder at its intense stupidity. Unde regulations first in force in the Superior Huron mineral region, parties might and secure locations of ten square mil four shillings per acre. Those regula remained in force until 1853. The change was the imposition of an explor fee of £25; the quantity of land was li to 400 acres; and the price per acre raised to seven shillings and sixpence 1861 the price was fixed at $1 per acr the locations were subject to the con that the patent should not issue u had been shown that the mine had worked for one year. But these rul not apply to gold and silver mines. In the provision respecting the working of was abolished, and in lieu of it a roy 2½ per cent. was imposed. In 1863, i of a royalty, a fixed duty was exacted per ton of ore extracted. In 1865, it w cided to waive the gold clause, in so mining lands on Lake Superior were c ed. In 1866, all royalties were abo In 1868, royalties were reimposed. of 1868 was passed under the impressi the mines of Thunder Bay were fab rich, and that their product would lo value of silver throughout the world. scarcely necessary to say that it ne enforced. It is now proposed, and w very sensibly, to repeal the act of sion, and to abolish all royalties, t open the Crown Lands free of charg out depriving any parties of a right chase. Those who do not desire to will be allowed to occupy a claim as they continue to work, and to do s charge or royalty. The policy of t ernment will commend itself to all in in the progress of the country as calculated to develope our mineral r

bts	96,605
	$592,710

dden flight of the cashier leaving a
$90,000 is rather a serious matter
Directors of the Commercial Bank.
nitution has been very unlucky, and
ted on the sufferance of the other
months past, and although it held
posits ($100,000) on behalf of the
vernment, its credit was exhausted.
k of Montreal refused its paper and
e soon followed suit. The Dominion
ent came to the rescue of the Local
ent and expressed its readiness to
vances to prevent embarrassment.

Mr. Tilley stated in a telegram that there is a supply of gold in St. John. On this the *Freeman* makes the following comments:

"The other banks complained bitterly some time ago that the Bank of Montreal abused its position as the Government agency to force specie from them, merely for the purpose of hoarding it, and it was said at one time that over Three Hundred Thousand Dollars had accumulated in the possession of the Montreal Bank. But the amount of Savings' Bank deposits on July 1st, 1867, was $777,-259. If gold to that amount, or half that amount has been kept lying idle in St. John, while the Dominion Government was borrowing from the very same Bank of Montreal at 7 per cent. and commission, the House of Commons should certainly endeavor to know "the reason why."

The *Morning News* points this moral :—"Meanwhile there is one great lesson to be gathered from the record of the disasters which have befallen the Commercial Bank, that in all financial and industrial associations the co-operators at large should see to it that frequent, exact and exhaustive examinations should be made. No namby pamby talk about having confidence in Directors, Managers, Treasurers, Secretaries, and so forth, should for one moment be listened to, if confidence is intended as a substitute for scrutiny frequent and severe. Many and many a disastrous failure would have been avoided had this been done, and infinite suffering averted from those not deserving of it and but ill able to endure it."

THE CRISIS IN NEW BRUNSWICK.

(From Our Own Correspondent.)

St. John, N. B., Nov. 26, 1868.

Our community is in the midst of a terrible commercial and monetary panic, which for duration and intensity has never been equalled in the Province. Indeed, it seemed at one time as though the whole monetary system of the country was about to be overturned, and everything reduced to chaos. So wild was the excitement, as disclosure after disclosure burst upon the public ear, that men stood aghast, and asked each other,—What next? As I am sure our friends in the Western Provinces must feel anxious to learn the history of our troubles, I will endeavour to give something like a connected narrative of the events of the last fortnight. The first mutterings of the coming storm were heard on Monday, the 9th, when some sales by auction of Commercial Bank Stock took place, the price realized being only $16 per $100 share. Towards the close of the day, it began to be rumoured that the bank had had large amounts of English Exchange returned. It was surmised that these were connected with the failure of the bankrupt Lingley, (who it will be remembered absconded some weeks since,) and the House of Mackay Brothers, of Liverpool, also bankrupt. This rumour gained strength, and after bank hours the various broker's offices were besieged by applicants anxious to get rid of their notes. They were of course rejected, and when Tuesday morning came and the bank doors remained closed, the worst fears were confirmed. Still as the bank was known to have a good deal of outstanding commercial paper falling due, for which their own notes would be available, it was thought that the inconvenience would be but temporary, and Tuesday and Wednesday passed off comparatively quiet. Thursday and Friday an impression got abroad (it is impossible to say how) that the St. Stephen's Bank was unsafe, and a run for gold commenced on the agency here. This agency was conducted by Mr. S. J. Scovil, who very imprudently charged 1 per cent. for cashing the notes, which had the effect of inducing the other banks to throw them out, and from this hour the fate of the St. Stephen's Bank was sealed. The panic spread, and on Saturday Mr. Scovil's office was closed, and a placard intimated that the notes would only be redeemed by the bank itself at St. Stephen. It seems remarkable that up to this time the Directors of the bank at St. Stephen were ignorant of the imminent danger which threatened their institution, and indeed only heard of it by chance. This brings us up to Saturday the 14th, and it is here proper to describe the position occupied by Mr. Scovil. He was the recognized agent at St. John of the St. Stephen's Bank, both for the circulation and redemption of its paper; but in addition to that he did a large brokerage, exchange and insurance business, and received money on deposit, for which he allowed 6 per cent. interest.

To resume my narrative:—On Monday morning it was discovered that the cashier of the Commercial Bank (Mr. George P. Sancton) had absconded, a defaulter to the amount of, it was stated, $90,000. This did not mend matters, but still people were far even then from guessing the whole extent of the impending disaster. Tuesday brought the St. Stephen's Bank Directors, and then the astounding discovery was made that Mr. Scovil was a defaulter to the Bank, in $60,000, and that the whole of the vast amounts deposited with him, had been swept away in gold speculations in New York. It is impossible to ascertain at present the exact amount of the deposits held by Mr. Scovil; but general consent seems to place it as high as $150,000 to $200,000. The St. Stephen Directors went manfully to work, and when they left St. John on Tuesday, it was generally understood that the Bank would keep up, and it was thought and hoped that the crisis was past. Later in the day, however, the Cashier, (who had been left to watch matters in St. John), had another interview with Scovil, and telegraphed the Directors at St. Stephen to suspend payment. Universal distrust took possession of the community. Prince Edward Island notes, Nova Scotian notes, Commercial and St. Stephen Bank notes, all were refused, and travellers from the north shore, P. E. Island, and parts of Nova Scotia, found themselves with pockets full of useless bank notes. A run for gold commenced on the other banks, but it was principally for small sums; and as it was well known in the commercial community that they were well prepared, it scarcely extended in their case beyond the numerous, though not wealthy class, who can scarcely distinguish one bank note from another. Some of this class could scarcely be made to believe that the gold they were receiving was genuine, and some amusing episodes occurred which will be long remembered. Thus passed Thursday and Friday, the days of the height of the panic. On Saturday a telegram was sent to all the city papers from the President of the St. Stephen's Bank, which had the effect of greatly restoring confidence, and the notes of his bank, which had been as low as 60 cents to the dollar, went up to 80 and 90 cents. As I write, the feeling is decidedly improved, and hopes are confidently entertained that the worst is past. Such is a brief sketch of the greatest financial disaster which ever befel this or perhaps any other community of the same extent and numbers. Of the causes which have led to it, I have not the space now to speak; neither shall I give currency to the many rumours of failure in the mercantile community which have been set afloat. It seems almost impossible that such a crisis should not produce a plentiful crop, but as yet none have actually transpired.

THE DOMINION TELEGRAPH COMPANY.

We copy the following communication from the President of the Dominion Telegraph Company, addressed to the Editor of the Montreal *Gazette*:

SIR,—May I ask the privilege of replying, through your columns, to an article which appeared in a Montreal paper, *The Trade Review*, of the 13th instant, assailing the Dominion Telegraph Company, and impeaching the good faith of those who are promoting that enterprise.

When my attention was first called to the article in question, I hastily drew the conclusion that it had emanated from the head quarters of the Montreal Telegraph Company, and I frankly confess to having been pained at the thought that the President of that Company, a gentleman occupying a prominent position in the commercial world, towards whom, in former days, I stood in no unfriendly relations, had sanctioned a resort to personalities as an effectual means of damaging a rival Company. I was soon satisfied, that in entertaining this impression I had done Mr. Allan a wrong, as later in the day a printed paper was handed to me, headed "Private Circular," written by Mr. Dwight, an employee of the Montreal Company, and addressed to its agents. This circular, less the personalities, forms the sum and substance of the article in the *Trade Review*. I am not disposed to quarrel with Mr. Dwight's circular, far less with the embellishments it has received at the hands of the *Trade Review*. No doubt those gentlemen are satisfied that they have done good service to their masters. I am more than satisfied that they have done yoemen's service to the Dominion Company in furnishing us with an opportunity which we might long have sought for in vain, of meeting our opponents face to face, and of exposing the misrepresentations which, by private circulars and the command of the wires, have been so secretly and diligently spread throughout Western Canada. Before entering upon the main subject, I must allude, passingly, to the attack on Mr. Ryan, a gentleman associated with the Company. That attack is so personal, and reflects so strongly on the character of the party assailed, that I may not attempt in his absence to anticipate the course which he may think it right to pursue for his own vindication. This much I am authorized to say, that the Directors are unaware of anything which would justify them in attaching the slightest credit to the aspersions put forth in the *Trade Review*. To the Messrs. Reeve, also, I shall leave the task of throwing light on their supposed relationship to Mr. Snow, an individual not known even by name to the resident Directors of the Toronto Board. My sole object in entering into print is to clear the Dominion Telegraph Company from the suspicions attempted to be cast upon it, to show that it is no *humbug*, as Mr. *Trade Review* is pleased to suggest, and to expose the real and dishonest design of the writer, while professing to recognize the irreproachable character of such men as McMurrich, Moffatt, Michie and McMaster, to covertly convey the insinuation that they contemplato the perpetration of a *vast swindle* on the public.

We have a right to ask of the public to accept our Prospectus as a plain and honest outline of our scheme, until our actions speak otherwise. In that Prospectus, while giving a sketch of the career of Telegraphy from its infancy on this continent down to this period, when it has assumed gigantic proportions, we have stated our reasons for viewing the present opportunity as favorable to a still further extension of its usefulness in Canada. By way of reply our opponents, those who seek to retain the monopoly of the whole field for the Montreal Company, point to the failure of the Grand Trunk Telegraph Company in 1852.

We deny that there is any analogy in the surrounding circumstances. Then, the telegraph was but occasionally resorted to, now it is in universal request. Then, through the close connection formed between the Western Union of the State of New York and the Montreal, the field was closed against all others. Now, through the more recently established Companies, the Atlantic and Pacific, and the Great Western, with whom we have entered into engagements, the whole field is open to both.

Is the Montreal Company prepared to endorse the allegations put forth by Mr. Dwight, or the imputations cast upon our motives by his backer, the *Trade Review*? Both Mr. Dwight and the *Trade Review* roundly assert that the Dominion Company is simply a second edition of an alleged old swindle, the Grand Trunk Telegraph Company of sixteen years ago, and that the same prominent actor, Mr. Snow, is again at work behind the scenes. We, the Toronto Board, have stated, and repeat the statement, that we are not even aware of the existence of such a personage. It is hinted that Mr. Reeve is a relative of his; of that fact, if it be one, we are ignorant. Nor can it affect the question if it be true. Have we given the Montreal Company any grounds for the charges of bad faith and intended fraud imputed to us by their Agents? Have we, the Board of Directors, the only competent authority which the Dominion Company recognizes, approached the Montreal Company with any propositions that could give color to such charges? Have we attempted to intimidate, or suggested that we were ready to be bought out, or made any proposal of a combination against the public? We have pointed to what we considered objectionable features in the Montreal Company's scale of rates and system of adjustment. Would that be a defensible ground for its attempts to discredit us? On both these points Mr. Dwight, in his circular, confirms our view, for he informs his agents that the Company is about to make a second reduction of rates, lower than ever, and make reforms so as to embrace whole sections of country under a new system of classification. The professed object of Mr. Dwight's circular is thus stated: "It is of course impossible for us to "meet and expose all the extraordinary statements "made by these Agents, and it is hardly necessary for "us to do so, as the truth will in due time appear. In "fact, anxious enquiries are already being made as to "these representations by parties who have through "them, been induced to subscribe for stock. There "are, however, some facts regarding our own Com"pany's affairs, which it is as well you should know, "in order that you may answer intelligently such "enquiries as may be made of you, and inform your "friends whenever called upon to do so." On reading this I fully expected to find matters treated of with regard to which the Montreal Company felt that they had been injuriously misrepresented by the Dominion Company. No such thing. Nearly one half of the circular was devoted to proving that the Montreal Company was not doing half as well as was supposed, and possessed nothing like the capital which had been represented. The pains that Mr. Dwight takes to explain to his agents, in order tha they might be able to explain again how none but the initiated could understand stock quotations is somewhat amusing. By far the larger portion of the sheet is taken up with the Snow story, in order, I suppose, that the Agents might be able to explain it *intelligently* to their friends and the subscribers for Dominion Stock. Much labor is bestowed upon this portion of his circular in order to prove that the Dominion Telegraph scheme is to "all appearance a precisely similar operation." Only one short paragraph is devoted to the subject of rates, explaining what changes and reductions they were about to make, to which I have already alluded. I must not omit to notice another passage in Mr. Dwight's circular, in which he endeavours to connect Mr. Snow with the Dominion Company, and to hold up both in anything but a credible light. He states that early last spring (It must be borne in mind that the Dominion Charter was not obtained till the 25th June, and that the present Board of Directors was not organized till late in July, and issued their Prospectus in August) Mr. Dwight states that early last spring the Montreal Company was approached by Mr. Snow with a proposition that *neither Company should reduce rates*. In whose behalf was Mr. Snow supposed to speak? Surely not the Dominion Company, which came into existence some months later? And yet this impression is most distinctly intended to be conveyed, although Dr. Dwight has not the hardihood to state it in express terms. We learn, however, from Dr. Dwight that Snow is manipulating other companies in the States. Was it in their name that he made the proposition? Nothing more probable than that the companies recently organized in the States should seek to extend their field of operation to Canada, and propose a reciprocity treaty with the Montreal Company, leaving the latter to adjust its own rates. And it is equally certain that such a proposition, if made, would be at once rejected. What! lend a hand to break down monopoly and introduce the wedge for the reduction of rates? However the fact, nothing is more clear than that the Dominion Company, whose central Board was organized in the latter end of July, put forth its Prospectus, announcing its policy of *low* rates, with the view to encourage a more general use of the Telegraph.

Turning to the *Trade Review*, I find several statements, admissions I might call them, to which I wish to call the attention of our subscribers. State No, 1: "We honestly believe in the encourage of anything that will tend to increase telegr facilities, and think that a competition wit existing company, who have a monopoly of facilities, would be desirable."

The question naturally suggests itself here should not the Dominion Telegraph Company l "*anything*" which it is so desirable to enco in order to break down the great monopol there anything in the composition of its B Management calculated to disqualify it fro forming that service to the public. What s *Trade Review* on this point. He enters int detail, and has evidently bestowed pains to himself master of the subject. The portrait gives of the writer is more graphic than fla A worn-out politician—very needy. The clause "but respectable," enables him to pa ter, and the *Review*-er pronounces his fiat t Directors, as a Board, are,, unimpeachable. then it is objected, "their utter ignorance work in hand." Well, there is Mr. Allen, practical operator!—is he a sufficiently good to select the best materials for a good l Would he venture, on his own judgment, to bundle of wire? Mr. Allan owns a fleet of st is he a practial engineer? And yet he is at t of two of the most successful companies on th tinent. What is the reason! He knows how the right man for the right place—to appoin commanders to his ships, competent officers several posts. Mr. Dwight is a very energetic officer in his proper department; little too much zeal, perhaps. I again q *Review*:—"The scheme, so far, has met "cess. A large amount of stock has bee "for, and the chances are that the new lin "built, and a good thing made by some of the stockholders, we confidently believe. H we have these very important facts admitte who writes with no friendly pen. That t monopoly which should be broken up. Th Company in the interest of the public s encouraged. That the Board of Directo Dominion Company is irreproachable, and of men of honor. That so far the scheme as great success, with every probability of its l ried through. I shall not stop to enquire Dwight has been at such pains to unde success, and be-little the standing of his pany. What he has raked up the skelet old Grand Trunk Telegraph Company, ar its foul shroud about the shoulders of t nion Company, to scare away intendin bers. Or why the *Trade Review*, so anxi something and *anything* to break up monopoly, should be so suspicious of th of the irreproachable Board. I shall n with either Mr. Dwight or the *Trade R* giving us the opportunity of having the scheme thoroughly ventilated.

The winding up of the *Trade Review* ar thoroughly marked with good sound s one can readily overlook all else that is irrelevant, or unfriendly. I reiterate hi and address to the stockholders as well as tors—"All we have to say in conclusion i directors owe it to the public, and especi shareholders, who are beguiled into the on the faith of their respectability, to ex than the ordinary vigilance; and if the go on, to call to their aid men of reli practical knowledge." Let the stockho that while they have proved their confide Board, they will expect from them an charge of the duties they have assumed, time a full account of their trust; and le tors show that they are keenly alive to sibilities of their position. It is not i of any man to command success; it is i of every one to deserve it. Your obd't

W. CAYLEY,

No portion of the work has yet been from the contractors, nor will be until it gone a rigid inspection by thoroughly cor ties. The aid of the local board will a in, to see that this inspection is satisfa in their respective districts. The Ins also be required here and there, to take the Montreal Company's line, as a test f to pass nothing which does not, at le to that standard of excellence.—W. C.

TORONTO, Nov. 16, 1868.

DEAR SIR,—In reply to the accusations published in the *Trade Review* of the 13th instant, I am instructed to say that the statements therein contained, that the Secretary, Mr. H. B. Reeve, is a relative and employee of Josiah T. Snow, IS UNTRUE.

That the Secretary has any interest in the Dominion Telegraph Company, (except as asubscriber for shares and a moderate compensation for services), IS ALSO UNTRUE.

That Mr. Martin Ryan was employed by Josiah Snow to work the oracle, or for any purpose, at any time, is ALSO UNTRUE.

That Mr. Snow or his son ever signed any application to the Government to obtain the Charter of the Dominion Telegraph Company IS ALSO UNTRUE.

That Mr. Josiah T. Snow, or his son, are the promoters, or in any way connected with the Dominion Telegraph Company, or ever had at any time any right or authority to negotiate concerning the rates to be established by the Company, is ALSO UNTRUE.

That by a liberal use of stock, the necessary legal authorization was procured, (which means, I suppose, that the stock has been given away,) IS ALSO UNTRUE. Not a single share has ever been allotted or promised for services, or for any purpose whatever. Every subscriber is to pay $50 per share, according to the terms of the subscription.

"Very truly yours,
"H. B. REEVE."

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Nov. 24, 1868.

Since my last, we have had some heavy snow storms, and the sleighing is excellent, both in the city and surrounding country.

The PRODUCE trade has been quiet, and the market is at present in a very uncertain state; the tendency is still downwards. If it were possible to know only a reasonable prospect for a short crop this year, there are plenty of speculators anxious to operate, notwithstanding the many that have been bitten at previous times; but when all the circumstances of the markets have been considered, it is scarcely to be wondered at, that there should be so little spirit in the operations in breadstuffs. Speculators have therefore acted with prudence, and considering the point, that markets over the world have reached, I think, the present decline is not only a necessary action, but taking all things into consideration, *the bottom has not yet been reached.* I know that my ideas may be very unpalatable to your Western readers, but they must accept the situation, and my advice to them is now, as it has been for a good many weeks past—"Hurry forward your produce as fast as possible, whilst prices are high!" The fact is this, that Western farmers have too much relied upon Eastern advices, instead of using their own good sense, and thus making themselves the tools of speculators in the East, who have tried all sorts of *coups* to bolster up prices, and stave off the evil day. Recently prices of flour have rather stiffened owing to the large shipments to Quebec and to the lower ports; though, owing to the present wintery weather, it is doubtful if they will be able to get to their winter quarters. I quote Fancy at $5.40 to $5.50. Strong Supers very weak, the stock being large and the demand light—price $5.20 to $5.25. Supers from western wheat, $5.10; ditto to city brands, $5.05 to $5.10. No. 2, $4.65 to $4.85, with but little demand; this quality is only enquired for, for shipment to the lower ports. Bag flour, which has a large country sale, is worth $2.50 to $2.62½, according to quality. Grain there is very little doing; the receipts of Canal being almost nil, and all sea-going vessels having left the port; the only requirements are for the local trade, or for shipment via Portland. I give you our last quotations—Wheat, U.C. Spring, nominal at $1.12½ to $1.14. Red Winter, $1.16. Peas, no sales; prices nominal. Corn mixed, 83c to 85c. Barley, several bright samples have recently been brought forward and have sold at extreme rates say $1.20 to $1.25. Oats are scarce and stiff at 52c to 53c per 32 lbs. *Provisions*—Pork remains dull; the large importation of hogs from the country, and also from the west, induced by recent high prices, has for the time being broke down our market; barrelled pork, and both live and dressed hogs are very dull of sale, and I would advise the western men not to hurry forward their supplies as I have no doubt but that there will be a reaction in the beginning of the year. Butter rules very high and is likely to continue to do so. A large number of milch cows have been pressed on the market during the summer and fall, and the supply in the agricultural districts during the winter is consequently likely to fall short, so that all descriptions of dairy produce *must* rule high. To a large extent we have to look to the west for our supplies of both cheese and butter, and I therefore think that the making an excellent article would be of great benefit to the farmers. I know you have cheese factories, such as "*Morton's,*" which compete successfully with the English cheese makers, and why should not butter do the same thing.

GROCERIES.—As predicted in my last, the late fall sales went off very dull. The only branch in which there is animation is the fish trade, several sales on the wharf having taken place, and very full prices have been paid. The stocks here and in the West are not large, and consequently prices must remain high. Your Western buyers have been nervous, and must now pay for it. I give you the imports of different leading articles from 1st Jan. to 1st Oct.:

	1867.	1868.
Fruit	2,469,492 lbs.	2,394,671 lbs.
Brandy	147,193 gals.	126,854 gals.
Gin	174,947 "	168,192 "
Rum	28,483 "	32,893 "
Molasses	3,120,513 "	6,372,694 "
Sugar	23,752,895 lbs.	25,601,296 lbs.
Teas	3,457,856 "	2,920,190 "

The market for teas and sugars recently has been very quiet; but, as far as I can learn, the markets in the West, and, to my knowledge, our local ones, are not overstocked, buyers having operated with great caution; so that we may safely look for a fair, steady winter trade.

DRY GOODS and HARDWARE are both very quiet, and now likely to rule so for some time to come, though both have an impetus given them when the winter roads have fairly set in.

The LEATHER TRADE here, as throughout the Province, has fallen considerably short of general expectancy. Prices have advanced, from the short supply of the raw material. I shall give you in my next a full list of prices, but to-day my space, is rather circumscribed.

The BOOT AND SHOE TRADE is one not only of great importance here, but also in Toronto. Here there has been no unusual rush, but business has been steadily and well maintained, the competition has been active, and manufacturers have had to cut down their prices to the lowest possible paying figure, chiefly from the fact that a large amount of inferior stocks had been held over from last spring, which had to be forced off before any new stock could be placed. All fine descriptions of goods were worked off rapidly, and sold at full prices. Prices now, for all sorts, are firm. Montreal must, for many reasons, I think, remain at the head of this branch of manufacture, and my reasons are the following: Our manufacturers possess a large capital, thus enabling them to not only buy up every improvement that can be brought forward in the manufacture of boots and shoes, but also enables them to give time to those who buy from them; a very important feature in every trade. Their assortments of goods are larger than smaller manufacturers can afford to keep, and therefore buyers can have a better selection in their purchases. The most modern improvements in style is carefully consulted and complied with regardless of cost, and last, though not least, they possess the advantage of cheaper labor, that being always more procurable at the centre of a manufacturing point than at the extreme ends. I do not make these remarks so much as a Montrealer as from a general knowledge as to how trade must flow.

The Cotton Crop.

Our reports with regard to the crop contain nothing new this week. Picking has progressed so favorably, that the generally received estimate of the total yield is, in this market, raised to about 2,700,000 bales, the figures we gave several weeks since. There is an evident inclination, at almost all points, to increase estimates though at some of the Atlantic ports, where the receipts will show a decrease, the merchants and planters are rather less sanguine. We hear of no killing frost as yet in any portion of the South.

Annexed is a statement showing the stocks of cotton in Liverpool and London, including the supplies of American and Indian produce ascertained to be afloat to those ports:

	1867.	1868.
Stock in Liverpool...Bales	571,800	426,810
" London	111,184	127,711
American cotton afloat	25,000	35,000
Indian	222,880	272,720
Total	930,864	862,241

Halifax Market.

BREADSTUFFS.—Nov. 17.—Flour still continues to arrive freely from Canada and United States, the supply being equal to the demand. We have no change to note in prices from last week's quotations. Canada No. 1 ranges from $6.25 to 6.50; strong bakers $6.65 to 6.70; extra Canada $7.50 to 8; extra State still continues dull at $6 to 6.40, according to quallity. No. 2 in good demand at $5 to 5.50. Cornmeal without change at $4.50 for kiln dried, and $4.40 for fresh ground. Oatmeal $7.50 to 7.80. Imports from January 1st to November 17th, 1867 and 1868:

	Brls. Flour.	Brls. Cornmeal.
1868.	161,756	42,919
1867.	173,289	33,041

FISH.—Codfish is arriving slowly, and holders are firm at quotations. Fat Mackerel are in request and prices have advanced this week. Herrings quiet. We quote Codfish at $4.15 to 4.25 for good large shore; $3.20 to 3.30 for good small shore; Labrador $2.25 to 2.50. Bank and Bay none. Good hard cure Arichat Haddock $2 to 2.10; Eastern shore $1.80 to 1.90; Western $1.60 to 1.65; Pollock $1.40 to 1.50. Herring in demand at $4.50 for Labrador, and $4 for shore. Mackerel scarce at $13 to 13.50 for No. 1; $11 for No. 2, and $6.75 to 7 for No 3. Salmon $14.15 for No. 1; $12.13 for No. 2, and $9.50 to 10 for No. 3.

OILS.—Cod dull at 50c. No change in seal. Kerosene, 44c. for American.

PRODUCE.—Butter continues steady at 24c. for good dairy; 23c. for shipping. Lard without change. Oats, 55 to 60c. for P. E. I. prime mess. Canadian white nominal.

PROVISIONS.—Pork has been arriving from the Island, and sales made at auction yesterday at $22.25 for mess, and $17.75 for P. E. I. prime mess. Beef dull and unchanged.

WEST INDIA PRODUCE.—Sugars and Molasses remain without change. Porto Rico, 6¼ to 6⅜c.; Barbadocs, 5¾ to 5¾c.; Cuba, 5½ to 5¾c.; Centrifugal Cuba, 6c. in bond. Rum scarce and in demand at 65 to 67½c for Demerara, and 57½ to 60c for St. Jago.

FINANCIAL.—Bank drawing rate on London 60 day sight bills 13 per cent. prem.; private 12 to 12½ per cent prem. New York Gold drafts at sight 3½ per cent. prem. Curreney drafts 22 per ceut. discount. Montreal sight drafts 3½ per cent. prem. Newfoundland sight drafts 5 per cent. prem.

Toronto Market.

GROCERIES.—*Sugars.*—Are firm; prices of both raw and refined are again higher as quoted. *Teas.*—There has been a considerable movement of fine greens to the American market at full prices. *Fish.*—Are still scarce and firm.

BOOTS AND SHOES.—Trade is good, but not quite so lively as for the past two or three weeks. Retailers are meeting their engagements very fairly. Altogether the country dealers seem to be in a better position, and are likely to do a better trade the coming winter than for the past two years.

GRAIN—*Wheat*—Receipts 9,430 bush., and 15,000 bush. last week. Fall wheat has met with a good demand, and about 20,000 bush. changed hands at prices ranging from $1.18 to $1.24. There are now no stocks in market. Several cars of Spring sold at $1.07 to $1.09, and holders now ask $1.06 to 1.10, with buyers at $1.04 to $1.05. An exchange points out the fact that the crop of the Western States is being held back this year to a greater extent than ever before. The receipts at the five principal western lake ports from the 1st of January to the 14th Nov. this year were 29,000,000 bushels, being about two millions bushels more than last year, and twelve millions larger than in 1866. The stock in store in Buffalo on the 23rd Nov. was 377,000 bushs., on the 16th 371,000 bushs., against 114,000 bush. in 1867, and 178,296 bushs. in 1866. *Barley.*—Receipts by cars, 3,794 bushs., nd 6,000 bushs. for the previous week. Shipments for the week ended Saturday last, 31,966 bushs., and 32,000 bush. the previous week. Total shipments by lake since the commencement of the season, 680,000 bushs. There is a good demand and little offering, and the market is higher. There are buyers at $1.28 to 1.30 and few sellers. *Oats.*—Receipts by cars, 3,600 bushs., and 6,100 bushs. last week. A cargo of Chicago oats arrived during the week, per schooner *Jno. Weedon.* Car loads of Canadian are selling at 51 to 52c. *Peas.*—Receipts by cars, 900 bushs., and 350 bushs. last week. Market dull. Car loads offering at 85 to 88c.; no sales.

FLOUR.—Receipts 1,622 brls., and 1,500 brls. last week. There is some demand for superfine, and sales of two or three lots occurred at $4.75. A lot of extra sold at $5.40. Nothing doing in other grades.

PROVISIONS.—*Butter*—There is a good enquiry for round lots of butter at 23½ to 24c.; holders asking 25c.; no sales. Rolls sell at 23½ to 24c. *Dressed Hogs*—In fair supply and selling readily at quotations. *Lard*—Firm at quotations. Little doing in other provisions.

The Gore District Mutual Fire Insurance Company

GRANTS INSURANCES on all description of Property against Loss or Damage by FIRE. It is the only Mutual Fire Insurance Company which assesses its Policies yearly from their respective dates; and the average yearly cost of insurance in it, for the past three and a half years, has been nearly

TWENTY CENTS IN THE DOLLAR

less than what it would have been in an ordinary Proprietary Company.

THOS. M. SIMONS,
Secretary & Treasurer.

ROBT. McLEAN,
Inspector of Agencies.

Galt, 25th Nov., 1868. 15-1y

The Waterloo County Mutual Fire Insurance Company.

HEAD OFFICE: WATERLOO, ONTARIO.

ESTABLISHED 1863.

THE business of the Company is divided into three separate and distinct branches, the

VILLAGE, FARM, AND MANUFACTURES.

Each Branch paying its own losses and its just proportion of the managing expenses of the Company.

C. M. TAYLOR, Sec. M. SPRINGER, M.M.P., Pres.
J. HUGHES, Inspector. 15-yr

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Company.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the North-western States, and through to California.

ÆTNA

Live Stock Insurance Company

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1863.

At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1863.

HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1863.

A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

E. L. SNOW, GENERAL AGENT,
Montreal.

5 King Street West.
Toronto, 1863. 38-1y

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG.:
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

aug 15-1yr

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing,—I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern*:..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.
Toronto, Dec. 3. 1867. 16-1y

Life Association of Scotland.

INVESTED FUNDS

UPWARDS OF £1,000,000 STERLING.

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS

Are applied on a special system for the Policy-holder's

PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,

WITH THE OPTION OF

LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains

A LARGE REDUCTION OF PRESENT OUTLAY

OR

A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,

Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in tact for Policy-holder's heirs, or other purposes.

Accumulated Fund, $2,000,000, *Income*, $1,000,000.

THIS Company, established in 1851, is one of the most reliable Companies doing business in the country, and has been steadily prospering. The *Massachusetts Insurance Reports* show that in nearly all important matters it is superior to the general average of Companies. It offers to intending assurers the following reasons, amongst others for preferring it to other companies:

It is purely Mutual It allows the Insured to travel and reside in any portion of the United States and Europe It throws out almost all restriction on occupation from its Policies. It will, if desired, take a note for part of the Premium, thus combining all the advantages of a note and all cash company. Its Dividends are declared annually and applied in reduction of Premium. Its Dividends are in every case on Premiums paid. The Dividends of the PHŒNIX have averaged fifty per cent. yearly. In the settlement of Policies, a Dividend will be allowed for each year the policy has been in force. The number of Dividends will always equal the outstanding Notes. It pays its losses promptly—during its existence never having contested a claim. It issues Policies for the benefit of Married Women beyond the reach of their husband's creditors. Creditors may also insure the lives of Debtors. Its Policies are all *Non-forfeiting*, as it always allows the assured to surrender his Policy, should he desire, the Company giving a paid-up Policy therefor. This important feature will commend itself to all. The inducements now offered by the PHŒNIX are better and more liberal than those of any other Company. Its rate of Mortality is exceeding low and under the average.

Parties contemplating *Life Insurance* will find it to their interest to call and examine our system. Policies issued payable either in *Gold* or American currency.

PROSPECTUS

OF THE

DOMINION EXPRESS COMPANY OF CANADA

ORGANIZED UNDER THE JOINT STOCK COMPANIES' ACTS.

CAPITAL STOCK, ... $1,000,000,

In $10,000 Shares, $100 each.

It is proposed to organize a DOMINION EXPRESS COMPANY, to meet the present and prospective demand for increased facilities of general transportation. It is the interest of Canadians to do their own work, and *accumulate* cash capital, and *one* of the objects of this scheme is the retention in this country of the profits arising from the business done.

Express Companies obtain "four-fifths" of their business from merchants and bankers, and no reason exists why they cannot transport their own goods, by their *own Agents, economically* and *efficiently*, and by a *union of capital* and *effort*, they hereby resolve so to do. Being thus united, and pledging to it their business and influence, secures to this Company certain and complete success.

This organization, like the mail system, is to extend, under *one general management*, to all cities, towns and villages in the Dominion, and to connect with all parts of the United States, and being but "one Company," will secure *unity, despatch* and *accuracy*.

It is proposed to distribute the stock widely, throughout the Dominion, in limited sums, apportioned as nearly as practicable to the business of the subscribers. The capital Stock of the Company to be not less than $1,000,000, in 10,000 shares of $100 each.

Ten per cent. of the stock subscribed will be required to be paid after the subscription shall have reached the sum of $250,000, and after a Charter shall have been obtained, of which due notice will be given to the subscribers ; the subsequent calls, not exceeding *ten per cent. at any one time*, to be made at convenient intervals, as the demands on the Company may require. But the aggregate of all calls to be made will, it is believed, not exceed *sixty per cent.* of the Capital Stock.

The business to be done strictly on *cash principles*. With a paying business assured from the start, by *interested* and *reliable* Stockholders, it will readily be seen that a small per centage *only* of the subscriptions will be required to put the Company in working order, and it is confidently and reasonably believed that the receipts will thereafter maintain and extend it. And in order to secure an equitable voice in its management, the principal commercial centres will be represented at the Board, by Directors recommended by Stockholders of their own localities, who will also recommend to the Direction the Local Agents, and thus secure a general influence in its management, as well as its business.

All Express enterprises, both in this country and the United States, have been decidedly successful, resulting from the profits of the business itself; and having an organization and a share list—such as are now proposed—with energy and economy in the direction, no doubt can be entertained of the most satisfactory results.

With such prospects, the Merchants of the Dominion, Capitalists and others interested in the success of this enterprise, are invited to become Stockholders.

The following shall be included in the By-Laws to be hereafter framed for the Government of the Company:

1. The Company shall be known by the name or title of "THE DOMINION EXPRESS COMPANY OF CANADA."
2. The Capital Stock of the Company shall be *One Million of Dollars*, divided into *Ten Thousand Shares of One Hundred Dollars each.*
3. Each Shareholder shall be liable only for the amount of Stock subscribed by him, her, or them.
4. The Shares of Stock of the Company shall be transferable; but no transfer shall be valid without the consent of the Directors, in writing, unless said shares shall be paid up in full.
5. It shall be lawful for the Stockholders, so soon as the sum of two hundred and fifty thousand dollars shall have been subscribed, to call a General Meeting of the subscribers, to be held at the office of the Company, in the City of Montreal, and proceed to elect nine qualified persons to be Directors of the Company, each of whom to be a proprietor of not less than ten Shares of Stock of the said Company, and three of whom shall form a quorum, with all the powers of the Directors. The said Directors shall also, at their first General Meeting, elect a President, Secretary, Treasurer, and General Superintendent or Managing Director, from amongst themselves.
6. The said Directors so elected shall proceed, without delay, to frame all necessary By-laws to govern the Company, and shall have power to alter and amend the same as circumstances may require.
7. The Directors shall not have power either to *sell out* the said Company to any other Express Company or organization now in existence, or hereafter to be incorporated, or to amalgamate with any other Express Company.
8. No Stockholder shall be at liberty to hold in his, her, or their name, more than one hundred shares of the Capital Stock of the said Company, without the consent of the Directors, in writing, first having been obtained.

PROVISIONAL DIRECTORS.

MESSRS. IRA GOULD,
WALTER MACFARLAN,
VICTOR HUDON,

MESSRS. WM. McNAUGHTON,
DUNCAN MACDONALD,
JOSEPH BARSALOU,

MESSRS. ALEXANDER McGIBBON,
GEORGE HEUBACH,
J. T. KERBY.

OFFICERS.

PRESIDENT: WALTER MACFARLAN.

VICE-PRESIDENT: WM. McNAUGHTON.

TREASURER: JOSEPH BARSALOU.

SECRETARY: GEORGE HEUBACH.

MESSRS. CARTIER, POMINVILLE, & BETOURNAY, SOLICITORS.

J. T. KERBY, GENERAL AGENT.

The following are among the prominent firms in Montreal who have subscribed to the original Stock List at the formation of the Company:—

Messrs. Ira Gould, President Corn Exchange.
" Walter McFarlan, (Messrs. Walter McFarlan & Baird).
" James Donelly, Wholesale Dry Goods.
" Luke Moore, (Messrs. Moore, Lemple & Hatchette).
" Duncan Macdonald.
" A. Shannon & Co., Wholesale Grocers.
" Lewis, Kay & Co., Wholesale Dry Goods.
" George Brush, Eagle Foundry.

Messrs. W. McNaughton, Messrs. Sincennes & McNaughton.
" A. W. Ogilvie & Co., Glenora Mills.
" Benning & Barsalou, Auctioneers.
" Alex. McGibbon, China House.
" T. Baillie & Co., Wholesale Dry Goods.
" Alex. Walker, Wholesale Dry Goods.
" Geo. Winks & Co., Wholesale Dry Goods, Albert Buildings.
" W. P. Ryan, M.P.
" Victor Hudon & Co., Wholesale Grocer.

Messrs. Boyer, Hudon, & Co.
" Z. Benoit, Wholesale Merchant.
" Evans & Evans, Wholesale Hardware.
" James Smith, M.P.
" Andrew Watson.
" A. Freeman & Co.
" John Rh[illegible]nas.
" Cartier, Pominville & Betournay, Solicitors.
" Cassels & Cameron, Wholesale Dry Goods.
" Ferrier & Co., Wholesale Hardware.

TWENTY-THIRD ANNUAL REPORT

OF THE

NEW YORK LIFE INSURANCE COMPANY

Accumulated Capital, over $10,000,000. - - Divisible Surplus, Jan. 1, 1868, $1,642,425 59

Annual Statement, January 1st, 1868.

AMOUNT OF NET CASH ASSETS, January 1st, 1867		$6,727,816 65
AMOUNT OF PREMIUMS RECEIVED DURING 1867	$3,104,051 34	
AMOUNT OF INTEREST RECEIVED AND ACCRUED, INCLUDING PREMIUMS ON GOLD, &c.	487,339 94	
		3,591,391 28
		$10,319,207 93

DISBURSEMENTS.

Paid Losses by Death	$561,921 45	
Paid for Redemption of Dividends, Annuities, and surrendered and cancelled Policies	485,851 36	
Paid Salaries, Printing, Office and Law Expenses	98,032 55	
Paid Commissions and Agency Expenses	333,207 43	
Paid Advertising and Physician's Fees	46,518 77	
Paid Taxes and Internal Revenue Stamps	19,291 26	
		1,544,861 92
		$8,774,326 01

ASSETS.

Cash on hand, in Bank, and in Trust Company	$575,236 54	
Invested in United States Stocks, (Market value, $3,150,506 87) cost	2,978,907 49	
Invested in New York City Bank Stocks (Market value, $45,855), cost	41,549 00	
Invested in New York State Stocks (Market value, $836,050), cost	806,306 60	
Invested in other Stocks (Market value, $151,225), cost	149,337 01	
Loans on Demand, secured by U. S. and other Stocks, (Market value, $311,497)	257,700 00	
Real Estate (Market value, $709,125 66)	528,234 53	
Bonds and Mortgages (Secured by Real Estate, valued at $2,260,000)	1,072,800 00	
Premium Notes on existing Policies, bearing interest	1,556,837 47	
Quarterly and semi-annual Premiums due subsequent to January 1, 1868	346,285 81	
Interest accrued to January 1, 1868	52,402 83	
Rents accrued to January 1, 1868	2,401 96	
Premiums on Policies in hands of Agents and in course of transmission	406,326 77	
		$8,774,326 01
And excess of market value of securities over cost		385,427 90
Cash Assets, Jan. 1, 1868		$9,159,753 91

LIABILITIES OF THE COMPANY.

Amount of Adjusted Losses, due subsequent to Jan. 1, 1868	$134,800 00	
Amount of Reported Losses awaiting proof, &c.	38,214 32	
Amount reserved for Re-insurance on existing Policies (valuations, Carlisle table four per cent. interest, net premium)	6,283,635 49	
Return Premium, declared prior to 1866, payable on demand	72,572 51	
Return Premium, 1866 (now to be paid)	422,638 00	
Return Premium, 1867 (present value)	565,468 00	
		$7,517,328 32
Divisible Surplus		$1,642,425 59

During the Year, 6,597 Policies have been issued, insuring $22,541,940.

The Progress of the Company for the Past Four Years will be seen in the following Statement:—

	Assets.	Increase of Assets over previous year.		Assets.	Increase of Assets over previous year.
1864	$3,658,755 55	$1,005,217 63	1866	6,727,816 65	1,845,896 95
1865	4,881,919 70	1,223,164 15	1867	8,774,326 01	2,046,509 36
		Total increase	$6,120,788 69.		

One of the special features of this Company is the TEN YEAR NON-FORFEITURE PLAN.

The system popularly termed "The Non-Forfeiture Plan," was originated and first presented to the public by this Company, in their well-kn "TEN YEAR NON-FORFEITURE POLICY," in the year 1860; and its perfect adaptation to the wants of every class in the community, obvi every reasonable objection to Life Insurance, is shown from the fact that every other American Company has been compelled, in deference to p opinion, to adopt it, although in many cases it is done in such a way as considerably to impair its value. It has received the *unqualified approval o best business men of the land*, large numbers of whom have taken out policies under it, simply as an investment.

By the Table on which this class of Policies is based, a person incurs no risk in taking out a policy. Insuring to-day for $10,000, if he should die to-morrow, the $1 immediately becomes a claim; and if he shall live ten years, and make ten annual payments, his policy will be paid for, and his dividends *still continue*, making

HIS LIFE POLICY A SOURCE OF INCOME TO HIM WHILE LIVING.

By the specific terms of these policies, and not by vague and indefinite statements made in circulars, a party after the second year does not forfeit what he has paid in prem Thus, if one insuring by this plan for $10,000 discontinues after the second year, he is entitled to a PAID-UP POLICY, according to the number of full years paid in, as follow

Second year, two-tenths of $10,000 (amount insured), amounting to.. $2,000 | Fourth year, four-tenths of $10,000 (amount insured), amounting to.. $4,000
Third year, three-tenths of $10,000 (amount insured), amounting to.. 3,000 | Fifth year, five-tenths of $10,000 (amount insured), amounting to.... 5,000

And so on, until the tenth annual payment, *when all is paid*. The paid up policies, for the proportionate partial payments, as well as for the full amount, participate Dividends of the Company during the whole existence of the policies. ☞ This being a purely mutual Company, ALL ITS PROFITS ARE DIVIDED AMONG THE ASSU

MORRIS FRANKLIN, PRESIDENT.
WILLIAM H. BEERS, VICE-PRES'T & ACTUARY.

Mining.

PLUMBAGO.

Among the the most refractory substances in nature is the mineral plumbago, which is called black lead, graphite, and carburet of iron. Its name, plumbago, is derived from the Latin "plumbum ago," meaning, "I act like lead;" the name carburet of Iron is more appropriate, as the mineral consists of ninety odd per cent. of carbon, and a fair per cent. of iron. The Brazilian plumbago, however, is pure carbon. It is quite soft, has a specific gravity of 2.09, a metallic lustre, a shining streak, and an iron-black to steel-gray color. It is opaque, soils paper, and feels greasy. When of laminated structure, its laminæ are flexible; but it also occurs massive and granular. Its regular crystal form is a rhombohedron, but hexagonal tabular crystals are also found. It burns at a high temperature, without flame or smoke; is insurable before the blow-pipe, and not affected by acids. Its geological position is in the primary rocks or altered rocks lying at the base of the palæozoic series. It is mostly disseminated in calcareous or argillaceous shales. Extensive formations of plumbago occur in the Laurentian series of rocks in the north-eastern part of the State of New York, near the head of Lake Champlain, at Ticonderoga, Lake George, and in the range across the lake in Canada West; in the metamorphic region of Massachusetts, at Sturbridge. In the gneiss of North Carolina there is an extensive formation; large blocks have been quarried from this locality a few weeks ago. England boasts of the first known and best locality, at Borrowdale, in Cumberland, discovered in the year 1564, during the reign of Queen Elizabeth. It is found there in a greenstone rock, in nests and beds of clay. From the date of this discovery, a new epoch in the industrial operations of domestic economy was opened; and its importance was manifested by the mandate of the English Government prohibiting the exportation of graphite. In Bavaria, Germany, and Bolivia large deposits have been worked, Ceylon has furnished immense quantities of the best laminiated graphite. In addition to those above mentioned, the United States furnishes many localities, among which we may mention Morristown, N J., Concord, N. H., Brandon, Vt., Amity and Hillsboro, N. Y. An extensive deposit has been lately discovered near Saco, Me. California has exported a thousand tons of superior graphite. Greenland, Spain, Mexico, Norway and Siberia have of late years supplied the world with excellent material. Canada has furnished beautiful specimens of laminated graphite from Burgess and Grenville, and much of it has been disposed of in this market. Other localities could be mentioned where plumbago has, from time to time been obtained in greater or less abundance. New York, Ceylon, Siberia and Bavaria are, however, the main sources of supply.

The principal uses made of plumbago in the arts are as follows:

The lead pencil, made from the best quality of graphite, has contributed more to the spread of the arts and sciences in modern times than any other article that can be mentioned among the contrivances in daily use. The black lead crucible is of immense benefit to the brass-founder, assayer and steel manufacturer. Graphite is valuable as a lubricator, to prevent friction in machinery, the journals of engines, etc. To impart lustre to iron, especially stoves. In the process of electrotyping or depositing metals by galvanism, this material is useful to coat the wax of the moulds, and render it a conductor of the electric current. In the manufacture of green glass wine bottles, called hock bottles. In the manufacture of gunpowder, for glazing the grains. For "facing" in iron foundries. For lubricating the action in pianofortes.

The discovery of the Borrowdale mine, in Cumberland, dispelled all other contrivances for writing, and the manufacture of lead pencils became quite universal. The mineral, as it came from the mine, was sawed into thin slabs and these again into long strips of the requisite size, which were, without further preparation, glued into the wood. These pencils are not surpassed in delicacy or smoothness, and to this day are made in the same manner as they were three hundred years ago. The black lead mine at Borrowdale had a yearly revenue of £40,000 sterling, from the monthly public sales. The mine was only allowed to be open six weeks in a year, that the market might not be overstocked. This great mine is now exhausted, and nothing but impure refuse is obtained from that celebrated locality. English manufacturers and men of science, have been searching for new supplies, but the discoveries in Spain, Ceylon, Greenland, California, France, Italy, Canada and the Atlantic States, made from time to time, have not yet produced a complete substitute for the Borrowdale mineral. Long before the final exhaustion of that mine, processes were invented for cleaning and refining the impure refuse which had been cast away, and improving coarser and less valuable minerals by its use.

In this way, although the Borrowdale lead could not be had in its palmy days, for less than $10, gold, per pound, many manufacturers could obtain fair materials for 10 cents per pound.

It is, however, a remarkable fact that the Borrowdale graphite owed its fine quality rather to its peculiar style of aggregation than to its purity, as it was ascertained to contain more foreign matter than Ceylon and Canadian graphites. The attempts to refine and clear the impure graphite were carried on by the English mechanics, BRODIE and BROCKEDON, who contrived methods of overcoming the difficulties of the case. BROCKEDON was long occupied to render the powdered graphite coherent by submitting it to enormous pressure. It operated in vacuo, and the difficulty of introducing apparatus under the receiver of an air-pump was avoided by an arrangement of simple character. The powdered graphite was compacted by moderate pressure, and enclosed in very thin paper, which was glued over the whole surface, except a small hole for the air to escape from within. The block thus prepared was placed under an exhausting receiver, the air removed, and the orifice closed with a small piece of paper; and in this state it was left for twenty-four hours. It was then submitted to a regulated pressure once more; the different particles become agglomerated, and a black graphite was produced as solid as the natural mineral.

In 1795 an important discovery was made in France, which proved a great success, and has

become the basis of the present manufacture of pencils. It was the admixture of fine clay with the purified graphite; it not only restored to the graphite the necessary consistency, without materially diminishing the writing qualities, but also any degree of hardness or softness, a result that could not be obtained from the pure Borrowdale. The German black lead has been used for a century past in the manufacture of crucibles and for small furnaces for assayers and chemists, while the finest varieties of graphite for pencils have been furnished from Cumberland and Siberia. The Ceylon and German, as likewise the Ticonderoga graphite furnish the sole material for crucibles. All other localities yield materials for lustres, lubricators and other purposes. Argillaceous matters are not prejudicial to the manufacture of crucibles; but the presence of carbonate of lime is very objectionable, since the lime forms a fusible compound at the great heat to which the crucibles are exposed, and the object is defeated.

The German Bavarian crucibles, which stood in high estimation for centuries past, are composed of very impure materials, not half of their constituents containing black lead; while the American crucible, first introduced in the United States by that pioneer, JOSEPH DIXON, contains nearly three parts of black lead and one part clay. He began manufacturing the black lead crucibles in 1837, and drove the triangular pots out of this market. This firm consumes at the present day more plumbago than any other one concern in the world. Their crucibles are now introduced all over the civilized world, where the precious metals, steel, or alloys, as brass, German silver, are made or melted. They consume 40 tons of it per week; they procure their supplies principally from Ceylon and Ticonderoga, in New York. The consumption of crucibles for pyro-chemical operations is very considerable; I saw last year, in Pittsburgh, in one establishment, 200 large black lead crucibles, in the furnaces at the same time; considering the number of ten or twelve crucible manufactories in the United States, the amount of plumbago consumed in the country cannot be less than 10,000 tons per annum. This quantity of graphite is not used up for the manufacture of crucibles alone, a very large amount is wanted for the lustre, so-called British or Mexican lustre, which forms a very considerable branch of industry; there are no less than fifty manufacturers of lustre in the United States, of which DIXON & Co. put up 150 gross, or 20,000 packages of the lustre per day. Large establishments exist in Philadelphia, Boston, Cleveland, and in New York, so that we may compute the amount manufactured in the U. S. at 1,000 gross per day.

In conclusion, a few remarks on the great American locality of graphite situated at Ticonderoga, may give an idea of the extent to which this branch of industry is now carried on. The mining property of the American Graphite Company is comprised in the Arthur and Joes Mountains, at Ticonderoga, on Lake Champlain, and at Warrensburgh, on Lake George; the latter contains veins of the granular or compact graphite, which, after having been purified, furnishes excellent pencil lead, while the Ticonderoga mines have only the foliated graphite containing disseminated carbonate of lime, which requires to be concentrated by proper machinery. This is done in the most practical manner, so that from five to ten tons per day are forwarded ready for crucible-makers. Not less than 150 veins or deposits have already been discovered; some of them have been worked to the depth of several hundred feet; parallel veins are constantly discovered at a distance of 12 feet.—*American Journal of Mining.*

— Mr. E. A. C. Pew has purchased 1,400 acres of Peat land, in the County of Welland, for a joint stock Company about being organized. It is to be called the Ontario Peat Company. It is stated that Peat can be manufactured and put on the bank of the Welland Canal for $1 per ton.

THE NEW MINING ACT.

We give below the most important clauses of the new Act relating to mining, now before the Legislature of Ontario.

3. All Royalties, Taxes or Duties which by any patent or patents heretofore issued, are reserved, imposed or made payable upon, or in respect of any ores or minerals extracted from the lands granted by such patents, and lying within this Province, are hereby repealed and abandoned, and such lands, ores, and minerals shall henceforth be free and exempt from every such Royalty, Tax or Duty.

4. All reservations of gold and silver mines contained in any patent or patents heretofore issued, granting in fee simple any land or lands situate within this Province, are hereby rescinded and made void, and all such mines in or upon any such lands shall henceforth be deemed to have been granted in fee simple as part of such lands, to the subsequent and present proprietors or owners thereof in fee simple.

5. No reservation or exception of gold, silver, iron, copper, or other mines or minerals, shall hereafter be inserted in any patent from the crown granting any lands in the Province known as mining lands.

6. Any person or persons may explore for mines or minerals in any unsold Crown lands, surveyed or unsurveyed, not in the actual use or occupation of the Crown or of any public Department, and not under lease or license from the Crown or the Commissioner of Crown Lands, and not for the time being marked or staked out and occupied as hereinafter mentioned.

7. Crown Lands supposed to contain mines or minerals may be sold as mining lands, or may, when situate within any mining division, be occupied and worked as "Mining Claims," under miners' licenses, as hereinafter provided.

8. Such lands, so sold when situate in unsurveyed territory, or in townships surveyed in sections, shall be sold in blocks to be called "Mining Locations."

9. Mining Locations under this Act shall conform to the following requirements:

1st. In the unsurveyed lands in the Territory to the north or north-west of the River Mattawa, Lake Nipissing and the French River (and which includes the territory bordering with Lakes Superior and Huron, and the River St. Mary), every regular Mining Location shall be rectangular in shape, eighty chains in length by forty in width, containing three hundred and twenty acres, and the bearings of the outlines of each location shall be due north and south, and due east and west astronomically, the length to be run north and south.

2nd. When a Mining Location in the unsurveyed lands in the territory aforesaid borders upon a lake or river, an allowance of one chain in width shall be reserved along the margin of such lake or river, and the width of the location shall front on said road.

3rd. In the Townships in said territory surveyed, or hereafter to be surveyed in sections, every Mining Location, after such survey, shall consist of half of a section, divided by a line run north and south, except when the section borders on a lake or river, when the section shall be divided north and south, or east and west, whichever will give the narrowest frontage on such lake or river.

4th. In all patents for such Mining Locations in the territory aforesaid, there shall be a reservation for roads of five per cent. of the quantity of land professed to be granted.

5th. In the unsurveyed lands not situate within the limits of the territory aforesaid, Mining Locations shall be, as may be defined by any Order in Council hereafter to be made.

10. Mining Locations in unsurveyed territory shall be surveyed by a Provincial Land Surveyor, and be connected with some known point in previous surveys (so that the tract may be laid down on the office maps of the territory in the Crown Lands Department), at the cost of the applicant who shall be required to furnish with their application the surveyor's plan, field notes and descriptions thereof, showing a survey in accordance with this Act, and to the satisfaction of the Commissioner of Crown Lands.

Section 12 provides that patents shall contain a reservation of pine trees; 13, that mining divisions may be declared by Order in Council; 14, that an Inspector shall be appointed for each division, with power to settle disputes as to claims, &c., summarily; 16, that the Inspector shall issue miners' licenses; 17. that a miner's license shall be in force one year, have only one person's name therein, and not be transferable, but may be renewed; 19, that the licensee shall have the right to stake out and work a mining claim.

20. Each mining claim shall be of the following dimensions, viz:

For any one person, two hundred feet along a vein or lode, by one hundred feet at each side thereof, measuring from the centre of the vein or lode.

Companies of two or more persons, who shall hold a miner's license, may take out and work additional feet along a vein or lode by the same width in the proportion of one hundred additional feet in length to every additional miner, but not exceed one thousand feet in length altogether to work the claim jointly.

21. Mining claims shall be laid out, as nearly as possible, uniformly, and in quadrilateral and rectangular shapes; measurements of all mining claims shall be horizontal; and the ground included in every such claim shall be deemed to be bounded under the surface by lines vertical to the horizon.

22. A mining claim shall be deemed to be forfeited and abandoned, and to be open to location by any licensee, or subject to any sale granted by the Crown, when the same shall have remained unworked for the space of two weeks, unless illness or other reasonable cause to the satisfaction of the Inspector for the division be shown in case the licensee has neglected or failed to comply with the requirements of this Act, and the regulations to be made under it, or has not renewed his license.

23. No person shall occupy at the same time more than one mining claim on Crown lands, except in the cases hereinafter provided for, registration of claims rendered temporarily unworkable.

25. The discoverer of any new mine shall be entitled to two mining claims of the size described by this Act, or by any regulations that may be issued under it and in force when the discovery may be made: provided that such discovery shall have been immediately reported to the Inspector of the division; and any person immediately reporting such a discovery, shall be allowed to mine on any Crown Land for a year.

26. No person shall be considered the discoverer of a new quartz mine, unless the place of the alleged discovery shall be distant, if on the same vein or lode, at least three miles from the nearest known mine on the same vein or lode, and one mile at right angles from the course of the nearest known vein or lode.

30. Any person occupying a mining claim on Crown Lands, which, in consequence of want of water or other unavoidable reasons satisfactory to the Inspector for the division, cannot be profitably worked, may, upon payment of one dollar, register his right to such claim in the office of the Inspector for the division, in a book to be kept for that purpose, and may then proceed to any other claim where; but in case such person do not return to occupy the claim so registered, within one month after the surrounding claim or claims

wn to be workable, he shall forfeit all right and
e to said claim; provided that every person so
stering a claim shall be held to plant a wooden
ron picket in the centre thereof as possible,
n which shall be cut or painted, in legible
res, the registration number of said claim.

4. The Lieutenant-Governor in Council may,
n time to time, make all and every such regu-
ion and regulations as he may deem necessary
expedient, for the appointment of Arbitrators
Mining Boards to hear and determine appeals
the decisions of Inspectors of Divisions, and
the prescribing, defining and establishing the
ers, duties, and mode of procedure of such
itrators or Mining Boards; for the construction
maintenance of roads through the Mining
isions, and generally for the purpose of carry-
out this Act; and such regulations, after pub-
ion in the *Ontario Gazette*, shall have the
e and effect of law.

Insurance.

RE RECORD.—Askin's tavern in the township
erby, about nine miles west of Owen Sound,
destroyed by fire on the 27th ult. A child,
ung woman and a man were burned to death,
e six others, including the father and mother
e proprietor, were so severely injured that
e or no hopes are entertained of their recovery.
uthampton, Nov. 24.—Akins' hotel situated
t 14 miles from this place, took fire at two
ck this morning and was destroyed. Two
were burned to death, and the proprietor
two others were so badly injured that they
ot expected to recover.
ratford Dec. 1.—About one o'clock this morn-
g fire broke out in Messrs. W. &. J. Work-
s iron house, and the stables of A. T. Argo,
e rear of Messrs. Workman's hardware store,
the American and Canadian Express office.
stable and iron house were entirely destroyed,
or an hour or more the brick block, from the
on hotel westward, was in imminent danger,
by the exertions of the firemen and citizens
re was prevented from spreading.
John, Nov.—A fire was discovered in the
of Mrs. N. Disbrow, Wellington Row. It
speedily suppressed before much damage was
ne.
nton, Dec. 2.—A serious fire occurred at
place; full particulars not yet received.
monte.—Some further particulars of the
re at this place have come to hand. Three
ings owned by J. Hearvey of Ottawa were in-
for $4,000:—"A part of the large mill was
ied by Levi C. Northup, as a grist mill; a
by Bragg and Northrop, cloth manufacturers;
third part by W. Tennant & Co., also in the
business. Northrop's stock in the grist
was insured for $1,000, which will not cover
ss. The loss of the firm of Bragg & North-
must be very heavy, they being insured for
,000, and having lost all their machinery,
the exeeption of one loom. W. Tennant &
ost all their machinery, upon which their
no insurance, their estimated loss being
0. The machinery owned by Gilbert North-
the shingle mill, was all safely removed.
household furniture would received some
e by being so hastily taken out, but upon
has an insurance. The fire is supposed to
originated from the stovepipes in the second
d story.

MINE RECORD.—Quebec, Dec. 1.—An upper
barge, from Kingston to this port, with
30 bushels of wheat for Ross & Whithall,
ived on Sunday, when tide ebbed she grounded
starboard side, drew from cross beams and
large opening, into which the return tide
ed, damaging the whole of her cargo. The
ll amount $6,000. No insurance.
A cable despatch announces the loss of the ship
Flowing,' which sailed from Quebec for Liver-
pool on the 26th October, with a cargo of timber and phosphate of lime. Her owners, Irving & Webster, had the ship fully insured by shippers D. D. Young & Co., in the Quebec Marine Insurance Company.

OWEN SOUND, Nov. 29.—The steamer Francis Smith went on shore near Byng Inlet last Wednesday, on her way to Byng Inlet. She had a load of hay and provisions for the mills there. The crew came to Owen Sound this morning by the steamer Bonnie They were unable to get her off. They say she is damaged a great deal. They filled her with water to make her lay easy. Loss estimated at $50,000 insured for $20,000 to $25,000 in the Phœnix, British American, Provincial, and we think another office.

CLEVELAND, Nov. 28.—The steamer Boston is reported to have been sunk in Lake Michigan by the steamer Milwaukie. They are both of the Northern Transportation Company's Line. There are no lives lost.

Montreal, Nov.—The schooner 'Indian Queen,' bound for Picton to the Moisie, with a cargo of coals for Mr. Molson, was lost going into the Moisie River on the 11th inst. She will be a total loss, only three feet of her stern being visible at low water. Crew saved. Molson's steamer, employed at the mines, broke adrift during the gale and was rescued with great difficulty. Several scows were lost at the same time, which were employed in carrying sand to the mines.

— The steamers Grecian and Magnet are going into dry dock for the winter—the former to repair damages sustained in the collision near Kingston, and the latter to have a new engine and boilers put in.

— The Life Association of Scotland is about erecting a splendid stone building on the Place d'Armes, Montreal. The demolition of a portion of their former offices by the City Corporation in widening Little St. James Street, has rendered the erection of new offices a necessity to the Association.

— $300,000 worth of property were destroyed by fire in New York last week. Incendiarism is rampant throughout the United States.

— It was proposed in the Hamilton City Council, some time since, to obtain power from the Legislature to insure property along the line of water pipes, as the rates of insurance are so high that it has become the cause of complaint. The proposition met with favor, and it was intended to have gone on with the matter, but it was found impossible to arrange a bill for this session, of the Legislature of Ontario, and it has accordingly been abandoned for the present.

THE UNITED PORTS AND GENERAL.—The "United Ports and General" Insurance Company is another newly registered project. The capital is fixed at £500,000, in 500,000 shares of £1 each, and the objects for which it is associated are—To carry on in Great Britain, or elsewhere, the business of fire, life, and marine insurance in all its branches, as well as of underwriters and insurers, and insurance brokers. To make loans and advances, aequire land and buildings, grant annuities, endowments, and loans, and every description of insurance business which may be legally undertaken. To amalgamate with, purchase, or otherwise acquire the business of, or to make any arrangements with any underwriters, insurers, insurance brokers, or insuranee companies in Great Britain or elsewhere; and to do all other things that may conduce or be incidental to carrying into effect the objects of the company. The promoters and directors are—Charles Ellis, Portland-place, underwriter; Peter Pyne, 4 Parliament-street, Hull, West India merchant; Athur Wellesly Joyce, 4 Parliament-street, Hull, merchant; W. N. Goodlath, 8 Eden Quay, Dublin, merchant; D. J. Wake, 3 Mark-lane, merchant; Thomas A. N. Goodlath, Malahide, Dublin, gentleman; William Thomas Proektor, 74 Cowper-road, South Hornsey, merchant; and Thomas Gregg, 18 Upper Sackville-street, Dublin, merchant.—*Insurance Record.*

INSURANCE STOCKS IN HARTFORD.—The following are the latest quotations:

	Bid.	Asked.
Ætna	190	197½
Hartford	190	200
Connecticut	113	116
Phœnix	195	200
Charter Oak	50	51
City	135	145
Putnam	55	85
Travellers'	117	122
Ætna Live Stock	40	50

REAL ESTATE INSURANCE.—The *News* of London, proposes, in view of the vexatious delay and uncertainty attendant upon the conveyance of real estate in England, and the consequent embarrassment to owners and buyers, the establishment of a "Landed Title Estate Insurance Company," to secure land owners against the consequences of a defective title. Commenting upon the evils which such an organization would remedy, it says:

Our system of conveyancing, the obsolete coinage of an age when the investment of capital in land was almost a thing unknown, operates as a deterring influence, paralyzes the motive which should be the mainspring of all traffic in land, compelling its retention in the hands that are unable to make the best use of it, and would willingly part with it, and denying it to those who have capital to invest in it, and are able to employ labour in its improvement.

PORK-HOUSE RISKS.

The Pork season is upon us, and large lines on Hog Products will soon be in demand. Special pleas for this and that establishment will be laid before Insurance Officers, and they will be expected to reduce a rate or enlarge a privilege, because the construction or policy of a particular establishment is near what it ought to be. Owners and agents are sometimes so overcome with the superiority of a new brick pork-house, over the old wooden shell that burned last season, that they suppose no such paragon ever before adorned the footstool, and the clamor, equal to their inexperience, is raised for the Companies, who were blistered when the old one burned, to gape with admiration and then reduce the rate; the popular notion being that THE RATE is made for the poorest risks, and that whatever grades above the worst is entitled to a reduetion! Would it not be good practice for the Companies to accept only the best at THE RATE and reject all others unconditionally?

The principal processes of a pork establishment, and those out of which its inherent perils arise, are four; SLAUGHTERING, PACKING, RENDERING and SMOKING.

Slaughtering and slaughter-houses are always nuisances! not only during the season of killing, but particularly in the summer; and are often burned by those living adjacent. Annual risks on or in slaughter houses, specially in thickly inhabited neighborhoods, are a ticklish business. Short risks that expire before warm weather may do better.

Cutting and packing are not, of themselves, dangerous; but they are usually done in a hurried manner, and often at night. *Pieces of meat are often used as candlesticks*, and sconces and rieketty tin lanterns are apt to abound.

Lard-rendering is very hazardous at the best, and should only be done by experienced and trusty hands. Kettles should be well set, and the top of the furnaces covered with an iron plate having a flange around the edge. A metal *extinguisher* should be hung on a pulley so as to be let down over the kettle instantly when the lard takes fire. *Water will not quench burning grease, it can only*

be done by smothering. Steam rendering generates an explosive gas that takes fire from a lighted candle. No lights of any kind, open or closed, should ever be permitted about lard tanks.

Smoking is undoubtedly the great peril of the business, and the arrangements should be of the best character. A slatted floor—iron is better than wood—ten feet or more above the fire, to prevent meat from falling into it, is indispensable. The smudge should be in a stove or under a brick arch, or conveyed from an outside fire, and great watchfulness should prevail over this department.

City establishments have a great advantage over those in the country, in the superior fire department; the extra care of the city police, in addition to private watchmen, and the better average experience of men who work in large concerns over those in small. It is a great error to suppose that country pork-houses are better risks than those in the city, where they have these advantages.

Pork-houses should be reviewed by the traveling agents of the companies with great care, and their notations carefully heeded. Many a concern that meets the requirements of a printed application, will from its untidy or ill-managed features, be rejected by the vigilant supervisor of risks on a personal inspection.—*Monitor.*

THURSDAY, DECEMBER 3, 1868.

THE AUDIT OF PUBLIC INSTITUTIONS.

The greatest success seems to attend the operations of those joint-stock companies whose management takes the form of Executive individuality, as Mr. Scratchley calls it. The greater the concentration in power, the greater are the chances of working out efficiently and successfully the end in view, more especially so where promptness in decision and a speedy use of opportunities are rendered necessary by circumstances. No one underrates the advantage of judicious management; it is of the greatest importance so far as prosperity is concerned. But there is a tendency to ignore in practice the advantage of an effective audit and a close supervision which dearly bought experience now shows us to be essential to safety. As has been well said "For one Company that fails by dishonesty or from want of skill on the part of the chief official, ten come to grief from careless supervision." The fact that the natural tendency in management is towards concentration of power, suggests of itself a necessity for supervision; not a supervision of a formal character; not a mere hasty glance over totals; not a take-for-granted purview of details, but all that is meant by the words—an effective audit. Directors, in too many instances, are either too much engrossed in their own affairs, or possessed of too little knowledge of the details of the Company they profess to govern, and too careless to pay that attention necessary to acquire the necessary knowledge, to understand very clearly its actual financial condition. Directors who meet, perhaps, once or twice a week, for an hour or two, cannot be expected to acquire a very detailed knowledge of a Company; a want of regularity in their attendance leads to a want of unity in their deliberations; and the absence through accident or design, of a seemingly trifling bit of information, may thwart their most carefully considered resolves. We do not need to go back to the old Bank of Upper Canada for evidence to sustain our statements; unfortunately cases are still fresh in the memory of us all which would support all we have to say on the subject, and a great deal more.

A few weeks ago, the Committee appointed to investigate the affairs of the Gore Bank, told us that "they would be evading a grave though very painful obligation, were they not to express their decided opinion that very much of what is now, for the first time known to be lost to the Bank, ought to have been long since written off as bad, and that a great part of the remainder should have been treated as of extremely doubtful value. And they deem it to be a subject for the deepest regret that the late Directors should not have seen it to be their imperative duty, both for their own sakes and in the interest of all concerned fairly to confront the difficulties with which the institution has been long beset, and to bring their published statements into harmony with the actual facts of the case."

The recent crisis in New Brunswick furnishes the latest case in point. The cashier of the Commercial Bank was allowed to follow his own devices by his Directors, and at the close of his career, left a deficit of $90,000 in his accounts. On his sudden departure, it is at once admitted that he had managed the Bank without the slightest restraint or check. The St. John's *News* hit the nail on the head when it said "the corporators in all financial and industrial associations should see to it that frequent, exact and exhausting examinations are made."

However, it must not be supposed that Banks are the only corporations that suffer from the lack of efficient supervision. Our remarks apply with equal force to all public or private companies, and it would be easy to illustrate our position by case which companies of various kinds have familiarized with trouble through lack simple precautions. The superficial jump at the conclusion when a Bank pends payment, that our system of banl is a wrong one. But the system is no responsible for the failures than it is for failures of the crops. The most perfect tem of banking that could be devised w be liable to the same contingencies. real responsibility rests upon those who to work the system properly. That it ca well worked is proved by the fact that worked well by many institutions w names will readily occur to the reader system may, of course, be improved in ters of detail. Before measures revolu ary are adopted, it would seem expedie try measures remedial. The answers to the Senate Committee on Banking, nished a great deal of valuable inform and contained many useful suggestions guarding against the abuse of a system w in theory and practice, is the best adapt the circumstances of the country. So the bankers who made answers went as to suggest a periodical inspection b per officers to be appointed by Govern We do not think that such an insp would be necessary if a more perfect s of audit were inaugurated.

Mr. Scratchley, in his book on B Building Societies, puts the matter in light, and we cannot do better than gi own words:

"The generality of Auditors elec Shareholders are persons having no for experience in matters of finance their audits, in consequence, are littl than an illusion. Auditors, to be real value, should be in the charac Committees of Surveillance, and shou be expected to content themselves checking the vouchers for payments, a accuracy of the items entered in the books. As long as it is considered a p interference on the part of the Audi they desire to extend their investigati yond the accounts of a company, th give no guarantee either to the Sharel or to the Creditors that all the trans of the Directors and officials have f record in the books.

"Hence the present system of audi the highest degree pernicious, for it t create the idea of security where really given.

"The public mind is perplexed as fraud can be prevented. It is urge when a concern is not managed enti one proprietor, somebody must be ed, and that auditors would not be prevent forgery or the falsification counts. This objection is groundl fraud begins when neglect of superv the management commences; and t way to prevent fraud is to introduce a which will create a fear of detection.

The real source of the disease is the in-
iency of the system of audit now in force.
gentlemen appointed are too often the
inees of the Directors, even where they
ar to be elected by the Shareholders,
owe their election, not so much to their
in investigating accounts, as to their be-
friends of the managing officials. Not
equently do they take their first lesson
uditing books at the company which
are appointed to investigate.

Nor, indeed, is it sufficient for an Audi-
o be merely an honourable man, for it
ires special experience to know where
ands of the "cook" may be traced in a
s of accounts."

then proposes the following plan :

To provide, then, a sufficient bar to dis-
sty, or curative to lack of principle, a
nittee of two professional Inspectors
d be appointed, whose duty it should be
xercise a surveillance over the Execu-
Committee, without interfering in the
f management, except to report what is
done to the constituents of the Com-
or Shareholders. The Inspectors should
oth be simply accountants : one at least
d be required to possess some legal, as
s professional knowledge, of the matters
ining to the particular class of business
are called upon to supervise. They
d be required to test the accuracy of
eports from time to time submitted by
anagers ; and to watch that all their
ures taken are in strict accordance with
eed of Settlement, and the objects and
ples of the Society. These Inspectors
l be men of fair position in life, and be
ately paid. Their tenure of office
l be limited, and fresh Inspectors
l be appointed—under a Rotation sys-
every two orthree years. They should,
particularly, *not be permitted to send
lerks to do the work* which they have
taken, and for which they have been
nally selected.

s would they have the strongest incen-
the faithful discharge of their duties,
by any neglect, they would not only
e particular appointment they hold in
ciety, but render themselves ineligible
offices in other institutions.

be objected, that in some recent no-
failures the management was intrusted
of supposed superior position in life,
wer, that in those very instances the
were deceived by an apparently respect-
oard of Directors placed over the com-
officials, who, while they were not
ed to draw large remuneration out of
ds, were yet too indolent to exercise a
ry and wholesome supervision over its
This would not have occurred had
een Inspectors attached to the associa-
nstead of a large body of Directors,
d no such special experience as would
them to detect the irregularities that
curring.

s success. We may also add that it
tifully printed.

MINING EXTRAORDINARY.

Enterprise has, sometimes, an odd way of shewing what it can do. It is sanguine and self confident. It despises small things for its visions are golden; it sets natural laws at defiance for its spirit is unquenchable. Devions are its ways; oftentimes past finding out. Stimulated by the *auri sacra fames*, it soars on venturesome wing into the regions of imagination, and, from loftiest eyry, outstares the noonday sun. Fledglings are sorely tempted by its hair-brained feats and like Icarus of classic story dare to trust to unproven pinions on a voyage through space, and, with a like luck, end their ambitious career amid the waves of trouble.

It has been said that Canadians are not an enterprising people. If we are not, we are certainly nearing the proper standard. We have in our midst those whose eyes are full of speculation. Madoc has been worked out by promoters of companies, and though the experience gained is anything but pleasant to reflect on, it has not been lost on some individuals. There were some, however, who despised Madoc gold, whose caution prevented them from sinking their money in gold mines so near home. Although little gold has been brought from Madoc, a quantity not inconsiderable has been waylaid on its road thither. Some of those who resisted successfully the seductions of Madoc remembered this and in an unguarded moment fell victims to Nova Scotia. Although we are ready to condole with the unfortunate, we are ready to concede that a nice thing may be made by starting a company. Being in a communicative mood, we are prepared to tell how the nice thing may be made. Suppose A and B own a tract in Nova Scotia worth $9,000. They start a company (let us call it the Honeysuckle) and stock it for $125,000. A and B retain as proprietors and promoters half the stock, $62,500, and sell the other half, $62,500, at eighty cents in the dollar. Two calls of 20 per cent realize $25,000, which A and B pocket and then make a further call of 10 per cent for working capital.

Take another case. C and D delighted with the undertaking just spoken of, determine to try their hands at forming a company.

They also journey to Nova Scotia, secure two acres worth $2,000 and some government areas worth $15. On their return they may bring out the Scotch Thistle Gold Mining Company of Nova Scotia—capital $50,000. Of the 50,000 shares the promoters retain three-eighths, or 18,750, leaving 31,250 to be sold. The latter are sold at 80 cents per share, realizing $25,000. Of this the promoters retain $20,000 for their land and their trouble, and generously allow $5,000 to go as working capital. If the laws of Nova Scotia do not permit a company to obtain a charter unless its capital is $100,000, it is an easy thing to issue 50,000 new shares and distribute them gratis among the shareholders. The only effect of this manœuvre is to double the shareholders' liability, and as it occurs after they have been drawn into the scheme, they can only grumble a little.

By forming companies in the way indicated, it it quite possible for promoters to make considerable sums of money, and as the plan has been tried here with great success, we are justified in concluding that all Canadians are not deficient in enterprise. The promoters are rewarded, and if the shareholders are not satisfied they can tune their voices and chant in chorus the Rev. Mr. Punshon's verses :

> We grasp at grains of shining dust,
> But in the grasp they perish.
> We put in men's applause our trust ;
> It cheats the hopes we cherish.
>
> Remorse, a ghostly shadow blights
> Each wreath we weave for pleasure ;
> But restless still we scale the heights,
> Or search the mines for treasure.

BEET ROOT SUGAR.

The trade in sugar has, as all are aware, assumed large proportions. Sugar is produced now in nearly every country, and enters so largely into our social wants that it will be interesting to our readers if we can show how the trade is to be developed in the New Dominion, and not only the consumers benefitted, but also several other industries encouraged, chief among which is the agricultural one. We purpose, therefore, in this article, to point out as briefly as possible the probable advantages to the Dominion of erecting factories for the manufacture of sugar from beet roots, after first having taken a slight retrospective glance at the sugar trade. In the year 1148 sugar cane was first introduced into Europe from Asia, and cultivated in Cyprus, and afterwards introduced by the Moors into Spain; but the production was very limited and the chief mode of sweetening food was with honey and syrups. In 1506 the cane was first imported into the West Indies, which, with the East Indies, supplied the European world until recently.

This trade rapidly developed itself till the time of the Continental blockade, when Napoleon sought to cripple England by obstructing her Colonial trade. In 1747 a German, named Margraaf, commenced a series of experiments on extracting sugar from different roots, especially beets; but beyond drawing the attention of the scientific world to it, nothing practical resulted. During Napoleon's reign the matter was brought

to a working issue, and many manufactories were built. After his fall the business languished, till 1825, when a new impetus was given to it in France. It was introduced into Germany also, and so rapidly has the trade progressed that nearly every Continental country manufactures its own sugar, and it is not improbable that, twenty years hence, the consumption of cane sugar in Europe, except in Great Britain, Spain, and Turkey, will be a thing of the past.

It is a well-known fact that the productive capabilities of the cane-growing countries are not equal to supply the enormous and still rapidly increasing demand for sugar all over the world, and the question naturally arises, What is the cheapest and best substitute for cane. This is solved in Europe by the extensive use of beets. To prove this we give the quantities produced in the following countries in the year 1865:

France	510,000,000 lbs.
Germany	370,000,000 "
Austria	190,000,000 "
Prussia	100,000,000 "
Belgium	35,000,000 "
Sweden	30,000,000 "
Holland	10,000,000 "

From this it will be seen that France is a long way ahead in the manufacture, making not only enough to supply her own wants, but also to export, since in that year she exported 100,000,000 lbs to Great Britain, thus proving that beet sugar can compete with that produced from cane. The question arises, Can we in Canada, where labor is so dear, raise beets cheap enough to make such a factory a paying concern? By the aid of a few figures we are enabled to frame an answer to this. In the first place, the soil and climate of Canada are admirably suited for the growth of beets. An acre of land will produce eighteen tons, which, at $4 per ton, is $72 per acre. The cost of planting, harvesting, &c., we may estimate at $50, certainly not more, showing a profit to the farmer of $22 per acre, which would well repay him. So much for the raw material. Now for the cost of manufacture—and we may state that the figures we give are derived from a gentleman thoroughly and practically acquainted with the manufacture of beet-root sugar in Germany:

Estimating that the factory is capable of converting 1,500 cwt. of raw beets into sugar each day during the season (say 150 days), we have—

225,000 cwt. of beets at 20c	$45,000
Fuel	13,000
Wages—20 skilled men at $400	8,000
100 unskilled men at $1 per day	15,000
Manager	2,000
Office expenses	7,000
Wear and tear of machinery, &c	10,000
Total	$100,000

225,000 cwt gives 9 per cent.
of raw sugar ..... 20,250 cwt
Loss in refining, say 25 per cent ..... 5,062½ cwt

Amount of refined sugar ... 15,187½ cwt
Worth, at lowest, 8c per lb $121,500

Profit $21,500

This is the profit on the sugar, but to it must be added the syrup made from the waste in refining, and also the refuse, which makes a very wholesome and nutritious food for cattle. The calculation then stands—

Profit as above	$21,500
2,530 cwt of syrup at $1.25	3,162
10,000 cwt of refuse at 50c	5,000
Total profit	$29,662

We notice that in California and many parts of the Western States, the subject has attracted the attention of monied men, and that many factories have been erected. Canada alone could support over a score of such establishments, which would add very materially to our wealth, and enable us to retain and use in the country the money we now sent out to pay for the raw article. The agricultural interest would be materially benefitted, as at least 20,000 acres would be required to raise the necessary amount of beets to supply twenty factories, thus giving a great impetus to farming, and the works themselves would give employment to nearly 3,000 laborers for at least half a year, and that at a season when the demand for labor is slack; as the crushing process is carried on from about the end of October till towards the middle of March, at which time the beets begin to lose their saccharine element. On the Continent of Europe the erection of new factories is constantly going on, and, in many places, by the small farmers clubbing together, on the same principle as our cheese factories, they furnishing not only the raw material, but also, to a great extent, the labor. The only capital required is a sufficiency for erecting the building and getting the necessary machinery. As regards the latter, our large machine shops can readily furnish it—the models could be brought from Germany. Thus a great benefit would accrue to our manufacturing interests. So that, regarded from every point, the establishment of sugar factories would be of general benefit to the Dominion.

The best kind of beet suitable for the purpose, the mode of cultivation, and also the last improved modes of making sugar will be discussed hereafter.

—A meeting of Mr. Scovill's depositors and creditors took place in St. John on the 23rd Nov. A committee was appointed to investigate the bankrupt's affairs.

DOMINION NOTES FROM HALIFAX

Complaint has been made by some parties in this Province that the "Dominion Notes" issued payable in Halifax are subjected to a discount of four per cent. by the agents of the Bank of Montreal here. The fact is these so-called Dominion Notes issued payable in Halifax have certain peculiarities that disentitle them to the name of *Dominion Notes*. The Act under which they are issued says: "Such of the said notes as are made payable at Halifax, shall so long as the currency of Nova Scotia remains such as it now is, be redeemable in that currency at the rate of £1 sterling, English, for every $5 of the full value and shall be a legal tender in Nova Scotia only."

We do not suppose that notes payable at Halifax have been issued by the Bank of Montreal in this Province but if they have it would be well for business men to be careful, lest they find on their hands Dominion Notes which are not legal tenders out of Nova Scotia, and are only received by the banks at a discount of four per cent. The £1 sterling is equal to $5 in Nova Scotia; in this Province it is equal to $4.80.

—We learn from the Chicago *Spectator* that Superintendent Barnes has determined to make a thorough investigation of the business affairs of the Etna Live Stock Company. The failure of the Hartford has evidently started the enquiry. The journal from which we have referred says, "we have no reason to doubt that the Company is solvent, so far as ability to pay all its losses to date and re-insure all its outstanding risks are concerned; but the question naturally arises, in view of the fact that there is no other Company in which to insure, what is the good of a re-insurance fund unless that fund is kept constantly equal to the full amount of its unearned premiums. We think then, that it is plainly the duty of the Company, if it cannot keep its cash assets equal to the full amount of all its unearned premiums, to abandon the business while it is able to do so honorably."

Some statements made by us in an article two weeks ago, respecting the New York Life Insurance Company require explanation. We mentioned that this was a premium paying company, which is true, but for a good part of its past it has done business strictly on the cash system. The statement of the company's assets shows a considerable sum to be held in the shape of premium notes; but these were nearly all taken at an early period of the company's existence. In the twenty-seven years since its organization the New York Life has earned dividends amounting to $2,545,922.52, a portion of which was credited to the Company by former reference to its statement.

☞The Publishing Office of THE CANADIAN MONETARY TIMES AND INSURANCE CHRONICLE is removed to No. 60, Church Street, 4 doors north of Court Street.

MALGAMATION OF EXPRESS COMPANIES.—On h 29th ult., at a meeting of the Merchants' Upn and American Express Companies held in Ne York, a consolidation of the two companies wa formally agreed upon. Under the arrangeents made, the capital of the American was tain at its present amount, while that of the Mchants' Union was counted at one-half its rinal amount, viz., $9,000,000, so that the ital of the consolidated company will be $18,-00000. It appears to have been assumed that th other companies would accept the new corpotion as a part of the working combination of allhe companies, with an interest proportioned to e ratio of its stock to the total capital of the coined companies, viz., 53 per cent. ; but we nderstand that the Adams Company objects to the erms of consolidation between the American an Merchants' Union, and also demand a redistrition of interest in the general combination, no based upon the proportion of capital. As rers now stand, there appears to be some proality of a breaking up of the present joint arrements of the several companies, with a reival of opposition.

HITBY AND PORT PERRY RAILROAD.—The coract for the building of the Whitby and Port Pey Railway has been given to Messrs. Kestevan an Starrat, their tender having been regarded as the most favourable of about half a dozen tenders wh were received. The contractors agree "to conruct and equip the road for the round sum of $3,000, and to accept in payment the $95,000, amnt of the bonuses of Reach, and of the Town an Township of Whitby ; $55,000, cash ; to take $4000 stock themselves, and the bonds of the Company on the road for $140,000." The Company however is to find the right of way. The raay is to be upon the broad or five feet six ind gauge. The subsidies from the Municipalities were voted some time since, and the directors ha about $75,000 in stock to raise. The Whitby Harbour Company has agreed to return as a bonus to e Company. one-fourth of all the tolls collected on manufactured lumber from the north, going over the road for ten years. A preliminary suey has been completed, which makes the disnce from Port Perry to Whitby Harbor 20½ mis. It is expected that the railway will be conructed by the first of August next.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There were rather more securities on the market this week, but they all find ready sale at advancing rates. Bonds and Debentures are much sought after.

Bank Stock—There are buyers of Montreal at 139 ex. dividend, and sellers at 140. For British American 104 would be paid, no sellers. Ontario is offering at 99½ to par. There are buyers of Toronto at 120—no sellers. Royal Canadian has declined, there being sellers at 90½ and no buyers over 90. Considerable sales at 105, which rate is freely offered for stock bearing full dividend. Gore continues to improve; large sales occurred at 43½, at which rate there are buyers. There are buyers of Merchants' at 112½, and no sellers under 113. Quebec nominal at 109, with buyers at 108½ ex. dividend—no sellers under 103. Molson's is offered at 109, with buyers at 108½. City is asked for at 102½ ex. dividend—no sellers under 103. Buyers offer 106 for Du Peuple—none in market. Sellers ask 106⅓ for Jacques Cartier, with buyers at 106. Sales of Mechanics, took place at 95½ to 96. No Union in market—104½ would be paid.

Debentures—Canada sterling 5 per cents sold at 93¼. and Dominion stock at 104½ ; no 6 per cents in market. Large sales of Toronto occurred at rates to pay 6¾ per cent. to purchasers. County are in great demand—none in market.

Sundries—City gas is much asked for, and an advance would be paid but there are no sellers. Canada Permanent Building Society sold at 124½ to 125, closing with buyers at the latter rate. No Western Canada in market for some time past, 106 would be paid. Freehold sold at 104½, and is enquired for at that rate. There are sellers of British America Assurance at 57, and buyers at 54 to 55. Buyers offer 135 for Montreal Telegraph without leading to business. Sales of Canada Landed Credit occurred at 72 to 73, and there buyers at the latter rate. Some small mortgages have been placed at 8 per cent. Good paper is readily discounted at reasonable rates.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, DEC. 24, 1868.

I have nothing new to report. It is a relief to us that the panic in New Brunswick is subsiding; the stocks of both the Commercial and the St. Stephen's Banks have risen considerably. Here the money market is very easy. the difficulty is how to invest capital at anything like profitable rates, there are very few good bills offering, and the Banks readily take them up at from 6½ to 7 per cent. for good trade paper. Even one name bills, with collaterals can be passed at 6 to 7 per cent. There is not much second class paper on the market, which is a noticeable feature, and presupposes a healthy state of trade. The transactions in stocks and shares of all sorts are very light owing to the ideas of buyers and sellers being so far apart that sales have been few and far between. For a full report of prices I refer to our stock and share list. I enclose latest gold and silver quotations :—Gold 35⅛ ; Silver 4⅛ to 4¼ ; Greenbacks 26¼ ; Exchange 25¾ to 26 ; Sterling in N. Y. 9½.

THE BUILDING SOCIETIES OF ENGLAND have been deprived of a great privilege by the late Parliament, which they have enjoyed since their establishment, upwards of thirty years ago. The bill was disguised under the title of "An act to amend the laws relating to the Inland Revenue," and therefore the offensive provision was not detected until it was matured. It provides that "the exemption from stamp duty conferred by the acts of the sixth and seventh years of King William the Fourth, for the regulation of benefit building societies, shall not extend to any mortgage to be made after the passing of this act." As these documents have always been exempt from stamps, it is scarcely possible to anticipate what effect this future heavy charge will have upon those associations ; for it was a boon which encouraged the workingmen in habits of providence.

UNITED STATES BANKS.—Total capital invested in National Banks, $422,804,666 ; taxes paid to the United States, $2,525,607 ; average rate of tax on capital paid to the United States, 2¼ per cent. ; taxes paid to and assessed by State authorities, $8,812,127 ; average rate per cent. of State taxation, $2¼ ; total tax paid United States and State authorities, $18,338,734 ; rate per cent. of United States and State tax on capital, 4½, and on deposits, 3¼.

THE GORE BANK.—Mr. G. J. Forster, wholesale grocery merchant, at Hamilton, has been elected a Director of the Gore Bank, in the room of Dr. McQuesten, who has resigned.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Dec. 2, 1868.

Our harbor is now deserted, with the exception of river craft and some few schooners. What I may term "the water season," has been remarkably open, and vessels have gone down to Quebec and the Gulf with comparative safety. It may be of interest to your readers to have some few shipping statistics of our port for the past few years, and to note the gradual change in the style of vessels employed ; the fluctuations have been in sea-going craft engaged in the European trade, firstly from small ships to those of large size and lately those of a large aize to steamers ; the tonnage of the latter this last year being one-third of the tonnage arrived at this port. I have no doubt that in a few years the greatest bulk of our shipping will consist of steam vessels.

The navigation of the St. Lawrence requires steam power to ensure speed and safety, and when those elements are combined, the bulk of business must fall to their share. In 1865, the arrivals by sea were 272 vessels, with a total tonnage of 134,735 tons ; in 1866 the arrivals increased to 438 vessels, and 189,254 tons. For this year, the arrivals are 409 vessels, and 188,557 tons. Now, to show the increase of steam vessels ten years ago. we had 10 steamers arrived only ; 59 in 1866, representing a tonnage of 69,228 ; whilst in this year the number increased to 67 vessels, with 84,906 tons. The capacity and regularity of the steamers has and will materially effect the business of sailing ships. With proper facilities for better opening up the St. Lawrence to the west, Montreal might safely aspire to rank as one of the largest shipping ports on this continent ; it only requires a certain amount of energy to open some of the many new routes constantly brought under the notice of the public. Will Montreal have the courage to do it ? is the question.

OUR PRODUCE MARKET is very dull, and prices of flour have declined. There are still some shipments to Quebec, but they are so slight as not to affect prices. Extra, $5.50 to $5.75 ; Fancy, $5 to $5.10 ; Supers range from $4.80 to $4.90 for No. 1, and $4.40 to $4.50 for No. 2 ; Strong Bakers' range as high as $5.05 for very choice brands ; the stocks here are not heavy, but the demand from this out will be purely local. Little doing in grain of any description, and prices are purely nominal ; say U. C. Spring Wheat $1.10 to $1.12½ ; Peas, 92½c to 95c ; Corn, 83c to 85c ; Barley, $1.20 to $1.30 ; Oats, 47½c to 48½. Provisions rule in the general dulness, and no change

is to be noted in prices. Butter has rather declined, but is still very high for this season of the year.

GROCERIES.—This market has ruled very quiet, there not being the slightest speculative movement in any article, but fair sales have been made to the trade at full rates. The late fall sales being so unsatisfactory, merchants have preferred holding over their stock, which, with the exception of Fruit and Wine (especially light French), are small; and although a fair amount of goods were placed at the early fall sales, still, from all the reports I can hear from the West, the country storekeepers are decidedly under-stocked, and that is the general impression here, so that, the money market being exceedingly easy, there is no necessity to force goods forward, or in any way sacrifice them. Such firms as have done so during the spring and summer have been so rudely shaken that they have not repeated the experiment this fall. We may look for a fair and healthy business during the winter.

IN DRY GOODS.—The trade is, for the present, over, and many merchants are already beginning to take stock. After New Year's we generally have more liveliness, but till then dull times must be expected.

HARDWARE.—With the close of the Canal the trade in heavy Hardware generally closes, the extra freight charged during the winter by the Grand Trunk Railroad operating against it. The demand for shelf goods has also, for the present, fallen off; but the trade, though light, is steady during the winter, the rise in freight not much affecting the cost.

Toronto Market.

During the past week snow has fallen to the depth of a few inches, and the weather has been cold and freezing. There is no sleighing yet, though in Montreal and other places east of that city, the roads are in first-rate condition, there being an abundance of snow. Navigation is now closed, with the exception of a few vessels which are engaged in the coal and wood trade. The St. Lawrence Canals and the Erie Canal are all closed for the season. As a consequence there has been no export business done. Stocks of produce left at the principal ports are pretty large. A comparative statement of the quantities in store, in Toronto, on the 1st Dec., is a follows:—

	1867.	1868.
Fall, bbls..	1,781	2,426
Fall Wheat, bushls.....	8,619	16,246
Spring Wheat "	40,986	15,500
Oats "	6,600	23,400
Barley "	25,900	85,500
Peas "	12,796	11,492

GRAIN.—*Wheat.*—Receipts light, market dull, holders of Spring ask $1.05 to 107 without buyers. Fall dull and nominal. *Barley.*—There is a fair demand at $1.25 to 128, and $1.30 was offered for a lot, winter storage paid; sales of cars at quotations. *Peas.*—Quiet at 80c. to 82c. for fair to good Grand Trunk peas; sales of three cars at these prices. *Oats.*—Steady at 50c. to 52c.

FLOUR.—Receipts light, there is some demand for Superfine for shipment at $4.65, holders asking $4.75 to 4.80; sales at $4.70. Better grades nominal.

PROVISIONS.—*Butter.*—A lot of 100 tubs sold at 24c. Market closed dull at 23c. to 24½; large rolls sold at 20c. to 22c. *Mess Pork.*—Nominal and unchanged. *Hams.*—A lot of 100 smoked sold at 11¾c. *Bacon.*—Lots of new are held at 10c., no sales. *Lard.*—Steady at 14c. *Dressed Hogs.*—The market was fairly supplied; prices steady as quoted. *Potatoes.*—Plenty, and offering by the car load at 45c. to 55c. *Apples.*—Lots are offering at $2.50 for good winter.

LIVE STOCK.—The best cattle are scarce at $6.50 to 7.00; other kind plenty at $3.50 to 5.00 per 100 lbs. dressed weight. *Live Hogs*, $5.00 to $5.40. *Sheep*—$5.00 to 6.00 each.

HIDES AND SKINS.—Sheep skins have advanced to $1.25 and $1.30; no change in other articles.

Demerara Sugar Market.

The following is from Sandbach, Parker & Co.'s Circular, dated Georgetown, Demerara, Nov. 7:

We last Mail advised a severe drought from which the country had been suffering for some weeks. This has continued up to the present time, and not only is the young cultivation on the Estates seriously injured, but Sugar-making has been much retarded, owing to the scarcity of water in the navigable canals. The inhabitants have also been reduced to great straits for want of drinking water. Trade has likewise suffered severely, and we have to report a dull and inanimate market. The arrivals consist of twelve Vessels from the United Kingdom, four from United States, four from British Provinces, and ten from Neighboring Colonies.

SUGAR.—The demand for Vacuum Pan, for America, has been steady during the fortnight; prices ranging from $6 to $6.10 for good samples up to $6.20 for very choice. The quality of the produce during the fortnight has improved, and considerable quantities have changed hands, eleven vessels having cleared for North America since our last. Muscovado sugar is held for better rates than purchasers feel inclined to give. The shipments to America last month were larger than they have ever been.

MOLASSES.—There has been a decided improvement in this article; the demand good, and prices of Vacuum Pan have advanced; for Muscovado we have but little change to note.

RUM.—No transactions in our Market.

TIMBER.—One charter during the fortnight to load in Demerara River, but no animation whatever in the trade.

Transactions have taken place during the fortnight at the following rates:

SUGARS (package included) sold by 100 lbs. Dutch, 10 per cent. tare F.O.B.

In hhds. of about 1800 lbs. each.

Muscavadoes, equal at	No. 8 Dutch Standard $3.80 ₱ 100 lbs.
	No. 10 do. $4.00 "
	" 12 do. $4.25 "
Vacuum Pan	No. 12 do. $5.50
"	" 14 do. 5.75
"	" 16 do. 6.00
"	" 18 do. 6.10

MOLASSES (package included, sold by Imperial gallon.)

Muscovado, from 20 @ 28 cents, as to color and density	In puns of 100 gals.
Vacuum Pan from 24 @ 30 cents, as to color and density	
RUM (colored, package included, sold by Imperial gal. from 35 per cent, @ 38 overproof 38 @ 40 cents.	Ditto.
From 38 per cent. @ 40 overproof, 40 @ 42 cents.	

Halifax Market.

BREADSTUFFS.—Nov. 24.—Flour continues to arrive freely, supply being equal to the demand. We have no change to note in prices from last week's quotations. Canada No. 1 ranges from $6.25 to 6.50; Strong Bakers $6.65 to 6.70; Extra Canada $7.50 to 8.00, Extra State still continues dull at $6.00 to 6.40, according to quality; No. 2 in good demand at $5.00 to 5.50. Corn Meal without change at $4.50 for kiln dried, and $4.40 for Fresh Ground. Oatmeal $7.70 to 7.80. Imports from January 1st to November 24th, 1867 and 1868:—

	Bbls. Flour.	Bbls, Cornmeal,
1868.....	167,252	43,119
1867.....	178,340	33,925

PROVISIONS.—Pork $22 50.

WEST INDIA PRODUCE.—Sugars and Molasses continue in fair demand at quotations. At auction a lot of about 70 hhds, choice Vacuum Pan Sugar sold at 9¼c. and 9⅜c. duty paid. We quote Porto Rico 6¼ to 6¾. Barbadoes 5¾ to 5¾c. Cuba 5½ to 5¾. Centrifugal Cuba 6c. in Bond. Rum scarce and in demand at 70 to 75c. for Demerara and 60 to 65 for St. Jago.

FINANCIAL.—Bank drawing rate on Lon... days sight, 3¼ per cent prem. Currency ... 22 per cent. discount. Montreal sight dr... per cent. prem. Newfoundland sight draft... cent. prem.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Compay.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the North western States, and through to California.

ÆTNA
Live Stock Insurance Company

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1868.

At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society –the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.

HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.

A fire in F. X. Casson's stables, St. Joseph Street, last night, destroyed three horses.

E. L. SNOW, GENERAL AGENT,

Toronto, 1868. 38-1y

Briton Medical and General Life Association,
with which is united the
BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG.;
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing,

I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern*:..

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Polter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.
Toronto, Dec. 3, 1867. 16-1y

Life Association of Scotland.

INVESTED FUNDS
UPWARDS OF £1,000,000 *STERLING.*

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS
Are applied on a special system for the Policy-holder's
PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,
WITH THE OPTION OF
LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains
A LARGE REDUCTION OF PRESENT OUTLAY
OR
A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,
Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in fact for Policy-holder's heirs, or other purposes.

THIS Company, established in 1851, is one of t reliable Companies doing business in the com has been steadily prospering. The *Massachusetts I Reports* show that in nearly all important matt superior to the general average of Companies. It intending assurers the following reasons, amongst for preferring it to other companies:

It is purely Mutual. It allows the Insured t and reside in any portion of the United States and It throws out almost all restriction on occupation Policies. It will, if desired, take a note for part Premium, thus combining all the advantages of a all cash company. Its Dividends are declared and applied in reduction of Premium. Its Divid in every case on Premiums paid. The Dividend PHŒNIX have averaged fifty per cent. yearly. settlement of Policies, a Dividend will be allowed year the policy has been in force. The number dends will always equal the outstanding Notes. losses promptly during its existence never hav tested a claim. It Issues Policies for the benefit ried Women beyond the reach of their husband's Creditors may also insure the lives of Debtors. Its are all *Non-forfeiting,* as it always allows the as surrender his Policy, should he desire, the Com ing a paid-up Policy therefor. This important will commend itself to all. The inducements no by the PHŒNIX are better and more liberal than any other Company. Its rate of Mortality is ex low and under the average.

Parties contemplating *Life Insurance* will find i interest to call and examine our system. Polici payable either in *Gold* or American currency.

PROSPECTUS

OF THE

OMINION EXPRESS COMPANY OF CANADA

ORGANIZED UNDER THE JOINT STOCK COMPANIES' ACTS.

CAPITAL STOCK, - - - - - - $1,000,000,

In $10,000 Shares, $100 each.

is proposed to organize a DOMINION EXPRESS COMPANY, to meet the present and prospective demand for increased facilities of general transportation. It is the interest of Canadians to do their own work, and *accumulate* cash capital, and *one* of the objects of this scheme is the retention is country of the profits arising from the business done.

Express Companies obtain "four-fifths" of their business from merchants and bankers, and no reason exists why they cannot transport their own , by their *own Agents, economically* and *efficiently*, and by a *union of capital* and *effort*, they hereby resolve so to do. Being thus united, and ing to it their business and influence, secures to this Company certain and complete success.

This organization, like the mail system, is to extend, under *one general management*, to all cities, towns and villages in the Dominion, and to connect parts of the United States, and being but "one Company," will secure *unity, despatch* and *accuracy*.

t is proposed to distribute the stock widely, throughout the Dominion, in limited sums, apportioned as nearly as practicable to the business of the ribers. The capital Stock of the Company to be not less than $1,000,000, in 10,000 shares of $100 each.

Ten per cent. of the stock subscribed will be required to be paid after the subscription shall have reached the sum of $250,000, and after a Charter ha have been obtained, of which due notice will be given to the subscribers; the subsequent calls, not exceeding *ten per cent. at any one time*, to be a at convenient intervals, as the demands on the Company may require. But the aggregate of all calls to be made will, it is believed, not exceed *y per cent.* of the Capital Stock.

The business to be done strictly on *cash principles*. With a paying business assured from the start, by *interested* and *reliable* Stockholders, it will be be seen that a small per centage *only* of the subscriptions will be required to put the Company in working order, and it is confidently and reasonably el red that the receipts will thereafter maintain and extend it. And in order to secure an equitable voice in its management, the principal commercial nes will be represented at the Board, by Directors recommended by Stockholders of their own localities, who will also recommend to the Direction ne cal Agents, and thus secure a general influence in its management, as well as its business.

All Express enterprises, both in this country and the United States, have been decidedly successful, resulting from the profits of the business itself; nc having an organization and a share list—such as are now proposed—with energy and economy in the direction, no doubt can be entertained of the no satisfactory results.

With such prospects, the Merchants of the Dominion, Capitalists and others interested in the success of this enterprise, are invited to become co holders.

The following shall be included in the By-Laws to be hereafter framed for the Government of the Company:

. The Company shall be known by the name or title of "THE DOMINION EXPRESS COMPANY OF CANADA."

. The Capital Stock of the Company shall be *One Million of Dollars*, divided into *Ten Thousand Shares of One Hundred Dollars each.*

. Each Shareholder shall be liable only for the amount of Stock subscribed by him, her, or them.

. The Shares of Stock of the Company shall be transferable; but no transfer shall be valid without the consent of the Directors, in writing, unless hares shall be paid up in full.

. It shall be lawful for the Stockholders, so soon as the sum of two hundred and fifty thousand dollars shall have been subscribed, to call a General ng of the subscribers, to be held at the office of the Company, in the City of Montreal, and proceed to elect nine qualified persons to be Directors e Company, each of whom to be a proprietor of not less than ten Shares of Stock of the said Company, and three of whom shall form a quorum, all the powers of the Directors. The said Directors shall also, at their first General Meeting, elect a President, Secretary, Treasurer, and General intendent or Managing Director, from amongst themselves.

. The said Directors so elected shall proceed, without delay, to frame all necessary By-laws to govern the Company, and shall have power to alter mend the same as circumstances may require.

. The Directors shall not have power either to *sell out* the said Company to any other Express Company or organization now in existence, or hereto be incorporated, or to amalgamate with any other Express Company.

. No Stockholder shall be at liberty to hold in his, her, or their name, more than one hundred shares of the Capital Stock of the said Company, ut the consent of the Directors, in writing, first having been obtained.

PROVISIONAL DIRECTORS.

		$7,517,328 32
Divisible Surplus		$1,642,425 59

During the Year, 6,597 Policies have been issued, insuring $22,541,940.

The Progress of the Company for the Past Four Years will be seen in the following Statement:—

	Assets.	Increase of Assets over previous year.		Assets.	Increase of Assets over previous year.
1864	$3,658,755 55	$1,005,217 63	1866	6,727,816 65	1,845,896 95
1865	4,881,919 70	1,223,164 15	1867	8,774,326 01	2,046,509 36
		Total increase	$6,120,788 69.		

One of the special features of this Company is the TEN YEAR NON-FORFEITURE PLAN.

The system popularly termed "The Non-Forfeiture Plan," was originated and first presented to the public by this Company, in their well-k "TEN YEAR NON-FORFEITURE POLICY," in the year 1860; and its perfect adaptation to the wants of every class in the community, obvi every reasonable objection to Life Insurance, is shown from the fact that every other American Company has been compelled, in deference to opinion, to adopt it, although in many cases it is done in such a way as considerably to impair its value. It has received the *unqualified approval* of *best business men of the land*, large numbers of whom have taken out policies under it, simply as an investment.

By the Table on which this class of Policies is based, a person incurs no risk in taking out a policy. Insuring to-day for $10,000, if he should die to-morrow, the immediately becomes a claim; and if he shall live ten years, and make ten annual payments, his policy will be paid for, and his dividends *still continue*, making

HIS LIFE POLICY A SOURCE OF INCOME TO HIM WHILE LIVING.

By the specific terms of these policies, and not by vague and indefinite statements made in circulars, a party after the second year does not forfeit what he has paid in pre Thus, if one insuring by this plan for $10,000 discontinues after the second year, he is entitled to a PAID-UP POLICY, according to the number of full years paid in, as follow

Second year, two-tenths of $10,000 (amount insured), amounting to.. $2,000 | Fourth year, four-tenths of $10,000 (amount insured), amounting to.. $4,000
Third year, three-tenths of $10,000 (amount insured), amounting to.. 3,000 | Fifth year, five-tenths of $10,000 (amount insured), amounting to.... 5,000

And so on, until the tenth annual payment, *when all is paid.* The paid up policies, for the proportionate partial payments, as well as for the full amount, participate Dividends of the Company during the whole existence of the policies. ☞ This being a purely mutual Company, ALL ITS PROFITS ARE DIVIDED AMONG THE ASS

Meetings.

THE TRUST AND LOAN COMPANY OF UPPER CANADA.

The following is the report of the Directors submitted to the Proprietors on the 30th Sept. :

"The following report and statement of accounts for the six months ending the 30th of September of the current year is submitted to the proprietors. The balance at credit of revenue, including £3,359 5s. 6d. brought forward from March last, is £17,156 12s. 1d. The Directors recommend that out of this balance a dividend at the rate of 8 per cent. per annum, less income tax, be declared on the paid-up capital stock of the Company ; £3,920 18s. will be carried to the reserve fund, in accordance with the provisions of the Royal Charter of Incorporation, and the balance then remaining to the credit of the next half-year's accounts will be £3,235 14s. 1d. During the period embraced by these accounts, the reserve fund has been charged with the sum of £1,277 15s. 4d for losses on realization of securities in default. The balance at credit of this fund, after adding the £3,920 18s. above referred to, will be £68,391 13s. 6d. The Directors have pleasure in stating that the debentures of the Company are again in request, and that the renewal of bonds maturing during the present year—including a large proportion of those issued at 6 per cent., and which have been continued at 5 per cent.—have been very satisfactory. The demand for loans at present in Canada is not as active as the Directors could wish, but they trust that the recent abundant harvest will shortly have a beneficial effect on the operations of the Company.

DIRECTORS.—The Rt. Hon. Edward Pleydell Bouverie, M.P., president; Charles Morrison, Esq., deputy-chairman. Ashley Carr Glyn, Esq. ; Jas. Hutchinson, Esq. ; William Gordon Thomson, Esq. ; T. M. Wegnelin, Esq., M.P., Secretary—F. Fearon, Esq.

THE GRANBY RED SLATE COMPANY.

From the Annual Report of the Directors we condense the following :

Up to September 12, 1867, operations had been carried on in opening the quarry upon the Company's property, for a period of about three months, and an expenditure incurred of about $1,500. Soon after this time, they had purchased an adjoining property, consisting of a farm of 100 acres, whereon were indications of a deposit of good workable green slate of great extent, for $1,900. The terms of payment were $1,000 payable within thirty days, the remaining $900 in the ensuing month of May. These payments were duly made, and the deed of transfer executed. This purchase, added to the 200 acres previously owned, gives a domain of 300 acres of good land. With respect to the slate itself, it is found, upon test of working, to be equal in quality to that of the best quarries in the States, and the supply is inexhaustible. The workable banks of slate have a smaller overburthen to be removed, and are more free from other substances than is usually the case with slate quarries. The slate upon the new purchase proving to be good, the workmen were all put upon the opening commenced thereon, which was prosecuted vigorously through the winter, and has been continued till the present time. There has been discovered also a very valuable band of purple slate lying alongside of the green, so that the two bands can be worked together. A large quantity of overburthen has been removed, so that a sufficiency of good workable slate is easily obtained ; and during the ensuing winter a small number of quarrymen will be sufficient to supply the factory. The works are now fully equipped, with the exception of stone-cutters, for doing carved work upon mantels, &c. It has been found exceedingly difficult to obtain this class of workmen.

There are some $2,000 worth of mantels, &c., partly finished, which would have been completed by the present time if stone-cutters could have been obtained. Arrangements are now nearly completed for a full supply in this department of labour.

The property of the company is all paid for, and free from mortgage or claim of any kind. There is still sufficient treasury stock remaining to pay off all the indebtedness of the company, leaving 2,000 shares unsold. The last sales have been made at $3 per share, at which price several hundred shares have been sold. A limited number of shares are still offered at that price.

It is estimated that the present equipment of machinery and scale of operations will be sufficient to turn out manufactures to the average amount of $2,000 per month for the ensuing year, which, from the experience of similar establishments in the States, the directors believe will yield a remunerative profit. From the orders already received, and from correspondence had with dealers in this class of manufactures in different parts of Canada, it is considered pretty certain that there will be found a ready sale *in Canada* for all articles the company can produce.

The Directors feel that they should not conclude this report without alluding to the valuable services rendered by their Secretary, Mr. E. L. Snow, to whose good judgment and untiring efforts they attribute, in a large measure, the sound and prosperous condition in which the company's affairs are found at the close of its first year's operations.

ANOTHER WOODEN RAILWAY PROJECT.—A meeting was held in Montreal, on the 1st December, for the purpose of considering the propriety of promoting the construction of a wooden railway from Montreal to some point to the North of St. Jerome, in the county of Terrebonne.

The following gentlemen were present: The hon. Edouard Masson, of Terrebonne; Dr. LaChaine, of St. Adele; Godefroi Laviolette, L. Villemure, of St. Jerome; A. W. Ogilvie, M.P.P., Lewis Beaubien, M.P.P., Duncan Macdonald, P. S. Murphy, Chas. Legge, and several other influential citizens.

Moved by Louis Beaubien, Esq., seconded by Dr. Lachaine, and unanimously resolved, That the meeting is of opinion that it is expedient to build a wooden railway from Montreal to the Northern part of the district of Terrebonne, in order to encourage the colonization of that part of the country.

It was then decided that a committee should drive out to St. Jerome, and inspect the country

north of that village so as to be in a position to report at a future meeting on the best route to be adopted.

QUEBEC AND GOSFORD RAILWAY.—A full meeting of the provisional directors was held on Monday evening in the Mayor's room, City Hall. Some time was passed in discussing a proposition made by Mr. Hulbert in a letter received that day, and a sub-committee was appointed to examine and report on estimates, &c. The proposition to give each shareholder annually one cord of first quality three-foot wood for every share of paid-up stock was fully considered and resolved on by the Board. It was resolved also that each share should carry with it one vote, and that as soon as $60,000 of stock shall have been subscribed, a general meeting of the shareholders should be called to elect their own Board of Directors. Several gentlemen of the Committee were named, who will call upon the citizens with lists, for the purpose of getting the stock taken up as soon as possible.—*Chronicle.*

Insurance.

INSURANCE MATTERS IN MONTREAL.

(From Our Own Correspondent.)

MONTREAL, Dec. 8th, 1868.

There have been few fires in Montreal for the past two or three weeks; the only heavy one in the city (until to-day) being that at Graham's Stationery Store, on St. Francis Xavier Street, by which the Royal and Scottish Provincial will lose some $10,000, and the Citizen about $1,000 on the building. This morning, at about 6 a.m., a fire was discovered in the Custom's Examining Warehouse, on Common Street; the alarm was promptly given, and the fire subdued after a sharp fight. The loss will probably range from $7,000 to $8,000. The goods were insured by the Custom House authorities for $152,000, in several of the leading English Offices here. There has, evidently, been foul play in the case, and the supposed criminal is in the hands of the police, for, upon investigation immediately after the extinction of the fire, desks and drawers were found to have been broken open and the contents tumbled about in great disorder. A robbery has evidently been committed—by whom is a question for our indefatigable Fire Marshals to decide. These gentlemen, however, are much more zealous in the collection of their fees than in the rather more diligent enquiry into origins of fires. The first session of our Local Legislature will, it is hoped, make a radical change in that office.

There is little or no news of an interesting nature in Insurance matters transpiring here at present, the usual break-neck competition for business still prevails to a considerable extent. Perry, the Inspector of the "Royal," has returned from his tour in the Western States, and has completed his very clear and voluminous report on the state of Insurance matters in the far West.

FIRE RECORD.—Brooklin, Ont., Dec. 4.—Last night the barn on Thos. Lumsden's farm, about a mile east of Brooklin, and rented by Henry Knight, caught fire. 200 bushels of wheat, a lot of oats, and three head of cattle were burned in the barn. Probable loss, $1,500 to 2,000—insured for $600.

Ingersoll, Dec. 7.—A fire broke out in the parsonage occupied by the Rev. J. P. Hincks, incumbent of St. James's Church, which, with the barn and building adjoining, was totally destroyed. Most of the library and furniture were saved. Loss $1,000; insured in the Western for $600.

Simcoe, Nov. 27.—The grist and woollen mills belonging to Jacob Sovereen, township of Middleton, County Norfolk, with all their contents, were entirely destroyed by fire. The Simcoe *Reformer* says the fire is supposed to have originated from a lamp hanging near the ceiling. Mr. Sovereen, who had lain down to sleep for a while, had a narrow escape, and was considerably scorched. There was a large quantity of wool, cloth, &c., in the mill, but nothing whatever was saved. The loss will amount to $10,000, which is only partially covered by an insurance of $2,000 in the Gore Mutual.

Quebec, Dec. 1.—An alarm of fire was raised but no damage done. Subsequently a fire started in a shop in St. John Street, next to the store of Leger & Rinfret, occupied by Maurice, dealer in general merchandise. When an entrance was effected by the brigade, it was found that the fire proceeded from a large wooden box under the counter. It was extinguished without much damage.

Montreal, Dec. 3.—The dwelling house of Mr. Ward, situated off the St. Catharine road, about half a mile from the residence of the late Sheriff Boston, was totally destroyed by fire. The property, we understand, was insured for $8,000.

Kingston, Dec. 3.—A fire broke out in the bakehouse of McCammon, William street, but was extinguished before any serious damage was done.

Trenton, Dec. 2.—This fire, which was mentioned last week, originated in the millinery shop of Mrs. Wicks on Water street, and extended to the stores of Mr. Losey and the harness shop of Reeves & McEwen; these buildings which formed one block were consumed, only a portion of the stock saved. The fire extended to two unoccupied frame shops, owned by Geo. Reeves, and the dwelling house adjoining, owned by Geo. Young and occupied by Irish, dentist, and McCready, tailor. A good deal of damage was done to goods by removal, the total loss is unknown, but will range from $10,000 to $14,000; no particulars as to insnrance.

Mitchell, Ont., Dec. 1.—The saw mill on 5th concession of Logan township, owned by Thos. Matheson, of Mitchell, and worked by Cyrus Allan, was totally consumed by fire. Allan, it appears, placed a can of oil upon the stove, and, having left the mill for a short time, in his absence the fluid boiled over, and from the heat of the stove, ignited. The flames soon reached the building, causing the destruction of the property. Loss, about $1000; no insurance.

Maryboro' Township, Ont., Nov. 17.—Patterson's saw mill, on the 7th concession, was totally consumed. No insurance. The fire is supposed to have been caused by sparks blown from the furnace during a high wind.

Orillia, Ont., Dec. 1.—The residence of T. W. George, Postmaster, Falkenburg, was destroyed by fire. We have no particulars.

Toronto, Dec. 3.—An alarm was given, and the engines turned out, but only a chimney was on fire.

Nictaux, N. S., Nov.—The saw mill, grist mill and carding machine, owned by Samuel McCeown, at Nictaux Falls, were totally destroyed by fire. The loss is estimated at $4,000. No insuranee.

Plattsville, Ont., Nov. 27.—Park's tannery, in this village, was totally destroyed. The steam engine and the hides in the vats were saved; no particulars as to insurance: cause unknown.

Inverhuron, Ont., Nov. 25.—An extensive fire occurred at this village. The following particulars are received:—Alex. McLellan, building entirely consumed; supposed to be fully insured. L. Oliver, building insured; a lot of tools, a quantity of finished and unfinished work, all his household goods. Hugh Matheson, building, a quantity of lumber and some tools; some insuran . P. McRae, building, and about $400 in goods; no insurance. P. & N. McInnis, pearl ashes, value about $500. J. H. Coulthard Underwood, goods about $400. John McDonald, do., $200. W. McFarlane, do., $150. Mrs. Turner, Tiverton, do., $70. Also, a quantity of fish and fi tackle, the property of fishermen.

Ingersoll, Dec. 3.—Mr. S. P. Lodges' l factory was entirely destroyed by fire this m ing. It is supposed to have been the work o incendiary. A reward of $100 is offered f apprehension and conviction of the part parties.

Stratford, Dec. 1.—Some accounnt of th in Workman's hardware store was given last the loss is about $4,000; insurance $2,600; supposed it to be the work of an incen while others affirm that it was purely accide

Windsor, Nov. 27.—A fire occurred at W ton, a few miles from Windsor, which dest several cooper shops and their contents, co ing of tools, barrel staves and barrels, the pr ty of Mr. Hiram Walker, of Detroit. The l ings were so combustible, that althoug Windsor steam engine was conveyed to the the fire swept the whole range.

Napanee, Ont., Dec. 3.—Last night, abou miles from this place, a fire broke out, at o'clock, in a house, formerly a tavern stan owned by Patrick McAmbridge, which was b together with a quantity of grain, whic stored in the house. The fire was causec defective stove pipe. Loss about $1,C00; surance.

Stratford, Dec. 5.—A dispatch says: night, about nine o'clock, a fire broke out stables in the rear of the old "Union H The whole centre of the town, for a time, danger, but by the exertions of the people suppressed. It was the work of an incend

Carleton County, N.B., Nov. 27.—The d of Mr. Arch. Good, of Williamstown, was to the ground, with the greater portion contents, such as furniture, household good visions, &c. Mr. Good was absent from and the inmates of the house had hardly escape. No insurance.

MARINE RECORD.—The following d have occurred to lake shipping, as repo American papers:

Schooner Condor, of Montreal, Capt. from Montreal to St. John's, Newfoundlan being in collision off Cape Ray, went ash Point-au-Basque, and is expected to be loss.

The schooner Minnesota, loaded wit went ashore about seventeen miles north nistee, and will prove a total loss.

The schooner Mercer, of Port Huron went ashore at Port au Basque, had no late accounts, been got off, and it is now she will prove a total loss. She eam 1849, and was formerly a United States cutter, but for the past four years has in the merchant service. She was 130 t measurement.

The schooner J. G. Beard, bound fr Elgin, Canada, to Oswego, with a cargo o ran ashore on Charity Island, soon afte port, and was obliged to jettison 2,000 b her corn in order to get off.

The schooner M. F. Johnson lies in fathoms of water under Erie Peninsula. bound from Detroit to Erie. The ves sured for $8,000—$4,000 of which is in th

The schooner Northerner pounded hea the bottom while loading with wood at at Amsterdam, and after getting out lake was discovered to be leaking badly. he could not keep her free, the captain her alongside the pier at Port Washingt the deck load was discharged in order t her. This done, the services of the Cuyahoga were secured to tow the disabl to Milwaukee. She filled with water sized off Port Uloa, and had to be ad The Cayuhoga picked up her crew an them to port.

e schooner Jennie Mullen is at Port Huron, her jibboom, bowsprit, and everything forgone. Probably the result of a collision.

e schooner W. T. Emery, a few days since, in contact with the tug Jessie, just outside rt Burwell harbor, resuling in damaging the r works of the latter and the head gear of former. The total damage will probably $200.

e schoomer Billy Doran, a small vessel bound Rochester to Cobourg, on the 10th instant., cargo of 150 barrels of salt, has not been from, and apprehensions are felt for her . The crew consisted of Captain George y, James Estes, son of Captain Estes, and nen.

the 18th the schooner Clyde, bound from Sound, with hay and supplies, on the way Byng Inlet, ran afoul of the steamer Francis , off Cape Commodore. The latter was ly injured, but the Clyde had her larboard washed in and sprung a leak. She was towed en Sound.

tter from a resident of Stony Point, a short ce from Monroe, on Lake Erie, states that e 16th inst. a vessel supposed to belong to , name unknown, foundered near that place, er deck load, hatches, etc., were washed d. Of the crew nothing is known.

leveland despatch says: Theodore Cham t, President of the Northern Transportation ny, gives up the City of Boston, sunk in Michigan, as a total loss. She was valued ,000; insured for $20,000.

tug Quayle brought into Cleveland the illiams, owned there, that had capsized in w Bay. She was laden with lumber. Her ad was lost, also the spars and sails; very nsurance.

schooner Mazeppa, which went ashore on Traverse Bay is a total loss. She was in Chicago, and worth $10,000, partially d.

schooner Josephine Horn went to pieces anistee; insured for $1,500, and cargo for

schooner Arbuckle ashore in Sister Bay Michigan, will likely prove a total loss; for $2,500; she is owned in Racine.

brig Mechanic struck the pier at Racine as smashed in; loss $3,000; insurance had half an hour before.

RANCE DEPOSITS.—The Guardian Fire and surance Company of London, England, has osed in cash $100,346.86 with the Goverut agent not yet appointed. The Star Life nce Society of England has deposited 6.86: Joseph Gregory, agent, Toronto.

e Fire Brigade of Sarnia entertained their firemen of Port Huron,—together with mbers of the Sarnia Corporation,—to a on the evening of the 26th ult., about two l, in all, assembling to take part in the ings.

r Hamilton exchanges say that a special of the Victoria Mutual Insurance Com- s held in Hamilton on Monday last, "to the practicability of establishing a branch city to take risks within the range of the the water works." The project was favortertained, and a committee was appointake preliminary steps for carrying out the n view.

ANNIA FIRE INSURANCE ASSOCIATION.—mpany, the registration of which was in our paper of September 19th, is now ed as fully inaugurated for business with pl of half a million, in £10 shares, with increase to one million.

Briton Medical and General Life Associawhose connection the Britannia Fire Aswill enjoy the advantage—has an annual premium income of upwards of £230,000, the new premiums exceeding £25,000 a year, and possesses upwards of 2,700 agents, with branch offices in Edinburgh, Glasgow, Dublin, Manchester, Liverpool, Birmingham, Leeds, Nottingham, Swansea, Bristol, Plymouth, Southampton, and Hamburg. The share and Policy holders of the company number over 25,000 persons, and in addition, the society, from its peculiar constitution, has an extensive connection amongst a very large number of the medical profession throughout the kingdom. The whole of this large representative and connectional influence will, under the above arrangements, be used for the benefit of the Britannia Fire Association, and from the valuable organization thus formed, a large and remunerative business may be safely anticipated. It is not difficult to predicate a large amount of success, considering that Mr. Messent, of the Briton Medical and General Life Association, has accepted the responsible duties of manager of the Britannia Fire Association.—*Investors' Guardian.*

THE POWERS AND DUTIES OF FIRE INSURANCE AGENTS.

THE AGENT.—By common law, any person or persons having power to do a thing, in his or their own right, may do it by an agent. A company can not be affected by any act of an agent not within the scope of his authority. A company can not be discharged by *private* instructions to agents, the insured being ignorant of such instructions at the time of making the contract. When an agent has no written appointment, the jury must decide as to the extent of his authority, from what he testifies and did, coupled with the acts of the company recognizing him. No person can act as agent in a transaction in which he has an adverse interest or employment. An agent can not receive an application from himself, and insure his own property under it so as to bind the company. An agent cannot delegate his authority to another. Policies which are valid only when countersigned by an agent duly authorized, must not be signed by another party for him. An agent for two or more companies takes a risk in one of them and reinsures it in a second for which he is also agent; held, that such reassurance is not binding on such said company until approved by the parent office. Agents having no power to issue policies, cannot consent to transfer of policies, or make other valid endorsements. Knowledge by agents of facts forfeiting a policy, is not binding upon his company, unless communicated to him by the insured ,—rumor or street talk is not notice. An application is held to be the act of an applicant, and where the conditions of the policy require that the applicant shall be bound by his application, he is affected by any omissions in it by the agent, even when the latter is agent of both parties. But when an agent omits from an application facts stated by applicant, and which agent promised to insert, the agent must not suffer for the omission. An applicant entrusting an application in blank to a *sub*-agent, not empowered to issue policies, with permission to fill up the same, is responsible for statements subsequently inserted by the subagent. If either party must suffer by the mistake of an agent, it must be the party whose agent he is. When an agent surveys premises and inserts the value as given by applicant, such value binds the insured, but not the company. An agent has no authority to issue a policy *after a loss occurs*, if known to him, though in receipt of an application for same, but not acted upon. And if a verbal contract for the insurance had been previously distinctly made, the agent should nevertheless decline to issue the policy until the facts have been communicated to his company. In a partnership agency, each partner has all the powers of the firm.

Duty of an Agent.—In cases of loss by fire, in the absence of a special adjuster, the local agent must identify himself heartily with his company, and act upon the defensive, so far as necessary, until he can hear from the parent office. He should fully comprehend that *he is the representative of his company*, and *not of the insured*: "a man cannot serve two masters." He should also understand that while it is *not* expected that he will seek to take undue advantage of any party, it *is* confidently that he will watch closely to prevent any party from taking improper advantage of his company, either by accident or design. And, as such representative, he should be especially careful, in doubtful cases, that he does not commit himself or his company to a recognition of any claim, or to any definite line of policy as to its adjustment, without especial instructions from the parent office; for inasmuch as the laws are the only safeguard for the underwriter against unjust and fraudulent claims, so no legal point in favor of the company should be unadvisedly waived or surrendered, either by act or by implication, until the proof submitted shall have been made entirely satisfactory in all its details, or the claim may have been compromised. If the loss be a just one, it cannot be injured by scrutiny. Undue haste, on the part of a claimant, is suggestive that something behind needs investigating; whilst feverish anxiety on the part of the agent to hurry up the closing of the claim, because other companies have paid, indicates want of experience and lack of judgment.

Notice of Loss.—Where a case of loss or damage under a policy of his company, whether large or small, comes to his knowledge, the local agent is required to notify the parent office immediately, by telegram when the amount is large, giving number of the policy, probable amount of loss, partial or total; with the gross amount of other insurance, if any; to be followed, with as little delay as possible, by letter giving particulars more fully; as to whether knowledge of such loss was obtained directly from the insured, or his agent, in accordance with the conditions of the policy, or from other sources; also the names of the companies interested in the loss, and amounts covered by each; together with such other information touching the loss or damage as may be known or suspected at the time. This is imperative! In cases involving large amounts, or likely to prove intricate in the settlement, a special adjuster is usually sent from the office; but smaller and simple cases may be left to the local agent, whose mind will be much enlightened as to his own duties and the reserved rights of his company, by an attentive study of the printed "*Conditions of Insurance*," as given by the policy, and by correspondence with the parent office, when necessary.

Preservation of the Property.—After notice of the loss has been promptly forwarded to the company, and until advised by the parent office, the local agent will look after the interest of his company. He will see that the owner, whose duty it is to do so, under the conditions of the policy, makes proper and timely efforts to preserve from further injury or deterioration the property saved, whether sound or in a damaged condition. If necessary, it should be removed to another building. Should the owner refuse or delay, to the evident detriment of the property, to have it properly attended to, he will do so at his own peril. The agent will at once notify the parent office of the fact, by telegram in special cases, and await advices. Should delay, however, involve no immediate injury to the property, action by the local agent may be deferred until the arrival of an adjuster, or definite advices be received from the company. Especial attention should be paid to shelf hardware, cutlery, stove and tinware, and similar stocks which rust quickly. *Wet goods*, millinery stocks and such like, should be opened and spread out to dry, so as to prevent mildew, stain or mold, arising from heat. Any perishable property, which would materially injure by delay, should be submitted to appraisers as soon as possible, and when appraised, turned over to the claimant, as every day's delay adds to the damage;

or if delay would render it likely to be totally destroyed, it should at once be sold at auction, or at private sale, by agreement with the claimant, for cash, "*for and on account of whom it may concern.*" As the representatives of the insurers, agents have the right of access to, and a general supervisory interest over the property covered by their companies, which *should always be exercised when necessary* for its preservation against further damage by loss or theft. Further instructions upon the duty of local agents, in regard to damaged goods, will be found under the head of "Appraisement of damaged goods."

Investigation of the Origin of the Fire.—While attending to the proper preservation of the goods or other property, the local agent should make diligent inquiry as to the origin of, and circumstances attendant upon the fire; the more especially if originating upon the premises of the insured, so as to be prepared to communicate the result of his investigations either to the adjuster on his arrival, thus giving him a clue to work upon, or by letter to the company.

Examination of the risk, at the time of the fire, with reference to the terms of the contract.—Agent should carefully read the written portions of the policy, and the representations as made in the survey and application, to discover if any changes *material* to the risk had been made since the policy was issued; either by changes in occupancy, by additions or alterations, or other causes affecting the insurance. The conditions of the policy should be carefully scanned, for the purpose of detecting any *wilful* violation by the insured. Any information gained by this investigation of the policy and conditions should be carefully noted, ready for use at the proper time, should occasion require. Having made all these preliminary investigations, the agent is ready to proceed with the adjustment of the loss; and the more thoroughly the investigation has been thus made, the more satisfactory and easy will the final adjustment be.—*Griswold's Handbook of Adjustments.*

MATHEWSON *v.* THE ROYAL INSURANCE COMPANY.—The following judgment was given in the Supreme Court, Montreal, by Judge Berthelot:

In this case, which has been tried before a jury, there were two motions—one by plaintiffs for judgment, and one by defendant for a new trial. The plaintiffs sued as the purchasers and owners of a quantity of coal oil, which had been stored in Middleton's warehouse and burned at the fire which took place there some time ago. There were various pleas; among the rest some raising the question whether the ownership of the oil was in the plaintiff, and whether there was as large a quantity as the latter claimed for. His Honour now said that the verdict of the Jury was doubtful upon the first question submitted to them as they merely said they believe that the plaintiffs were the proprietors of the oil; and positive on the second question that all the oil claimed for was destroyed by fire. Neither party was satisfied with the ruling of the learned Judge Monk. The plaintiffs had excepted to his statement that there was no evidence as to the quantity of the oil in the warehouse, and the defendant to the statement that there was evidence that the oil belonged to the plaintiffs. Graham on new trials, who was the best authority on the subject, said that in cases of verdict against evidence, the power to order a new trial was intended to give a remedy against the ignorance, prejudice, and carelessness of juries, and that the Judge was to exercise an effective control. The fact that there was some evidence on both sides did not exclude the power, and if the Judge conscientiously believed the verdict to be against the weight of evidence, he was bound to grant a new trial. Moreover, great attention was to be given to the opinion of the judge who presided at the trial, for if he were dissatisfied with the verdict, it would be a great inducement to send the case to another jury. Now in this case neither party was satisfied with the Judge's charge; but the learned Judge had distinctly stated his opinion that there was no proof as to the quantity of oil that was burned. For his own part he not only thought that there was no proof on that point, but he also doubted whether there was any sufficient proof of the proprietorship being in the plaintiff. As to the evidence about the quantity of the oil it was of the vaguest and most uncertain character. There was no evidence on which it was possible to rest for a determination on that head. Under these circumstances there was no other course than to reject the motion for the judgment, and to grant the application for a new trial.

The Canadian Monetary Times.

THURSDAY, DECEMBER 10, 1868.

THE DOMINION TELEGRAPH CO.

We have placed our readers in possession of the charges made against the promoters of the Dominion Telegraph Company, as well as the reply of the President of that Company. As the President puts it in his letter, the sum of the accusation is that "the Dominion Company is simply a second edition of an alleged old swindle, the Grand Trunk Telegraph Company of sixteen years ago, and that the same prominent actor, Mr. Snow, is again at work behind the scenes." The President denies that the Toronto Board are aware of the existence of Mr. Snow, and affirm that they are ignorant of any relationship existing between Mr. Snow and Mr. Reeve. After referring to the charge that "early last spring the Montreal Company was approached by Mr. Snow with a proposition that neither Company should reduce rates," he states the Dominion Company's charter was not obtained till the 25th of June, and the present Board was not organized till July. He assures the public that no portion of the work has yet been taken over from the contractors, nor will be until it has undergone a rigid inspection by thoroughly competent parties.

So far as we can learn it is admitted on all hands that competition in the telegraph business is likely to prove beneficial to the public, and were even Mr. Snow, with all his disagreeable associations, to build a line with his own money, no one would say a word against his doing so. But inasmuch as the Canadian public are asked to furnish the money necessary to secure the competition spoken of, it is incumbent upon us to prevent, if possible, an unworthy advantage being taken of public spirit, if such is attempted. We have no hesitation in saying we believe that Snow's operation of sixte years ago was an enormous swindle. If t Toronto Board of the Dominion Compa are not aware of the transaction with wh he had to do, we can refer them to plenty people who are fully competent to enligh them. We further believe that those Toronto gentlemen who constitute the Boar the Dominion Company are thoroug honest, and unlikely to take part in anyth that is a swindle or a sham, if aware t such is the character of an enterprise which they lend the sanction of their nan They would not and could not afford to pear as partners in a swindle. But, as g charges have been made; as the Board fess their ignorance of Snow and his tri as some of the directors have even confe an utter want of knowledge as to the af of the Company, and as a great many C dians have become shareholders in the pany, we are forced to examine the na of the charges and the evidence adduce their support.

In so far as the shareholders are concer the question to be settled is, has Mr. S any connection with the Company? in words, is the enterprise undertaken in faith? A second article in the Mon journal which made the attack on the minion Company is more explicit tha first that appeared. Fully conscious o benefits likely to accrue from compet duly appreciating the reduction in rate has been already brought about by t pearance of a rival, and not a littl picious of the quarter whence the came, we feel disposed to make allow for bias, and are all the more determi test as far as possible the truth of the ments made.

With this object in view, therefor have instituted inquiries, and have be liably informed as to the following On the 5th of February, 1868, a Cer and Articles of Association was exec Clifton, preparatory to the incorpora a company, to be called the Dominio graph Company. The Certificate state

"The names of the shareholders, a number of shares held by each respe at this time, are as follows, viz:

Josiah Snow	100
Wm. D. Snow	100
Thomas Wilson	5
E. W. Bromley	10
Zenas B. Lewis	5
W. W. Woodruff	5
G. W. Mastin	10

This document was witnessed by S. It would seem, however, that it v acted upon, or perhaps was withdraw

On the 28th of May, another Ce and Articles of Association were exe

on respecting the Dominion Company, g out that—

The names and places of residence of shareholders, and the number of shares by each respectively, at this time are llows, viz. :

as Wilson,	Clifton.....	5	shares
I. Bromley	"	10	"
s B. Lewis	"	5	"
V. Woodruff	"	5	"
V. Mastin	"	10	"
Reeve,	New York.....	150	"
S. Reeve	"	100	"

ing to informalities in this document, was rejected by the Department at Ottawa. he 17th June, a third application was with a new Certificate, in which the ving appeared :

"he names of the Shareholders and the er of shares held by each respectively s time, are as follows, viz. :

n Ryan.....	10	shares
Reeve.....	100	"
a Reeve.....9,890		"

e now in a position to sum up the case e prosecution. In the first application corporation by the Dominion Tele- Compaay the names of Josiah Snow V. D. Snow appear. In the second ap- on their names are omitted, and s. Selah Reeve and H. B. Reeve take places. In the third application the shareholders is reduced to three per- and those three are Messrs. Ryan, S. and H. B. Reeve.

evidence, which by the way is circum- d, shows, we think, that Snow had to th the starting of the Company. er his connection has ceased or not for the directors and stockholders to ine for themselves. There are the ounds for believing that none of the t directors were aware of the real when they allowed their names to be In fact Mr. Cayley assures the public e Board did not know such a man as even by name. Such an admission ave sounded very strangely in all the al towns in Canada, where the name w is still a household word, and is to be remembered for some time to Such an admission must in itself one much to shake confidence in Mr. 's sagacity and acquaintance with such rises as that with which he has allied . We have reason to believe that the rs are at last enlightened as to the te of affairs, and are puzzling their to find the solution of a rather diffi- oblem. In the meantime they are g by experience the very useful lesson efore permitting their names to be connection with any public enter- hey should be careful to see that they , either directly or indirectly, aiding adventurers to impose on the community. At various times we have called the attention of those whose names go forth to the public as endorsers for embryo enterprises or full-fledged companies, to the grave responsibilities they incur. The gentlemen on the Board of this Company cannot be considered as in fault to any greater degree than are many others occupying equally influential positions and equally honest. Their unwitting culpability is but the result of a practice which has had too many supporters, and if the lesson now learned produce its legitimate fruits, it will, though purchased by an unpleasant experience, have not been too dear.

BANK OF BRITISH NORTH AMERICA V. TORRANCE.

The action brought by the Bank of British North America against the Messrs. Torrance of Montreal, has given rise to a good deal of newspaper controversy which may justly be considered ill-timed, while legal proceedings are pending. The defendants have been induced to publish a letter explaining their position, and the manager of the Bank has also published a reply. The Messrs. Torrance state that in 1867, they employed a Mr. Yarwood to purchase grain for them in Ontario, on commission, and opened a credit for him of $45,000 with the Bank of Montreal at London. At the opening of Navigation orders were given to Mr. Yarwood to ship the grain purchased, but he informed the Messrs. Torrance that he had hypothecated a large portion of it to the British Bank "for his own private purposes." Being asked to assist in extricating him, the Messrs. Torrance accepted one bill for $10,000, and another for $9,000, which Yarwood undertook to provide for as they were for his accommodation. The day before the first bill became due, an accepted cheque for $10,000 was received from him, and a letter stating that it was to retire the draft, and advising that he had drawn upon the Messrs. Torrance, at three months, for $10,000. The remittance was put to Yarwood's credit in payment of the acceptance, and he was telegraphed that the draft would not be accepted. The Messrs. Torrance say :

"It subsequently appeared that the agent of the Bank of British North America had discounted Mr. Yarwood's bill upon us without knowing or asking whether we would honour it, carrying the proceeds to his credit, and accepting his cheque for $10,000, which he remitted to cover his engagement. The Bank now seeks to recover from us the money they thus gave to Mr. Yarwood, but which we consider no liability of ours, and we have also refused to accept a draft we never, directly or indirectly, came under the slightest obligation to honour."

"As our private affairs have thus been partially disclosed, we will finish the story by giving the financial results of the whole transaction. In order to get possession of our property, we had to pay in addition to the whole cost and value of it, the sum of $9,000 to the Bank of British North America, and we narrowly escaped having to pay the institution $10,000 more, which it is now endeavouring to collect by legal process. What success will attend such an attempt remains to be seen."

Mr. Hooper, the manager of the British Bank at Montreal, gives his side of the case thus : the evidence established that the drawing by Yarwood of the drafts for $10,000 and $9,000, was the result of an arrangement privately made between Yarwood and the Messrs. Torrance, to the effect that the latter would accept his drafts to the extent of $25,000, on the sole security of a life policy for $25,000 which Yarwood promised to send them. The immediate effect of the discounting of these drafts was to enable the Messrs. Torrance to get possession of grain to the value of $19,000. When the discount was given the Bank knew nothing of the arrangement referred to. When the $10,000 draft was near maturity, the Bank discounted a new draft for Yarwood, and accepted a check for $10,000, payable in Montreal to the order of D. Torrance & Co., on the faith of Yarwood's representation and undertaking that the Messrs. Torrance would accept the new draft. Yarwood forwarded the accepted cheque to the Messrs. Torrance. Instead of depositing the cheque in bank, as is customary, the Messrs. Torrance cashed it, at the same time keeping the draft in their possession for twenty-four hours and concealing from the Bank their predetermination not to accept it. Before the proceeds of the cheque were applied to retire the draft the Messrs. Torrance were notified by the Bank of all the circumstances, and forbidden to use the proceeds of the cheque without accepting the draft. The financial result of the transaction was that the Messrs. Torrance received payment at the expense of the Bank of $10,000 of bad debts due them by Yarwood, and by the payment of only $9,000 secured possession of grain of the value of $19,000. Mr. Hooper considers that the Messrs. Torrance "were both legally and morally bound to accept the draft in question, or restore to the Bank the money which they received from it on the faith that they would duly accept the draft."

The Messrs. Torrance allege that, out of courtesy to the bank, they did give early intimation of their probable refusal to accept the draft, and that if Yarwood had offered any good security for his new draft, they would have accepted it.

ENGLISH MONEY MARKET.

A change has at length come over the English money market. After continuing at 2 per cent. for sixty-nine weeks, the rate of discount at the Bank of England advanced to 2½ per cent. and subsequently to 3 per cent., as the cable dispatches inform us. The rate was never longer than thirty-seven weeks continuously at 2 per cent. in the previous history of the Bank. This fact goes to strengthen the statement that the panic of 1866 was more severe than any of its predecessors.

This anxiously expected change has not arisen from an increase in the demand for money for the purposes of trade, but resulted from a large withdrawal of gold for Russia, the amount of which is, it is said, almost unprecedented in a single transaction. During the week ending on the 18th November, the stock of coin and bullion in the bank was withdrawn to an amount exceeding one million pounds.

MINING IN NOVA SCOTIA.

We did not intend that our remarks in the last number of this Journal should be construed as depreciatory of gold mining in Nova Scotia. The fact that gold has been found there in quantities is proved beyond a doubt. Dr. Sterry Hunt, in his report on that region, states: "It may be affirmed that the average yield of gold to the ton in Nova Scotia, and also to each miner, is greater in Nova Scotia than in any other auriferous region known." What we did intend to convey was, that parties desirous of investing in gold mining enterprises should make themselves fully acquainted with the preliminary arrangements attendant upon the formation of the Companies they go into.

THE NARROW GAUGE RAILWAYS.

The By-Laws authorising the issue of debentures in aid of the Toronto, Grey and Bruce, and the Toronto and Nipissing Railways, were sanctioned by a vote of the property owners of Toronto, on the 8th inst. The opposition was trifling, as it is generally conceded that the construction of these roads would be of immense benefit to the City. We are glad to see that steps are being taken to legalize the By-Laws passed to aid these undertakings and to obviate the difficulties which we pointed out in a previous number.

—Mr. McCracken, of the Gore Bank, has resigned his situation and accepted an engagement from the Royal Canadian.

CLOSE OF NAVIGATION.

All the channels of navigation are now closed, and vessels, with few exceptions, have been dismantled for winter. The past season has been a very unsuccessful one for vessel property in general. Where vessel owners handled their own cargoes, a little money may have been made; all others have lost. A great deal of disappointment has been occasioned by the speculative policy of Western grain dealers in holding back the produce of the west from finding its way to the seaboard. This illegitimate kind of business has been carried to a greater extent this year than probably ever before, and must be attended by correspondingly augmented losses; this, and other causes, have made the past few seasons most unsatisfactory to vessel owners, so that they are now fairly disheartened, and until a change for the better occurs, we need not expect to see any increase in the tonnage of our lake marine.

—Mr. Fitzgerald, of the Royal Canadian Agency at Brampton, has been appointed to the Kingston Agency.

—We notice among our exchanges the *Chronicle*, of Chicago, an insurance journal, which seems to be flourishing, and has lately increased its size by four pages. Our enterprising contemporary has our best wishes for its success.

ÆTNA LIFE INSURANCE CO.—The following paragraph from the Montreal *News* should prove a warning to newspapers disposed to plunge into insurance matters without being possessed of the information necessary to sustain their conclusions:

"As articles derogatory to this Company have at various times appeared in these columns, which were written without a full knowledge of all the facts discussed, and would not have been published had we possessed the data now within our reach, we feel it due to that Company, and our own character for truthfulness, to state that we are not aware of anything in the standing or business of the Ætna Life Assurance Company which the public could have cause to distrust."

Financial.

MONTREAL MONEY MARKET.

(From our own Correspondent.)

Montreal, Dec. 8, 1868.

The fourth of the month (the day on which bills generally fall due) passed off without any pressure on the banks, and the market is still very easy. The old difficulty remains as how to invest money at short dates with the chance of any profitable return. Stocks are high and all available securities command such rates that they offer but low interests. There is also plenty of money on the look-out for good permanent investments, but capitalists are very cautious in their investments, hence the large amount at the credit of the "deposit account" in the banks. Before spring we will assuredly plenty of schemes to tempt the cupidity of moneyed men. I give the latest quotation our leading stocks: Bank of Montreal scarce 138¾ to 139; City firm at 102 to 102½; People demand at 107, with considerable sales at rate; Merchants' inquired for at 112½, but ho ask 113½; British nominally 101, and To 120, which price would be readily paid; U nominal at 104½ to 106; Molson's has been p at 110; Jacques Cartier quiet at 106 to 107. other stocks: Telegraph is easier, seller's at ; but buyers at 135; Richelieu Co. dull at 1 118½; City Railroad, 110 to 110¼; Cana Navigation Co. have sold at 108; Mon mining consols, $2 25 to $3.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Considerable business has been done in stocks this week, and prices have been well tained with the exception of Royal Cana which has declined 4 per cent.

Bank Stocks.—Montreal has been sold a but closed with buyers at 138 and sell 138½. No British in market—buyers give 105. There were large transactio Ontario at 99½, 100, and 100¼, closing firm latter rate. No Toronto in market, buyers give 120¼, but none in market. Royal Ca has been sold during the week at 85½, 86 and 87; sellers generally asking the latte Numerous sales of Commerce occurred at 1 and 105½, the latter rate is freely offered. are sellers of Gore at 42½, and no buyers ov Merchants is offered at 113½, and buyers 113. Buyers offer 109½ for Molson's, an for City, but no sellers of either. The buyers of Du Peuple at 106½, and of Natio 105, no sellers. There are sellers of J Cartier at 107, and buyers at 106. Selle 106 for Union, with buyers at 104½.

Debentures.—Sales of Dominion stock o at 105, no sterling bonds on market. T have been sold to pay 6¾ per cent. to pure County have been almost entirely withdraw the market, but would command high rat

Sundries.—City Gas is much enquired fo in market. There were transactions in Permanent Building Society at 124½ to 125 are now buyers at the latter rate. No V Canada in market; 116 would readily b Several sales of Freehold occurred at 104 t and the latter price would still be paid. offer 136 for Montreal Telegraph, with s 140. Small sales of Canada Landed Cr enrred at 71 to 72. There are buyers of America Ass. at 54 to 55, and sellers at 5 Mortgages are readily taken at 8 per cent. is freely offered on good security.

AUDIT OF BANKING BALANCE SHEET have frequently called attention to the n of providing a specified form of balance-s all banking Companies, and have also poi that shareholders have no security with efficient and independent audit.—*Investor dian.*

ETY IN BANKING.—A crisis similar to our as experienced in Canada in 1866, and gave ta legislative inquiry. In answer to cer- uestions of the Committee of the Senate, Hague, cashier of the Bank of Toronto, of the powers of legislation in reference regulation of the business of the banker. opinion it would be impossible to devise hich would prevent bank failures. These tirely from bad management, which can- restrained by Act of Parliament, and which roduce its natural effect in the end. One most important measures within reach e to require frequent returns, exhibiting sition of the business, which would exer- corrective and restraining influence upon ks themselves, and would be a great benefit ublic, the customers, and the shareholders. ese should be furnished in such detail as to intelligible, the model taken in this in- eing the accounts of the Bank of France. Mr. Hague recommends for Canada we dvocate at home. Our banking system be placed on the footing of the Bank of l in this respect, but the greater detail of nk of France would be necessary. The s thus carried on under constant public in- th, in the open light of day, could in future e machinations of the evil-minded, who succeed by mystery and darkness. Our system would by this means attain a of safety which might even reconcile the England directors. It would prove as a protection to credit in its latest form as of 1844 has been in another way.—*Bul-*

RY CAUTIOUS OLD LADY.—During the n New Brunswick, a customer of one of John banks declined to take American notes on the ground that it was always up and down." The good lady demanded ens.

Railway News.

NORTHERN RAILWAY.—Traffic receipts for week ending Nov. 28, 1868.

Passengers	$3,330 68
Freight	3,474 71
Mails and Sundries	441 99
Total Receipts for week	$7,247 38
Corresponding week 1867	8,013 00
Decrease	$765 62

GREAT WESTERN RAILWAY.—Traffic for week ending Nov. 20, 1868.

Passengers	$31,644 40
Freight and live stock	41,024 52
Mails and sundries	1,339 92
	$74,008 84
Corresponding Week of '67.	73,734 17
Increase	$274 67

— The Township of Markham has passed a by-law granting $30,000 to the Toronto and Nipissing Railway. In Brock Township, a by-law granting $58,000 to the same road, has been defeated.

OVERLAND ROUTE THROUGH BRITISH AMERICA.—Mr. Waddington's pamphlet advocates a line from Ottawa into Hudson's Bay Territory to the north of Lake Superior to the Red River Settlement, whence it branches to the north through a belt of fertile country, and reaches British Columbia near the site of the gold diggings at the source of the Fraser. The cost of a single line from Ottawa to Head of Bute Inlet, 2,885 miles, 4ft. 8½in. gauge, he estimates at $130,150,000, or say 27 millions sterling but if with a 3ft. 6in. gauge it would be less. This he proposes should be carried out by a company, the Government issuing bonds guaranteed a fix rate of interest in much the same way as the Union Pacific is being carried out.

CANADA CENTRAL RAILWAY.—We are glad to learn says the Ottawa *Citizen*, that Mr. Abbott, who went some short time ago to England on business connected with this road, has returned, after successfully carrying out the objects of his journey. The work on the line will now be pushed forward with all celerity towards completion.

NEW BRIDGE ON THE BUFFALO AND LAKE HURON RAILWAY AT PARIS.—The new bridge for Buffalo and Lake Huron Railway across the Grand River at Paris, which has been in course of erection for more than a year, is completed. It is built of wood, on the Howe Truss principle, supported on stone piers 66 feet high, and spans the river with five arches. The total length is 775 feet 1 inch; the width 18 feet 6 inches, and the height from the stonework to the rails 24 feet 9 inches, so that the rails are 90 feet above the water. The spans vary somewhat in length, the dimensions being as follows: commencing at the east end—No. 1. 158 feet 5 inches; No. 2. 165 feet; No. 3. 156 feet 5 inches; No. 4. 162 feet 3 inches, and No. 5. 126 feet. On each side of the track there is a sidewalk 5 feet high, and a chain on each side of the bridge, supported in iron pillars, to protect passengers from falling over.

The bridge rests upon the place which supported the one it replaces, and the trains had to be kept running during the whole process of reconstruction. In order to effect this, one span was only operated on at a time. A tressel bridge was first erected from one pier to another to support the track, the old timbers were then taken down, and the new ones put in their places, lastly; the tressels were taken down. The same process was pursued with each successive span till the whole was renewed.

Mr. Yates, of Brantford, was the contractor, and Mr. James Finney superintended the work.

The bridge just completed is the fourteenth bridge on the Buffalo and Lake Huron line, which has been rebuilt since the railway was leased by the Grand Trunk Railway Company.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Dec. 8, 1868.

The winter is fairly upon us, and our merchants have begun to reckon the profits or losses on the year's operations.

DRY GOODS.—Taken altogether, a fair trade was done in this branch; not equal in extent to former years, but larger than the most sanguine anticipated. For some years past Montreal has almost had a monopoly of this particular branch of business, few purchases being made in the States; the style of goods suitable for Canada, differing essentially from those imported by the Americans. Toronto and the western towns purchased sparingly at home, finding Montreal, as a general rule, a better market, so that our merchants have been led to import heavily, in fact more than the country could bear; profits for the years 1864, '65 and '66 being large, consequently, as is always the case after three successful years, in 1867, the imports were so entirely in excess of the requirements, that our merchants found themselves hampered at the close of that year with very heavy stocks. Those who had capital held on to their goods, but others were obliged to realize. The losses were very heavy. Another element, on which they did not sufficiently calculate, came into play. The west had gradually been creeping up from its many disastrous years of short crops, over land speculation, and over trading; and your Toronto merchants, never favorable to Montreal, seeing the profits of dry goods men, bought largely in the English markets, and entered into a lively competition in our best district, viz: the western section of Canada, so that it was only by forcing off our goods, and by dint of superior capital, enabling us to give long credits, and renew notes falling due, in many cases in full, that we have been enabled to work off our stocks.

The experience of 1867 taught wisdom to our importers, and consequently our imports during this year were very light, and sales were made with not only a due regard to profits, but also to the standing of the parties to whom they were made, so that the business, although much less in amount, has left a larger profit to our merchants than for some two years back. During the fall country remittances have been better than usual; the season closed with light stocks and a healthy tone of the market. I note that the Toronto Dry Goods men have imported considerably, but seemingly have not worked off their stocks so successfully, as I see that one large firm has offered a large quantity of goods by auction, which sale by your papers has proved a great success, thus shewing that the country merchants are not overstocked. Some few years ago Geo. Winks & Co., of this city, tried the experiment of selling their then large stock of dry goods by auction, but the result was not such as to warrant the attempt being repeated; in England such sales are of daily occurrence, but here they are regarded as an expedient for raising the wind, and any house loses cast that attempts them. Why it should be so I cannot say, for I see no difference between placing a cargo of groceries at auction and disposing of a heavy stock of silks, cottons, &c., however, we must bend the neck to the laws of custom. To-day I have only space to touch lightly on the dry goods trade. In my future letters I shall deal with hardware and our local manufactures. In the latter I feel sure that I can find many topics of interest to your western readers.

PRODUCE.—Business in Produce is very dull, and prices of Flour rule much the same as last week, Extras being $5.50 to $5.75; Fancy, $5 to $5.10, and Supers, No. 1, $4.80 to $4.90, while Strong Bakers have ranged from $5 to $5.05; but the trade is pretty well supplied, and the demand is consequently light. Supers No. 2, $4.40 to $4.50. No demand for the lower grades, and no lots of any description pressing on the market. The market for grain of all descriptions is very dull, and prices are purely nominal. Wheat, U.C. Spring, $1.08 to $1.10; U.C. Red Winter, $1.10; Chicago No. 2, $1.08. Peas, 60 lbs—92c to 94c. Corn, 56 lbs Mixed Western, 87½c to 90c. Barley, 48 lbs—$1,20 to $1.30 for ordinary. Oats, 32 lbs—47c to 48c. No Rye. Provisions are also very quiet, and it is difficult to give quotations. In Pork, little is doing, and our Ottawa lumbermen are not yet in the market, the winter roads to the shanties not being opened out; we want more cold weather and snow to make them passable. The swamps are barely frozen over, and in the woods the snow is not deep enough to cover the inequalities of the usual rough bush roads. Mess Pork is worth $23.75 to $24; Thin Mess, $21 to $22; Prime Mess and Prime nominal. Dressed Hogs, for which there is a fair demand, are worth, heavy, $7.50 to $8; medium, $7 to $7.50; light, $6.87½ to $7. Dairy produce remains very quiet. Butter, best quality, would sell readily to the grocers, but shipping lots are in no demand; the price is purely nominal. Factory Cheese sells at 11c to 12c for best brands. Ashes are very dull at, first Pots, $5.62½ to $5.65; seconds, $4.80 to $4.85; Pearls, $5.50 for firsts, and no seconds offering.

Petroleum.

Receipts at New York for the week ending Dec. 1 .....pkgs.	11,701
Exports from New York for the week ending Nov. 24.....galls.	733,348
Exports from N. York, Jan. 1.. galls.	48,929,001

Toronto Market.

Snow has fallen liberally, and winter has fairly set in.

BOOTS AND SHOES.—Trade continues good; quotations are slightly altered, as shown in our price list.

GROCERIES.—*Sugars* are steady and without change. There is more demand for raw Sugars, owing to small local supplies, and a number of job lots have been readily placed. There is a steady demand for refined at unchanged prices. *Teas* are very lively, in consequence of a good demand for both city and country trade. The export demand noticed a few weeks since has entirely ceased, the supplies in the New York market having increased, and so lessened the demand on this and other Canadian markets. Were it not for the American differential duty of 10 per cent., our dealers could still ship to that market, and make a fair profit. There is a specially large demand for uncolored Japans, and several job lots have been placed at 57c to 60c. A Tea that is good value at these price is constantly in demand. We note some enquiry for the higher grades of Japan Teas for the Province of Quebec. *Fruit*—The enquiry is good, as is usual at this season; prices unchanged. There is a speculative demand for Layer Raisins in Montreal, and two lots of 4,000 and 5,000 boxes changed hands at $1.85. *Fish*—Fish seem to be going more generally into consumption, and consequently a larger trade has been done this year than for a long time before. Split Labrador Herrings are worth $5.75 to 6.50, and round, $4 to $4.75. *Rice* is 5c to 10c higher per 100 pounds, and in good demand. *Syrups*—The better quality of Molasses and Syrups are in good demand; refinery Syrups are up 2c per gallon since last week. *Tobaccos*—4's have advanced at the factories 1c per pound on last week, and the demand is very good. *Coffees*—Not much doing; the demand seems to grow less every year. We give imports of groceries and liquors at Toronto for November:

DRY GOODS. The trade sale at the stores of Messrs. Gordon & McKay is the only occurrence of the week worthy of notice. At that sale there was a large attendance of buyers, the bidding was spirited, and a very considerable quantity of goods was placed at fair prices. As the first venture of the kind in Toronto for a long time, we are glad to be able to report it such a success. The imports of Dry Goods at this port for November were:—

Imports of Dry Goods.

	1867.	1868.
Manufactures of Woolens.....$31,344		$36,527
Do. Cottons.....	35,472	52,821
Do. Silks and Velvets....	10,587	13,654
Do. Furs	1,019	3,050
Wearing Apparel.....	521	95

GRAIN.—*Wheat*—Receipts light; Spring nominal at $1 to $.06, and fall at $.05 to $1.15. *Barley*—There is a fair demand, but little offering; $1.26 was paid for waggon loads. *Peas* dull at 80c to 82c. *Oats* steady at 52c to 53c.

FLOUR—No. 1 Superfine is offered at $4.70, with buyers at $4.50 to $4.65; there is some demand for the Lower Provinces; nothing doing in Extra or any of the other grades.

PROVISIONS.—*Dressed Hogs* are now coming in pretty freely, and the market is 50c. better at quotations. *Butter* nominal, only a retail business doing. *Cheese* offering at 11c to 11½c. *Mess Pork* nominal at $22 to $22.50; prime Mess, $18; Extra Prime, $16 to $17. *Live Hogs* nominal at $5.20 to $5.40.

PETROLEUM.—There is a steady demand at quotations. The market is a little lower.

LEATHER.—The trade is quiet, at unchanged prices.

FREIGHTS.—Navigation is now closed. Rates by Grand Trunk Railway—Flour to all stations from Belleville to Lynn, inclusive, 35c.; grain per 100 lbs 18c; flour to Brockville and Cornwall, inclusive, 43c, grain 22c; flour to Montreal 50c, grain 25c; flour to all stations between Island Pond and Portland, inclusive, 85c, grain 43c; flour to Boston $1.15 U.S. currency; flour to Halifax 95c, grain —c; flour to St. John, 85c. Boxed meats and butter to Liverpool per gross ton, 80s; lard or butter in tinnets, 85s; pork, 10s 6d per ti flour, 6s 6d per barrel; grain, 12s 6d per pounds. Rates by Great Western Railw Flour, Toronto to Suspension Bridge, 25c thence to New York, 76c U.S. currency per to Boston, 86c. Rates from Toronto to pool are—Beef, bacon and pork, 93c, gol 100 lbs; lard, in barrels and tierces, 98c do; in kegs or tinnets, $1.00 do; butter and c $1.38 do.

Halifax Market.

BREADSTUFFS.—Dec. 1.—Flour still con to arrive freely, and the demand is good, w change in price. Canada No. 1 ranges from to $6.50; Strong Bakers, $6.65 to $6.70; Canada, $7.50 to $8.00; Extra State sti tinues dull at $6.00 to $6.40, according to q No. 2 in good demand at $5.00 to $5.50. meal without change, at $4.50 for kiln dri $4.25 for Fresh Ground. Oatmeal, $8.00. ports from January 1st to December 1st and 1868:—

	Bbls Flour.	Bbls. Oa
1868.....	169,327	48,1
1867...	179,940	33,9

FISH.—Codfish firm and in demand at $4 $4.24 for good large shore; $3.20 to $3.30 f small shore; Labrador, $2.25 to $2.50. and Bay none. Good hard cure Aricha dock, $2.00 to $2.10; Eastern Shore, $ $1.90; Western, $1.60 to $1.65; Pollock to $1.50. Herring in demand at $4.50 t for Labrador, and $4.00 to $4.50 for shore. erel scarce and in demand. No shore. B to $16 for No. 1; $13 to $14 for No. 2; $ for No. 3. Salmon, $15 for No. 1; $13 2, and $10 for No. 3.

WEST INDIA PRODUCE.—Sugars and M continue in fair demand at quotations. W Porto Rico 6¼c to 6½c; Barbadoes, 3¾c Cuba, 5¼c to 5¾c; Centrifugal Cuba, 6c Rum scarce and in demand at 70c to 75c merara, and 60c to 65c for St. Iago.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Company.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Clifton (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith.

A permanent connection has also been secured with the Great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with all the Lake Ports and other places through the North western States, and through to California.

ÆTNA

Live Stock Insurance Company

LICENSED BY THE DOMINION GOVERNMENT TO DO BUSINESS IN CANADA.

THE following Accidents, this month, show the importance of Insuring your Horses and Cattle against Death from any cause, or Theft, in the Ætna Insurance Company:

MONTREAL, September 16, 1868.

At a fire last night, in the sheds behind Ripin's Hotel, St. Joseph Street, three valuable Stock Horses were destroyed, "Young Clydesdale" and "Emigrant," belonging to the Huntingdon Agricultural Society—the former worth $900, and the latter $1,700; and "Old Beauharnois" cost $1,000, belonging to the Beauharnois Society.

PORT COLBORNE, September 18, 1868.

HORSES DROWNED.—Two horses belonging to Mr. Briggs, of Port Colborne, and four owned by Mr. Julion, of Port Dalhousie, were drowned in the Canal, near the Junction, early this morning.

A fire at the Glasgow Hotel, Montreal, this morning, destroyed two horses. The fire was caused by drunkenness on the part of the stable man.

MONTREAL, September 24, 1868.

A fire in F. X. Cusson's stables, St. Joseph Street, last night, destroyed three horses.

with which is united the
BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG.:
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News*: and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing, —I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern*:.

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.
Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.
Toronto, Dec. 3. 1867. 16-1y

Life Association of Scotland.

INVESTED FUNDS

UPWARDS OF £1,000,000 *STERLING.*

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS

Are applied on a special system for the Policy-holder's

PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,

WITH THE OPTION OF

LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains

A LARGE REDUCTION OF PRESENT OUTLAY

OR

A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,

Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in tact for Policy-holder's heirs, or other purposes.

Accumulated Fund, $2,000,000, *Income*, $1,000,000.

THIS Company, established in 1851, is one of the m reliable Companies doing business in the country, a has been steadily prospering. The *Massachusetts Insura Reports* show that in nearly all important matters it superior to the general average of Companies. It offers intending assurers the following reasons, amongst othe for preferring it to other companies:

It is purely Mutual It allows the Insured to tra and reside in any portion of the United States and Euro It throws out almost all restriction on occupation from Policies. It will, if desired, take a note for part of Premium, thus combining all the advantages of a note a all cash company. Its Dividends are declared annua and applied in reduction of Premium. Its Dividends in every case on Premiums paid. The Dividends of PHŒNIX have averaged fifty per cent. yearly. In settlement of Policies, a Dividend will be allowed for e year the policy has been in force. The number of Di dends will always equal the outstanding Notes. It pays losses promptly—during its existence never having c tested a claim. It issues Policies for the benefit of M ried Women beyond the reach of their husband's credit Creditors may also insure the lives of Debtors. Its Polic are all *Non-forfeiting*, as it always allows the assured surrender his Policy, should he desire, the Company g ing a paid-up Policy therefor. This important feat will commend itself to all. The inducements now offe by the PHŒNIX are better and more liberal than those any other Company. Its rate of Mortality is exceedin low and under the average.

Parties contemplating *Life Insurance* will find it to t interest to call and examine our system. Policies issu payable either in *Gold* or American currency.

PROSPECTUS

OF THE

OMINION EXPRESS COMPANY OF CANADA

ORGANIZED UNDER THE JOINT STOCK COMPANIES' ACTS.

CAPITAL STOCK, ... $1,000,000,

In 10,000 Shares, $100 each.

s proposed to organize a DOMINION EXPRESS COMPANY, to meet the present and prospective demand for increased facilities of general transportation. It is the interest of Canadians to do their own work, and *accumulate* cash capital, and *one* of the objects of this scheme is the retention s country of the profits arising from the business done.

Express Companies obtain "four-fifths" of their business from merchants and bankers, and no reason exists why they cannot transport their own by their *own Agents, economically* and *efficiently*, and by a *union of capital* and *effort*, they hereby resolve so to do. Being thus united, and ng to it their business and influence, secures to this Company certain and complete success.

his organization, like the mail system, is to extend, under *one general management*, to all cities, towns and villages in the Dominion, and to connect parts of the United States, and being but "one Company," will secure *unity, despatch* and *accuracy*.

t is proposed to distribute the stock widely, throughout the Dominion, in limited sums, apportioned as nearly as practicable to the business of the ribers. The capital Stock of the Company to be not less than $1,000,000, in 10,000 shares of $100 each.

Ten per cent. of the stock subscribed will be required to be paid after the subscription shall have reached the sum of $250,000, and after a Charter have been obtained, of which due notice will be given to the subscribers; the subsequent calls, not exceeding *ten per cent. at any one time*, to be at convenient intervals, as the demands on the Company may require. But the aggregate of all calls to be made will, it is believed, not exceed *per cent.* of the Capital Stock.

he business to be done strictly on *cash principles*. With a paying business assured from the start, by *interested* and *reliable* Stockholders, it will se seen that a small per centage *only* of the subscriptions will be required to put the Company in working order, and it is confidently and reasonably ied that the receipts will thereafter maintain and extend it. And in order to secure an equitable voice in its management, the principal commercial nts will be represented at the Board, by Directors recommended by Stockholders of their own localities, who will also recommend to the Direction cal Agents, and thus secure a general influence in its management, as well as its business.

ll Express enterprises, both in this country and the United States, have been decidedly successful, resulting from the profits of the business itself; aving an organization and a share list—such as are now proposed—with energy and economy in the direction, no doubt can be entertained of the satisfactory results.

ith such prospects, the Merchants of the Dominion, Capitalists and others interested in the success of this enterprise, are invited to become tockholders.

The following shall be included in the By-Laws to be hereafter framed for the Government of the Company:

The Company shall be known by the name or title of "THE DOMINION EXPRESS COMPANY OF CANADA."

The Capital Stock of the Company shall be *One Million of Dollars*, divided into *Ten Thousand Shares of One Hundred Dollars each.*

Each Shareholder shall be liable only for the amount of Stock subscribed by him, her, or them.

The Shares of Stock of the Company shall be transferable; but no transfer shall be valid without the consent of the Directors, in writing, unless ares shall be paid up in full.

It shall be lawful for the Stockholders, so soon as the sum of two hundred and fifty thousand dollars shall have been subscribed, to call a General eeting of the subscribers, to be held at the office of the Company, in the City of Montreal, and proceed to elect nine qualified persons to be Directors t Company, each of whom to be a proprietor of not less than ten Shares of Stock of the said Company, and three of whom shall form a quorum, ith all the powers of the Directors. The said Directors shall also, at their first General Meeting, elect a President, Secretary, Treasurer, and General upintendent or Managing Director, from amongst themselves.

The said Directors so elected shall proceed, without delay, to frame all necessary By-laws to govern the Company, and shall have power to alter nd mend the same as circumstances may require.

The Directors shall not have power either to *sell out* the said Company to any other Express Company or organization now in existence, or hereafter to be incorporated, or to amalgamate with any other Express Company.

No Stockholder shall be at liberty to hold in his, her, or their name, more than one hundred shares of the Capital Stock of the said Company, ithout the consent of the Directors, in writing, first having been obtained.

PROVISIONAL DIRECTORS.

Return Premium, 1867 (present value)	565,468 00	
		$7,517,328 32
Divisible Surplus		$1,642,425 59

During the Year, 6,597 Policies have been issued, insuring $22,541,940.

The Progress of the Company for the Past Four Years will be seen in the following Statement:—

	Assets.	Increase of Assets over previous year.		Assets.	Increase of Assets over previous year.
1864	$3,658,755 55	$1,005,217 63	1866	6,727,816 65	1,845,896 95
1865	4,881,919 70	1,223,164 15	1867	8,774,326 01	2,046,509 36
		Total increase	$6,120,788 69.		

One of the special features of this Company is the TEN YEAR NON-FORFEITUR PLAN.

The system popularly termed "The Non-Forfeiture Plan," was originated and first presented to the public by this Company, in their well-kn "TEN YEAR NON-FORFEITURE POLICY," in the year 1860; and its perfect adaptation to the wants of every class in the community, obvia every reasonable objection to Life Insurance, is shown from the fact that every other American Company has been compelled, in deference to p opinion, to adopt it, although in many cases it is done in such a way as considerably to impair its value. It has received the *unqualified approval o best business men of the land*, large numbers of whom have taken out policies under it, simply as an investment.

By the Table on which this class of Policies is based, a person incurs no risk in taking out a policy. Insuring to-day for $10,000, if he should die to-morrow, the $ immediately becomes a claim; and if he shall live ten years, and make ten annual payments, his policy will be paid for, and his dividends *still continue*, making

HIS LIFE POLICY A SOURCE OF INCOME TO HIM WHILE LIVING.

By the specific terms of these policies, and not by vague and indefinite statements made in circulars, a party after the second year does not forfeit what he has paid in prem Thus, if one insuring by this plan for $10,000 discontinues after the second year, he is entitled to a PAID-UP POLICY, according to the number of full years paid in, as follow

Second year, two-tenths of $10,000 (amount insured), amounting to.. $2,000	Fourth year, four-tenths of $10,000 (amount insured), amounting to.. $4,000
Third year, three-tenths of $10,000 (amount insured), amounting to.. 3,000	Fifth year, five-tenths of $10,000 (amount insured), amounting to.... 5,000

And so on, until the tenth annual payment, *when all is paid*. The paid up policies, for the proportionate partial payments, as well as for the full amount, participate Dividends of the Company during the whole existence of the policies. ☞ This being a purely mutual Company, ALL ITS PROFITS ARE DIVIDED AMONG THE ASSU

Financial.

PRINCIPLES OF BANKING.

(Continued.)

The function of Government in the creation of a symbolic currency is almost equally restricted. The test of value of such a currency is that of the loanable capital it represents. Now the only parties capable of deciding whether paper currencies represent an adequate amount of capital, are those parties who are to receive them. It would be very ridiculous for Government to attempt, by legislative enactment, to secure the more certain payment of bills of exchange drawn in commerce between nations. None are so able to secure such provision as the parties to them. If currencies were the representative of gold and silver only, and not (as is the fact) of all kinds of loanable property, then the functions of Government would be plain. All it would have to do would be to restrict the issue of banks to the coin in their vaults. But who shall decide whether it is proper for a bank to make a loan by an issue of its notes and credits to a party offering it a bill given for a thousand barrels of flour? Of course, those only who, from their intimate connection with the trade, commerce and industry of the country, are in a position to determine whether the purchaser of the flour will be probably able to sell the same and collect the proceeds before the maturity of his note. Government can have no such intelligence or functions as these—in fact, it does not attempt to assume any control over the greater portion of the symbolic currency in use—the credits which banks write on their books. Only a very small proportion of the transfers of property are effected by bank notes. Outside of these, the amount of currency that may be issued is left, as it should be, to the discretion of banks. The operation of natural laws will secure the conditions necessary to a perfect currency far more effectually and completely than they can possibly be secured by any act or oversight of Government.

If Government assumes to interfere with the currency, its most important function would be the restriction of loans to bills receivable soon to mature, and given for loanable property. With such provision, rigidly enforced, there never could be an inflation, But unfortunately, the action of Government is always sought in a contrary direction—to authorize an expansion, which sooner or latter must be followed by a correspouding revulsion; but often not before society is so exhausted that years are required to repair the losses sustained, The Bank of England, for example, is authorized to issue notes to the amount of $75,000,000 upon the strength of having the possession of a corresponding amount of Government debt, redeemable only at the pleasure of the latter. This vast sum, although not the representative of loanable capital, exerts, from the circulation obtained for the notes issued, precisely the effect, for the time being, of so much capital. An extraordinary stimulus is given to every kind of investment and expenditure, without the addition of a penny to the means of consumption, It gradually comes to be seen that the inflation has led to the construction of too many ships and railroads; to the manufacture of too much iron and cloth; that too much money had been invested in schemes which never should, and never would, have been entertained, but for the disproportion created between the instruments and means of expenditure. As soon as people get their eyes open, each one endeavors to protect himself by converting his means into money, The bank puts up its rate of interest and calls in its loans, which only serve to increase the alarm and the drain upon it for gold, and the interposition of Government has to be invoked to allow the bank to transcend its chartered powers, by making loans irrespective of the amount of means it may possess, But all this does not prevent a crisis, which drives no small proportion of the community into liquidation. With the consequent prostration of business, money becomes a drug; the rate of interest is reduced to a minimum, to stimulate its use, when the past experience of inflation and contraction is repeated with all its attendant evils, but unfortunately, without teaching any useful lesson.

Now, if the $75,000,000 issued on Government securities, had represented loanable capital, either in its vaults or in the hands of its borrowers, there could have been no currency inflation, consequently no excessive contraction. The enterprises which this sum had set in motion would have rested on a solid basis—would have measured the ability of the people to consume, and would have exerted none other than a beneficent influence in the channels of business and trade.

The amount of reserves of loanable capital necessary to be kept on hand by banks to meet the calls to which they are constantly liable is a matter of experience, rather than of theoretical calculation. It will depend very much upon the character of the loans made. As the balance of indebtedness between the banks and the public is always in favor of the former to the extent of their capital, it follows that if their loans are made to solvent parties, they can always place themselves in funds from the payment of their bills. The reserves in such case will have to be only nominal. But as improper loans will always be made, involving corresponding disturbances in industries and commerce, reserves must be maintained to considerable amounts to meet such contingencies.

As the foreign commerce of a people is quite as much to be considered in making loans, as their domestic trade, reserves should be chiefly maintained in the great *entrepôts* of such commerce. The rule of the New York banks, before the suspension of specie payments, was to maintain reserves in coin equal to twenty-five per cent. of their immediate liabilities. The coin held by the country banks was much less, their reserves being made up chiefly of balances against the city banks. The great majority of the country banks held an amount of coin only necessary for ordinary payments by way of change. Banks are not necessarily strong in proportion to the amount of coin they may hold, but in ratio to the amount of promises of solvent parties to pay gold on demand. But as before remarked, the amount of reserves must be a matter of experience with banks, as with merchants. When there is no Government interference, and when perfect freedom of action is accorded, reserves will always be in a proper ratio to the demands likely to be made. People have only to be left alone, to adopt the best means to given ends, whether such be the construction of a steamboat, a railroad, or any other contriv-

ance, the object of which is to facilitate the exchange of property, or promote their own welfare. Symbolic currencies will be good just in ratio as they express the business transactions of a people. There is great probability that they will be bad just in ratio to the degree of governmental interference with them. Like all commercial contrivances—such as bills of exchange, steamships, and railways—their creation should be left entirely to the parties who are to use them.

The most perfect system of currency yet devised is that which so long prevailed in the New England States, and known as the Suffolk system. The parties to it were the banks of that section, which, without any legal enactment, agreed to make all their issues equal to gold at the commercial metropolis of those States—Boston; and to which, by necessary attraction, flowed all the currency issued that was not wanted for local purposes. With such a provision, there could not only be no excessive issues, but there was no motive to make them, as all such involved a direct loss of credit, and often of pecuniary loss. The result was that the unsecured notes of the New England banks, being always at par in one of the great monetary centers of the nation, were only at a very slight discount in every other portion of it. They were not at one-half of the discount in the city of New York, that the bills of the country banks of the latter State were, the ultimate redemption of which was fully secured by a deposit of bonds, but for the present redemption of which, at their par value in the city of New York, no provision was made. A similar system, extended to the whole country, with New York as the central point, would give the nation as good a currency as could be devised by the wisdom of man. Such a system would compel every bank, no matter where situated, to limit its issues to its capital. Such restriction is the sole condition of a perfect currency.

The laws of currency, which have been elucidated in the preceding pages, effectually dispose of the theories of Bullionists, who for every dollar of currency issued, would compel the banks to maintain in their vaults a corresponding amount coin. They overlook the vital fact that merchandise of all kinds is symbolized as a means of transferring or loaning the same, precisely as is gold, and that such currencies when issued against such merchandise, are just as valuable and as convertible as when issued against gold; and that as mediums of exchange, they perform all the functions of gold. There is the same sense in their theories, and no more, that there would be in a proposition to return to the primitive condition in which all exchanges were effected in kind.

(To be continued.)

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Business in stocks during the past week was very limited; many of the transfer books are closed, and little improvement may be expected till after the holidays.

Bank Stock.—Buyers offer 138 for Montreal, with sellers at 138½. British would command 105 but there is none in market. Sales of Ontario occurred at 99¾, 100 and 100½. No demand for Gore at 40. Buyers offer 97½ for Quebec; no sellers under par. Molson's could be placed at 110; very limited amount in market. There were sales of City at 102½, which rate continues to be asked. No sellers of Du Peuple; buyers at 107¼. Jacques Cartier is nominally worth 106½ to 107. Books of other banks closed.

Debentures.—The only Canada Government security on the market is Dominion Stock, which is procurable at 105. Toronto are saleable to pay 6¾ per cent. interest. Large sales of County occurred during the week at rates to pay barely 6½ per cent. interest.

Sundries.—City Gas is much sought after, but not a share has been offered in the market for weeks. The books of the Canada Permanent and Western Canada Building Societies are closed. Freehold sold at 104½ to 105, and a few shares may still be had at the latter rate. There are buyers of Montreal Telegraph at 135, and no sellers. Canada Landed Credit is offered in small amounts at 72. There are buyers of British America Assurance at 55, and sellers at 57. Mortgages are in demand to pay 8 per cent. interest. Money is readily obtainable at reasonable rates on good paper.

BANK OF ENGLAND.

The returns for the week ending the 2nd Dec., give the following results when compared with the previous week:—

Rest	£3,068,656
Decrease	25,897
Public Deposits	5,575,491
Increase	148,093
Other Deposits	18,085,578
Decrease	17,130

On the other side of the account:

Government Securities	£15,674,871
No change.	
Other Securities	17,193,379
Decrease	531,209
Notes unemployed	8,497,315
Decrease	509,785

The amount of notes in circulation is £23,510,112, being an increase of £266,857, and the stock of bullion in both departments is £15,057,148, showing a decrease of 169,189, when compared with the preceding return.

Bank of Commerce.—The Directors of the Canadian Bank of Commerce have resolved to apply to Parliament for power to increase the capital stock of their institution from one million to two millions of dollars.

Sale of Stocks in Halifax.—The following prices for Stocks were realized on the 10th, at W. M. Gray's sale of Stocks:—10 Shares Union Bank, $55; 10 do. $43; 7 do. 43.50; 10 do. $43.25; 13 do. $43; £200 Street Debenture, 5 per cent. £88 per £100; £500 do., £87 per £100; 100 shares Cape Canso Marine Railway, $2.50; 1 share Halifax Library, $6.00.

Sound and Sensible.—In the Annual Report of the United States Secretary of the Treasury, occurs this passage:—"What is now required, as has been already intimated, are measures which will tend not only to prevent further exportation of our bonds, and in the regular course of trade to bring back to the country those that have been exported, but which will also tend to restore those important interests that are now languishing, as the result of the war and adverse legislation. The first and most important of these measures are those which shall bring about, without unnecessary delay, the restoration of the specie standard. The fiscal difficulties under which the country is labouring may be traced directly to the issue and continuance in circulation of irredeemable promises as lawful money. The country will not be really and reliably prosperous until there is a return to specie payments. The question of a solvent, convertible currency underlies all other financial and economical questions. It is, in fact, a fundamental question; and until it is settled, and settled in accordance with the teachings of experience, all attempts at other financial and economical reforms will either fail absolutely or be but partially successful. A sound currency is the life-blood of a commercial nation. If this is debased the whole current of its commercial life must be disordered and irregular. The starting point in reformatory legislation must be here. Our debased currency must be retired or raised to the par of specie, or cease to be lawful money, before substantial progress can be made with other reforms."

The Arrest of Mr. Sayeton.—The New York *Sun* says:—Mr. George P. Sayeton, Cashier of the Commercial Bank of Newwick, was taken into custody on Tuesday evening by Dep. Sheriff Jas. Coupe, on the charge of being a defaulter to the amount of $1[illegible], having absconded, as alleged, on 14th of [illegible] with the above sum in his possession. The [illegible] was made under an order of the King's [illegible] Supreme Court, at the suit of A. McL. See[illegible], President of the bank, on the affidavits of [illegible] Prescott, cashier, Jas. McArthur and W. L. [illegible], tellers, and the President, Mr. Seely. Mr. P[illegible] swears that the accused while acting in the ca[illegible] of cashier, appropriated to his own use over [illegible] 650, for which he gave no account. Mr. McA[illegible] swears that on 14th Nov. he gave the accu[illegible] sum of $76,000 for deposit in the safe. No a[illegible] was made of the money, nor had it been depo[illegible] Mr. Magee swears that on 10th Nov. he g[illegible] a sum of $10,680 for deposit, but he subsequ[illegible] ascertained that the money had not been d[illegible] in the book kept by the prisoner, nor depo[illegible] the vault. The accused, who appears to be [illegible] 50 years of age, was committed in default o[illegible] He refused to see or converse with any on[illegible] appears to be considerably shaken by his [illegible].

Gone Down.—The "New England" F[illegible] Company, after a brief but honorable caree[illegible] a loss of $20,000, has gone down.

Insurance.

Fire Record.—Windsor, Dec. 12.—A fi[illegible] discovered in the store of Mr. Moore, on [illegible] wich street, and the store, with most of th[illegible] tents, and a residence adjoining, were dest[illegible] It was owned by Mr. Johnson, whose los[illegible] probably reach $3,000. Johnson was insur[illegible] $1,300, and Moore, whose loss would be [illegible] $2,500, had an insurance of $1,800. Cau[illegible] known.

Halifax, Dec. 10.—A house belonging [illegible] occupied by Henry Fredericks, on the [illegible] West Arm road. No particulars.

Goderich, Dec. 11.—Grassi's blacksmith [illegible] caught fire, and both the blacksmith and [illegible] shop were burned to the ground with co[illegible] Also Mr. Simond's dwelling house; fu[illegible] saved. No insurance. Mr. Grassi is insu[illegible] the Gore Mutual for $1,200, but this wi[illegible] cover the loss it is said. Cause unknown.

Shediac, N. B., Dec. 8.—The residen[illegible] Joseph C. Weldon was destroyed by fire. [illegible] about $1,600.

Sherbrooke, Dec. 15.—The dwelling ho[illegible] Mr. Bailey Clough, near Sawyerville, Eat[illegible] burned to the ground. Loss about $60[illegible] insurance.

The Owen Sound *Comet* reports that th[illegible] of Mr. Claudius Ekins, Saugeen river road, [illegible] ship of Derby, was burnt by fire. The in[illegible] Mr. Wm. Little, Miss Case, and Jane Drum[illegible] a grand-child of Mr. Ekins, perished in the [illegible] Mr. Ekins, his father, mother, wife, siste[illegible] rietta, brother George, Mr. Case, Wm. Bike[illegible] John Dowd, were so severely burned tha[illegible] recovery is doubtful.

Wellesley Township, Ont. Dec. 18.—A fi[illegible] place in Riner & Hickney's woolen f[illegible] Wellesley, on Friday morning last, but fortu[illegible] before it could make much headway, it was st[illegible] The loss will not be over $400 which wa[illegible] covered by insurance.

Halifax, Dec. —.—A house near the r[illegible] station was destroyed.

Cayuga, Dec. 15.—Saloon of Abel [illegible] caught fire, but was saved with a loss of [illegible] $75; no insurance.

Halifax, Dec. 7.—A severe storm fro[illegible] southeast swept over Halifax, causing [illegible] many disasters to the shipping in the harb[illegible]

down fences, blowing over chimney tops, part unroofing houses on shore. The ntinued through the night. No less than ive schooners were seriously injured; in es having their masts, jibbooms, bow- rails and bulwarks carried away, and the ore or less stove in. The steamer Delta into by a schooner and lost her fore-yard· storm appeared to pass over the whole a, it is feared that much damage was sus- y vessels along the whole coast.

Thorold fire company had their annual apper and ball on Wednesday last; 150 d gentlemen were present.

E MARIA.—The barque Maria, McKen- ter, from Quebec for Port Medoc, Wales, n lost on the Newfoundland coast, and the crew drowned. Six of the survivors nded at Halifax, N. S., on the 10th inst. ia was 225 tons register, and sailed from n the 5th of November, for Port Medoc, argo of square timber, deals, staves and d.

MONTAL.—Wm. Richardson, representing treal Assurance Company, Mr. Haldan, he Etna, and G. Rumball & Co., of the presented Captain Rowan, of the steamer ray, with a token of their appreciation nduct on the occasion of that vessel being shore off Chantry Island, by which the ters were saved from a heavy loss.

rs. Barclay, Curls & Co., of Greenock, launched the Lake Erie, a fine iron sail- of 950 tons register, intended for the merican trade. The vessel has been the Canada Shipping Company of this owners of the Lake Ontario. The com- e contracted, it is said, for seven other ne vessels.—[Montreal Gazette.

ER FRANCIS SMITH.—This vessel will d to remain in her present position in the pring. She is considered safe till that n it is said she can be got off without The loss is estimated at $8,000.

STRUCTIVE INCIDENT.—The following s an actual occurrence:—In one of our epresentative of an insurance company n a merchant in the vigor of a healthy apparently highly prosperous, who was ed. This gentleman listened to the s made with some interest, but finally he was compelled, just then, to use his nercantile operations, but should soon o take out a $10,000 policy. The agent that his very circumstances were an ar- r that immediate protection for his ich insurance alone could secure, and felt able to give no more than $5,000 or it might prove of great benefit to them. elt the force of the reasoning; and was get rid of the agent. The result was ation for a policy of $3,000. The two former to die within ten days from a ack of fever, the latter to forward the which gave his widow three thousand d it was all she had.

A MUTUAL INSURANCE COMPANY.—ing is the report of the committee ap- the Board of the Victoria Mutual In- mpany on the subject of establishing a insuring buildings on the line of the water pipes:

liance with a resolution of the Board, 7th inst., directing us to take such ac- might deem advisable towards the es- t of a branch in this city, to meet the s (by way of insurance) of those whose re protected by the line of water pipe, eport,

Act 22, Victoria Cap. 22, under which ny was incorporated, amply provides ration of its business into two branches nts, upon the following conditions;

1. That the Directors prepare a scale of risks for each department.

2. That they direct separate and distinct accounts to be kept.

3. That members shall only be liable for claims against the department in which they are insured, and not the one for the other.

4. That all necessary expenses incurred in the management and conducting of such departments, shall be assessed and divided between each in proportion to the amounts insured in each.

To afford complete security to policy holders for the payment of probable loss, it is the opinion of your committee that promises for insurance to the extent of $100,000 should be obtained before issuing a policy from the proposed branch.

That in lieu of cash, premium notes be accepted, a small per centage of which should be paid in cash to meet the expense of management. The balance subject to assessment for the payment of loss.

That on account of the extra security of this district, afforded by the hydrants, no risk accepted by the proposed branch should be reinsured in other companies; inasmuch as the money paid for premiums would probably exceed the whole amount assessable for loss in this district.

By following principally the foregoing principles the Victoria, in the short space of five years, has attained a substantial position amongst insurance companies, having issued during that time 7,153 policies, and now possessing in available assets for the payment of loss, a sum exceeding $100,000.

It is, therefore, the intention of your committee to ascertain the views of such as are interested in the proposed object, by calling upon them without delay. (Signed,) Geo. H. Mills, T. McIlwraith, A. T. Wood, P. Carroll.

Risks to the extent of $114,000 have since been obtained.

INSURANCE COMPANIES.

The following are the Insurance Companies which have received licenses to transact the business of Insurance in the Dominion, viz.:—

I.—*Canadian Companies.*

The British America Assurance Company, deposit $16,166 Cash—Fire and Inland Marine.

The Canada Life Assurance Co., $17,000 Cash—Life.

The Western Assurance Co., $17,000 Cash—Fire and Marine.

The Provincial Insurance Co., $16,666 Cash—Fire and Inland Marine.

The Agricultural Mutual Assurance Association, $12,000 Cash—Fire.

II.—*British Companies.*

The North British and Mercantile Insurance Co., $50,000 Cash; $100,258 Cash—Fire and Life.

The Liverpool and London and Globe Insurance Co., $50,000 Cash; $62,293 Canada 5's; $38,400 Canada 6's—Fire and Life.

The Royal Insurance Co., $96,982 Cash; $53,533 Canada 5's—Fire and Life.

The Reliance Mutual Life Assurance Society, $50,000 Cash—Life.

The Imperial Insurance Company $54,993 British 3 per cts.; $48,667 Canada 5's; $1400 Canada 6's.

The Northern Assurance Co., $37,196 Cash; $12,166 Canada 5's; $2,000 Canada 6's—Fire.

The Lancashire Insurance Co., $33,383 Cash; $18,666 Canada 5's.

The Phœnix Fire Insurance Co., $50,171 Cash; $50,126 Canada 5's—Fire.

The Commercial Union Assurance Co., $51,171 Cash; $50,613 Canada 5's—Fire.

The Life Association of Scotland $150,000 Cash—Fire and Life.

The Standard Life Assurance Co., $150,000 Cash—Life.

The Queen Insurance Co., $50,000 Cash; $51,100 Canada 5's—Fire and Life.

The Edinburgh Life Assurance Co., $150,515 Cash—Fire and Life.

The London Assurance Corporation, $150,000 British 3 per cts.—Life.

The Scottish Provincial Assurance Co., $50,171 Cash; $50,446—Fire and Life.

The London and Lancashire Insurance Co., $50,171 Cash—Life.

The Briton Medical and General Life Association, $100,343 —Life.

The Star Life Assurance Society, of England, $100,643.86 Cash—Life.

The Guardian Insurance Company, of England, $100,643.86 cash—Fire and Life.

III.—*American Companies.*

The Home Insurance Company of New Haven, Conn., $70,000 U.S. 5-20's—Fire.

The Ætna Insurance Company, of Hartford, Conn., $1,490 Cash; $48,510 Bank Stock—Fire.

The Hartford Insurance Company, of Hartford, Conn., $130,000 U.S. 5-20's—Fire.

The Phœnix Mutual Life Insurance Co., of Hartford, Conn., $70,000 U.S. 5-20's—Life.

The Connecticut Mutual Life Insurance Co., of Hartford, Conn., $140,000 U.S. 5-20's—Life.

The Travelers' Insurance Co., of Hartford, Conn., $140,000 U.S. 5-20's—Life and Accident.

The Ætna Life Insurance Co., of Hartford, Conn., $140,000 U.S. 5-20's—Life.

The New York Life Insurance Co., $75,000 U.S. 5-20's—Life.

The Atlantic Mutual Life Insurance Co., of Albany, N. Y., $50,000 U.S. 10-40's—Life.

The Equitable Life Insurance Co., of New York, $75,000 U.S. 5-20's—Life.

The Union Mutual Life Insurance Co., of Maine, 50,000 U.S. 6's of '81—Life.

MONTREAL FIRE BRIGADE.

We believe the Fire Department of no city in America is so economically managed as that of Montreal. Certainly none is more efficient; therefore, to speak commercially, we have the best article at the lowest price. This is no doubt due to the perfection of discipline in the department, and the admirable general working of the fire-alarm telegraph. Strong indeed must be the wind, inflamable the materials, and rearly absolute the want of water, if a fire should now be allowed to gain such head as to become serious. This being the case, let us see how we compensate the members of this efficient fire brigade of ours, as compared with the wages paid in, say, five of the principal cities of the Union,

The subjoined figures show the annual cost per head of the fire departments, respectively, of the following cities :—

	Cost.	Population.
Chicago.....	$276,720.....	250,000
Detroit.....	63,000.....	85,000
Louisville.....	82,000.....	140,000
St. Louis.....	137,000.....	250,000
Baltimore.....	66,000.....	250,000
Montreal (gold)	18,125.....	120,000

From this it will be seen that Chicago pays $1.10 per head; Baltimore, $0,27; Detroit, $0.74; Louisville, $0.60; St. Louis, $0.55; and Montreal only $0.15, equal to $0.23 U. S. funds. So that our most efficient fire department is maintained at a rate of only about one-fifth of the cost of the fire department of Chicago; and the difference of rate between that of Montreal and the fire departments of the four other cities of the Union which we have cited our readers can calculate for themselves; but in every instance, except Baltimore, it is very great indeed.

The difference, too, between the rate of pay of the members of the fire brigade of the American cities just enumerated, and those of the Montreal fire brigade, is also striking. Our fire brigade has 16 men at $300, or $408 in U. S. funds; 9 men at $400, or $544 U. S. funds; 9 men at $500, or $680 U. S. funds; whilst the American firemen receive $1,000 each, and the drivers and horsemen $924 each.—*Witness.*

THE CANADIAN MONETARY TIMES
AND
INSURANCE CHRONICLE.

THE publishers will have the pleasure of sending this week to each Canadian subscriber of THE MONETARY TIMES, the first number of the REAL ESTATE JOURNAL, which will be sent regularly in future every fortnight, the subscription price being included in the $2.00 charged for THE MONETARY TIMES. In these days of cheap newspapers the publishers find this step to be necessary in order to keep pace with the times. The business public may now get the two papers for the price of one—each of which is worth more than the subscription price to any business man.

BANKING.

THE CANADIAN MONETARY TIMES AND INSURANCE CHRONICLE is the only paper in the Province which makes banking a specialty.

INSURANCE.

It is the only insurance journal in Canada. Every one who desires to know the character and standing of the Insurance Companies doing business in Canada can only get the information in its columns.

MINING.

It is the only journal which keeps regular correspondents in the principal mining districts, and affords strictly reliable information respecting mining matters.

COMMERCE.

Everything of interest in trade and commerce is carefully noted in the markets of Toronto, Montreal and the Maratime Provinces, making it more valuable in this department than purely commercial journals.

STOCKS AND SHARES.

The market prices of stocks, shares and debentures of every class in which our people are interested, as quoted in the centres of trade, are always to be found in the Stock and Share list.

PUBLIC COMPANIES.

The proceedings of all public companies in the country are reported, including banks, insurance, railway, mining, and other companies, building societies, &c., thus affording the only complete record of the doings of public companies to be obtained in the Province.

These and other features make it invaluable to the Banker, Merchant, Insurance Agent, Miner, Capitalist, Manufacturer, and all business men.

SUBSCRIPTION PRICE—The MONETARY TIMES and REAL ESTATE JOURNAL, only $2.00 a year in advance.

Address, THE MONETARY TIMES,
Toronto, Ont.

☞ The Publishing Office of THE CANADIAN MONETARY TIMES AND INSURANCE CHRONICLE is removed to No. 60, Church Street, 4 doors north of Court Street.

The Canadian Monetary Times.

THURSDAY, DECEMBER 24, 1868.

MR. WILMOT, OF NEW BRUNSWICK, ON THE CURRENCY!

This gentleman has responded to a series of questions on the currency by a committee of the House of Commons, and has published his replies in the New Brunswick papers. They seem to have excited some considerable attention, partly from their bold and confident assertions, and partly from the semilogical air which seems to pervade them, in which, to say the truth, there are as many fallacies and foolish fancies covered up as it has ever been our lot to meet within the same limits.

These fallacies and fancies are all branches of one fundamentally false notion, namely, that it is not desirable, or necessary, to have any fixed standard of value. Mr. Wilmot does not believe that a dollar should mean the same thing to-morrow as it does to-day, and he would have a currency which would fluctuate, not only in amount, but in value, with the necessities of the government, and the circumstances of the times.

It is somewhat cool, we must confess, at this time of day, for a gentleman professing to have financial ability to denounce the monetary system of Canada because it rests on a gold basis, and deliberately to advocate an irredeemable currency. When universal experience tells us that gold and silver are the only solid basis of monetary operations; when writers on finance, almost without exception, however widely they may differ on other matters, agree in the same conclusion; when the trade between every nation under heaven, is, and always has been, conducted on the same principle; when countries which have been forced by pressure of circumstances to deviate from this standard have invariably suffered such intolerable evils as to be willing to endure the most painful sacrifices in order to reach the path of safety again, it is idle to talk of a fixed price for gold being a relic of barbarism.

The man who can ascribe panics to this cause rather than to extravagance and overtrading is not to be reasoned with. Throughout the whole of Mr. Wilmot's answers the notion crops up again and again, that the true remedy for financial evils is plenty of irredeemable paper money. He does not seem to have the slightest notion that a country, at this time of day, cannot isolate itself from the rest of the world, and, as respects other countries, may run into debt just as an individual may with other individuals. When a merchant runs into debt, all goes along smoothly enough so long as his creditors are willing to trust him. His expenditure may be over-running his profits by thousands a year, yet if he can only keep up his credit, and his correspondents continue to supply him with goods, he finds no difficulty in getting along. We have had plenty of examples of this kind of thing in every commercial community, and the end is invariably the same, namely, a break up of credit, a stoppage of supplies, an insisting on payments, law suits, bankruptcy, and poverty. The crash is a painful affair, and causes misery to the individual, to his creditors, his bankers, his family, and everybody that had any relations with him.

Now supposing this gentleman, in the midst of his bankruptcy, to reason in this manner:—What scandalous laws and customs these are which compel a man to pay his debts!—If I had never been pressed to *pay*, all would have been right.—Why could not my paper be kept afloat, as usual? Why could not things go on smoothly, as they did before It would have been far better for all parties. I was a good customer to the foreign merchant. I was a capital customer to the [illegible] bouring tradesmen. All of them I p[illegible] paper, and paper answered their purpo[illegible] well. What madness then it was to br[illegible] this crash. It is not I who am to bla[illegible] is my creditors, who are such fools as t[illegible] all our trading by insisting on my paper[illegible] turned into miserable dirty gold.

Stripped of specious phraseology, it [illegible] cisely thus that Mr. Wilmot reasons r[illegible] ing the panics which sweep periodicall[illegible] the commercial world. Everybody t[illegible] studied them is aware that they are [illegible] precede l by a period of extravagance [illegible] spending, recklessness and folly exac[illegible] responding to the overspending of a[illegible] vent trader, and that the panics are j[illegible] same thing to the country as stoppi[illegible] ment is to a merchant. It is the idl[illegible] sense to blame the gold basis as the c[illegible] the panic, just as it is idle nonsense[illegible] trader to blame his creditors for his st[illegible] The panic is the natural result of th[illegible] vagance, and its counterpart is to b[illegible] over and over again in private life. [illegible] speak of a trader, how often it is the c[illegible] a private individual spends more tha[illegible] come, gets into debt, his creditors pr[illegible] and he is sued; after a world of tro[illegible] anxiety he manages to get time, and [illegible] of severe economy comes round ag[illegible] awhile, and pays all he owes.

Now the trade of a country, ta[illegible] whole, with other countries, is preci[illegible] lagous to the dealings of an individ[illegible] individuals. When the balance of [illegible] against it, continuously, from exc[illegible] reign importations, it simply indicat[illegible] vagance, overspending, and getting i[illegible] The sure result is tightness of mo[illegible] as it is with any man who spends m[illegible] his income. People of that sort a[illegible] "hard up;" and a country may be "[illegible] and must be when extravagance [illegible] spending produce their natural frui[illegible]

Mr. Wilmot's remedy for this [illegible] things is to issue more paper, whi[illegible] cisely the same as for a spendthrift [illegible] more of his promissory notes to [illegible] creditors, if they are so simple [illegible] them. Common sense says the [illegible] medy would be to economise and wo[illegible] Let the country produce more and [illegible] —that would bring things roun[illegible] doubt. In private life this would [illegible] sally conceded, but in dealing wit[illegible] affairs people are apt to get mys[illegible] leave common sense altogether.

It cannot, however, be too often [illegible] that the laws of credit and finance [illegible] cable and irresistible. A nation c[illegible] escape their operation than a m[illegible] *Promises to pay, if never fulfill*[illegible]

no matter who is the promisor. Mr. would have the country flooded with paper containing promises which are meant to be fulfilled, and he is insane to suppose that such rubbish would extravagance and overspending from ng their natural results.

course does not say all this in ex- rms, but no one can read his answers y without perceiving that this is the t of them.

M DOC GOLD DISTRICT.

(From our own Correspondent).

BELLEVILLE, Dec. 21, 1868.

o the existence of gold in the rocks or hy particular district, the most advan- hode of separating the metal from the neral substances in which it is contained, hich it is combined, is the subject which greatest importance to the miner. I refore, in the absence of other matter, iew of the processes by which sanguine propose to enrich the fortunate holders d silver claims, and themselves. As the Stephens flux is that which has been to the world with the greatest flourish rs, I shall pass it first in review, giving count of the flux itself, and detailing ence of its working in this quarter.

count given by the proprietors of the of the flux is shortly as follows: A cer- nel Stephens, (who is represented as norant both of practical mining and of eal science, and therefore a most unlikely solve a problem which has taxed the f the ablest scientific men of many s,) while confined in a Southern prison war of secession, heard much conversa- g his fellow prisoners respecting the separating the gold from the sulphur- h it is so often contained. These con- excited a strong desire in his mind to profitable method of extracting the etal from its baser accompaniments. release, he happened to get possession quantity of this, to him, unknown ma- took it to Mr. Guild, an assayer in hom he requested to make an assay any gold-bearing ore he might have in his possession. Mr. Guild accordingly smelted with a portion of this flux a sample of ore which he knew to yield by "mint assay" $300 to the ton, and obtained therefrom no less a result than $1,400 per ton. Suspecting some error, as well he might, the assayer repeated the process, and again obtained the same result, $1,400 per ton.

The Colonel then had a furnace erected, in which he treated 2,500 pounds of ore, which had never yielded by other processes more than $22 per ton; but from which he extracted at a single melting, gold to the value of $539.58, or at the rate of $431 per ton. This is his own account; but there are not wanting those who say that the flux used on that occasion was heavily "salted."

The experience we have had of the flux and its vendors is as follows: Early in the present year, two gentlemen from Wisconsin, Messrs. Jones and Robbins, visited the district, and took from a mine in the township of Hungerford a quantity of pyritiferous ore, which they took to Boston, and had it assayed by Mr. Guild, who gave them a return of $40 per ton. On the faith of this they returned to Canada, purchased the mine, put up reduction works according to plans, etc., furnished them by the Stephens Company, who agreed to send one of the partners to instruct them in the whole process of reduction by their method. When the works were finished, one of the Boston gentlemen came accordingly, and under his directions they smelted about three tons of ore, from which, instead of the pure metal they expected, they got about a ton and a half of "matt," i. e., a combination of crude metallic matter which might or might not contain gold as one of its component parts, but in which it was quite as intangible as in its original matrix. On being requested to go on and complete the process, the Boston man refused to do so, telling them that it would be necessary for them to send the matt to Boston to be refined, offering to do it for ten cents on the dollar of gold value. This they refused to do; and so the matter stands between them and the Boston Company at present. Messrs. Jones and Robbins have since dispatched a portion of said matt and also of the crude ore to Swansea, Wales, to be reduced, so that its value may be tested in a satisfactory manner.

The readers of THE MONETARY TIMES will of course draw their own inferences from the above related facts. My own I must candidly say, are not very favorable to the flux as a medium for the economical reduction of gold ores, or to the straightforwardness of its "proprietors." Even if it were all they assert, it could not, at its present price, be applied to the working of poor ores, as the expense attending its use could not be less than $25 to $30 per ton.

The Richardson Company have had another lot of twenty-five tons of their ore reduced, the produce of which, though not yet melted down, is estimated by their manager at $150, or $6 per ton. Another lot, which was being operated upon at the time his message was sent off, promises, from the appearances of the amalgam which was forming, to give a better result than the foregoing.

The mine at Mallorytown still continues to give good assay results. The machinery is rapidly approaching completion. The building is ready for its reception, and the owners expect to be able to start work as soon as the spring sets in.

SILVER ON LAKE SUPERIOR.—Mr. Thomas Macfarlane has assayed the silver ores from the veins discovered by him at Mhunder Cape last summer, and we are authorized to state that the result of his assay is most satisfactory, showing a result of more than 1,900 ounces of silves to the ton of ore. The samples assayed were carefully taken under the supervision of Professor Dawson as exhibiting a fair average of the productive portion of the vein at Thunder Case. Similar samples have been sent for assay to an assayer in the United States, the details of which assay, as well as Mr. Macfarlane's, will shortly be published.

PEAT.—An American Company has been formed in the State of Connecticut for the extraction and manufacture of peat after the process patented in Canada and the United States by Mr. Aubin, of Montreal. The capital of the Company is $250,000, in which the patent right goes in for $125,000. Mr. A. Hibbard, of Montreal, is one of the directors, and Mr. Aubin consulting engineer of the Company. Three other companies under the same patents will, we understand, begin or continue operations in Lower Canada, one at Sorel, one at Valleyfield, and another at Belœil.

—On or about the 15th day of January next, S. P. Mansfield of Detroit, Alex. Dearborn, and G. B. Nichols of Boston, J. B. Hills of Newton, Mass., and J. W. W. Ward of Ottawa, will petition the Lieutenant Governor in Council to incorporate the "McNab Iron Company," whose purpose is the mining for iron and other metals, and the washing and smelting of ores in the township of McNab, county of Renfrew, with a nominal capital of $50,000; stock subscribed, $30,000; and the amount to be paid in before granting the charter, $10,000, to be invested in mineral lands held by trustees for the company.

Increase.....	$1,504 98

THE INTERCOLONIAL RAILWAY.—The Railway Commissioners have issued the following notice:—"The Commissioners appointed to construct the Intercolonial Railway, give public notice that they intend to let four sections of the line at once.

"Sections Nos. 1 and 2 embrace about 40 miles from a junction with the Grand Trunk Railway, near Riviere Du Loup, and each section will be about 20 miles in length.

"Section No. 3 will be about 26 miles in length, and lies between the east side of the Restigouch, River to near Dalhousie in New Brunswick.

"Section No. 4 will be about 24 miles in length and lies between Amherst and River Phillip in Nova Scotia.

"Plans and profiles, with specifications and terms of contract will be exhibited at the offices of the Commissioners in Ottawa, Riviere du Loup, Dalhousie, St. John and Halifax, on and after the 11th January, 1869, and sealed tenders addressed to the Commissioners of the Intercolonial Railway will be received at their office in Ottawa, up to 4 o'clock on the 8th February, 1869.

"Tenders will shortly be called for other section of the line as soon as the plans are sufficiently advanced."

The Commissioners are to assemble at St. John, N. B., on the 29th instant, where Mr. Fleming, Intercolonial Engineer, is to meet them. The Commissioners intend to make a local examination of the portions for which tenders will be asked on Monday.

About 80 miles are to be put under contract,

part of which is in each Province. It is divided into four sections, so that only four tenders can be accepted. Tenders will be addressed to the Commissioners here. The Commissioners will not decide, but will recommend to the Privy Council the tenders to be accepted.

The Commissioners have made the following appointments:—C. S. Ross, of Kingston, Secretary; J. B. Martel, of Quebec, Assistant Secretary; Wm. Wallace, of Simcoe, Accountant.

—It is reported that Mr. Rose and the Great Western Railway Company have come to an agreement for the liquidation of the debt due to the Canadian Government by the road.

PEAT MAKER.—*Le Pays* says that a peat-making machine, the invention of Mr. Aubin, was put into operation at Sorel and Valleyfield last summer, and worked so satisfactorily that some American capitalists are about to form companies to develop the new industry. One of these companies is about to be organized for the State of Connecticut, and will have a capital of $25,000, of which amount $10,000 will be paid for the patent. Mr. Ashley Hibbard has been elected one of the directors, and Mr. Aubin, consulting engineer of this company.

THE PLATTSBURGH AND WHITEHALL ROAD—MASSAWIPPI RAILWAY—MISSISQUOI CENTRE ROUTE.—We see by the Plattsburgh *Republican* that the grading for the Whitehall and Plattsburgh Railway is nearly completed from Fort Henry to Ticonderoga, and the rails about to be laid down. This new route along the Western bank of Lake Champlain will give Montreal still another direct line of communication to New York, and by 1869, there will therefore be no less than three in operation.

WOODEN RAILWAYS.—Mr. Hemming, M. P. P. for Drummond and Arthabaska, who has a Wooden Railway project on foot, for connecting the back towns of his own County with the Grand Trunk Railway, has been to New York State to see the Clifton Wooden Railroad, and in a letter describing his visit, says:—

"There was no appearance of the wheels cutting into the rails, even at the sharpest curves, neither did I find a single rail that had the appearance of being crushed. In fact the rails were so level and smooth that I walked the whole distance on the rail itself, at a pretty smart pace, and I have no pretension to being a "Blondin." We arrived at the train a little before sundown, which consisted of a ten ton locomotive, made expressly for the line—four trucks, carrying between five and six tons of iron ore each, and a car-load of lumber; the whole train weighing between forty and fifty tons. I should add that one of the trucks containing the ore was front of the engine. We now started in good earnest at a rate of about twenty miles an hour, and soon came to a part of the road which was nearly all supported on trestlework, there being no less than five viaducts, varying from 124 to 400 feet in length, and from 25 to 35 feet from the level of the ground, in a distance of half a mile. Imagine my surprise, when I found that the engine driver on arriving at this trestlework, so far from slackening his speed, actually increased it to thirty miles an hour!

The grading of course is the same as for an iron, except that stiffer grades can be ascended on the wooden road. The ties are of the ordinary description, but are not squared on any side, and on the Clifton road are placed at the usual distance of three feet apart, except on the trestles, where there are three ties to every two yards. In future, however, Mr. Hurlburt proposes to put the three ties to every two yards, as he proposes running heavier engines. The rails on the Clifton road are of maple, six inches by four; Mr. Hurlburt intends in future to alter their shape a little without increasing the quantity of timber, making them three and half inches on top, by seven inches deep, so as to be better adapted to the increased weight of engines, (fourteen tons instead of ten.) Notches are cut in the round ties to such a depth as to keep the bottom of the rail about two inches from the ground after the road is built, and the rail projects sufficiently above the notched tie to allow the flange of the wheel to pass. The rails are fastened to the ties by a couple of hardwood wedges, driven in opposite directions on the outside of the rail, within the notch. This has the effect of making the whole superstructure one solid mass without the addition of any spikes or pins. In making the curves the rail itself is bent to the required shape, so that there is no angularity whatever in the line of rails. The trestles are of the simplest description. They consist of two upright sticks of square timber immediately under the rails, let into a transverse stick, which are braced to the sticks of timber laid lengthwise from one trestle to another, immediately under the line of rails in each direction. This is further supported by a similar stick of timber at each side, from the head of the trestle to the base, in a slanting direction, the whole of which is let into a squared log at the base. The wooden rail is not, I believe a new invention, but Mr. Hulbert has succeeded in making it available without using a particle of iron in the whole structure, and has, moreover, demonstrated that such railways can be used for long distances at a moderate cost, and this through a country where an iron line, as ordinarily constructed, would be practically an engineering impossibility. Mr. Hulbert says that he is willing to contract to lay the superstructure of a wooden railway of his own improved construction at the rate of fifteen hundred dollars, American currency, a mile where maple and hemlock can be obtained at reasonable rates."

THE GOVERNMENT AND THE TELEGRAPH.

The discussion in England, both in and out of Parliament, in favor of the government controlling the telegraph by buying up all the existing lines in that country, has extended to the United States and the government at Washington is urged, in certain quarters, to place the telegraph system under the management of the Postmaster General by similar means. It seems to us about as reasonable for the government to undertake the purchase and management of all the railways as all the telegraph lines in the country. The one kind of enterprise being not dissimilar to the other. That a government steps out of its legitimate sphere when it embarks in any such business can not be denied, while there are grave objections to government interference with the telegraph apart from the mere question of principle. In a country governed by parties as this is, it will never do to have the government of the day controlling the means of telegraph communication, and the same argument applies to England, where it has been already advanced with convincing effect, and inasmuch as party spirit runs higher here than there the danger would be correspondingly greater. The telegraph would, it may be accepted as a certainty, be used as a political machine by the party in power, and this of itself is sufficient to condemn government interference with it. There is no knowing how far the rights of the press and the people might be trampled upon in this particular by unscrupulous partizans in office, and consequently they should never be invested with the power for mischief which privileges of this kind would give them.

The advocates of the proposed scheme will, before much progress is made towards the desired end, have to shew that the existing telegraph companies have failed to meet the wants of the people, and are, moreover, incapable of meeting them. Further, it will be also incumbent upon them to prove that the government will be better enabled to meet these requirements than the telegraph companies, and that there would be no drawbacks or inconveniences to the public to counterbalance any advantages arising from governmental administration. That the telegraph companies have a stronger incentive to improvement in everything connected with their business the government would have is obvious, but the enterprise they have shown in the past is a guarantee for the future. The English telegraph companies have been fully as active as those of the United States in their efforts to improve, extend and cheapen telegraphic communication. In insulation by means of gutta percha was adopted, and in 1857, and again in 1862, further improvements in insulation were effected. In 1855 Hughes' "type printers" were introduced, and in 1863, Gisela's "inductive telegraph, which in the same year", printing instruments" and "Wheatstone's automatic system," as also Hawthorn's plan of working without wind were tried. In this country, the Atlantic and Pacific, the Erie and other lines worked in opposition to the Western Union Co. are being rapidly extended, and in proportion as their business increases the charges for the transmission of messages are reduced. Competition is the life of trade, and the people should encourage it in the business of telegraphing as much as in anything else. What would, of course, be an end to this if the government monopolized the wires, and whether the government employees did their work the better or the reverse, there would be no reducing, as improvements travel slowly through official channels, while red tape, in this country as well as elsewhere, interposes a vexatious bar to progress.—*Albion.*

CONTRACT.—An exchange says that Messrs. Walter and Frank Shanley have contracted with the State of Massachusetts to build the Hoosac tunnel on the Troy and Boston Railway. The tunnel is to be four and a half miles long, and has been partially completed, but the company which has attempted it failed to carry it through. The Messrs. Shanley have taken the contract for $5,000,000.

NIAGARA SHIP CANAL.—The Niagara Ship Canal was brought up in the United States House of Representatives on Monday, and made the special order of the day for the 11th prox. by a vote of 109 to 49. Some members voted for the motion out of good-will to the mover, but the vote was so strong that the friends of the measure believe it can be carried through. The bill provides that the work shall be done as a military and commercial necessity by the Government, under the direction of the Secretary of War; that it shall be begun within one year after the passage of the act, and finished as speedily as possible, and that the control of it shall be retained by the United States. The engineer's estimate as to the cost of the work is about $12,000,000.

—The preliminary survey of the route for a wooden railway, from Sherbrooke, Q., to Portland, has been commenced by Robinson Oughtred.

ONTARIO LEGISLATION.

Prior to the adjournment of the Ontario Legislature the following bills passed a second reading:

No. 113, to grant certain powers to the Canada Farmers' Mutual Insurance Company.

No. 84, to incorporate the Ontario Trust and Investment Company.

No. 83, to incorporate the Prospect Park and Belmont Railway Company.

No. 108, to incorporate the Simcoe and Muskoka Railway Company.

No. 109, to incorporate the Norfolk Mutual Fire Company.

No. 103, to amend the Act to incorporate the Port Whitby and Port Perry Railway Company.

No. 72, to amend and confirm the charter of the Ottawa and Gloucester Road Company.

No. 95, to incorporate the Mutual Fire Insurance Company of Hamilton.

No. 120, to incorporate the Caledonia Manufacturing and Smelting Company.

The following passed its third reading

o. 112, to amend the Act passed in the 28th , respect ng the granting of charters of in- oration to manufacturing, mining and other panies.

mong the bills assented to by the Governor :—An Act for the incorporation of the Ontario ual Life Assurance Company. An Act to ex- the 36 sec. of Hamilton Debenture Act of , and to legalize the application of the rates d by the City of Hamilton under the By-law ed to in that section.

Law Report.

RE INSURANCE—FORFEITURE—WAIVER.—recent case of the Supreme Court of Iowa, ollowing judgment was given:

Where a policy for insurance provides that risk of fire to the building insured shall be ased by a change of occupation or other means in the control of the insured, without the en consent of the insurers, the policy "shall id"—this condition being inserted for the it of the insurers—they may dispense with liance therewith, or waive a forfeiture of the y incurred by a breach of the condition, and by preclude themselves from setting up the tion, or such breach thereof, as a defense to tion for a less subsequently occurring. And dispensation or waiver need not be in writing unded on any new consideration.

2. Any acts, declarations, or course of dealing e insurers, with notice of the facts consti- a breach of a condition in the policy, re- sing and treating the policy as still in force, ading the insured to regard himself as still ted thereby, will amount to a waiver, of a ture by reason of such breach, and prevent surers from setting up the same as a defense sued for a subsequent loss.

3. A local agent for a foreign insurance com- authorised to effect insurances, and entrust- th the blank policies of the company, with rity to fill up, countersign, and issue them, rates of premium, give consent of the com- to change of occupation and risk, assignment olicies, and other things which by the of the policy require such consent, and to policies in his discretion for increase of risk er causes is to be regarded as the general of the company, authorised to transact the ss of insurance for them at the place of his ; and has power, in the absence of a limi- of his authority, known to those with whom ls, to waive forfeitures of policies, by reason aches of conditions therein, and to dispense uch conditions, and the acts and declarations h agent, recognizing and treating a policy as and subsisting, with knowledge of facts con- ng a breach of its conditions, will be bind- the insurers.

4. A consent by the insurers to the occupation insured building for a certain manufactory, with it a consent to the keeping and use on emises of any article necessary to the manu- , or commodity used therein, although the g of such articles without the written con- the insurers is expressly prohibited in the And such consent to the occupation for anufacturer operates to waive or dispense uch prohibition in the policy.

5. Where the agent of the insurers, after a change occupation of the insured building, involv- increase of risk, consented to the continu- the policy, on condition that an iron door be put into the building, but without limit- specific time within which this should be he insured was entitled to a reasonable time in the door, and its being put in was not a on precedent to the continuance of the And if, after the exercise of reasonable e to get the door put in, but before it was in it in, the building was destroyed by fire, surers cannot resist payment of the loss on und of the door not having been put in.

JETTISON—LIABILITY OF INSURER.—If goods are thrown overboard in order to save a vessel from some danger, there arises a right on the part of the owner of these goods to claim general average from the owners of the ship, freight, and of the rest of the cargo—that is, the owner of the goods jettisoned having been deprived of his goods for the benefit of the owners of the rest of the cargo and of the ship, is entitled to claim from these latter compensation for the loss thus sustained. The owner of the jettisoned goods does not recover the whole of the value of his goods, as it is but right that he, as well as others, should contribute to make good the loss. All the owners of ship, freight and cargo, including the owners of the jettisoned goods, pay in proportion to the value they had at stake when the jettison took place.

In *Dickinson* v. *Jardine*, 16 W. R. 1169, goods had been properly jettisoned, and the ship and cargo had consequently come safe to port, and were therefore liable to a claim for general average. The jettisoned goods were insured, and their owner (the plaintiff), instead of first claiming payment of the general average to which he was undoubtedly entitled, and then claiming from the underwriters the amount of his actual less, claimed directly from the underwriters the whole value of the goods, and contended that it was for the underwriters, and not for him, to obtain payment of the general average. The underwriters refused to do this, and argued that although they were liable to pay the whole loss actually suffered, they were not bound to pay more, and that the plaintiff must obtain payment of the general average contribution for himself; and that the underwriters were only liable for the amount of loss that remained after deducting the amount so due to the plaintiff, as that was really the amount of his loss.

It was held by the Court of Common Pleas that the plaintiff was entitled to recover directly from the underwriters the whole value of the goods, and that it was for the underwriters to obtain payment of the general average.

There seems to have been no reported case in the English courts which decided this point, although there were several American authorities upon the question. Bovill, C. J., cites a passage from *Phillips on Insurance*, to the following effect: —"It is not a condition that the assured on goods must claim contribution by the other parties for a jettison before he can demand indemnity from his underwriters. He may demand it of them in the first instance." The Court decided in accordance with this passage, which now, therefore, correctly states the English law on the subject. We believe it has generally been the practice in London to consider the underwriters in such circumstances as those in *Dickinson* v. *Jardine* liable only for the actual loss caused by jettison after debiting the owner of the jettisoned goods with the amount due for the general average contribution. This is, however, quite opposed to the general principles of insurance law, and although it may be a convenient way of settling accounts between insurers and insured, it can have no legal force unless perhaps an unvarying custom to this effect could be proved. It is, however, of course competent to underwriters to insert in their policies an express stipulation limiting their liability in these cases, and there is no legal objection to such a course.

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, Dec. 15, 1868.

Our river is nearly frozen across, and all traffic has ceased except such as comes through the Victoria Bridge. We now see the importance of that vast, though expensive, structure. Our communication with the States and the south side of the river remain unbroken; usually at this period, till the ice bridge took, all connection with the opposite side ceased, or was carried on by canoes at very considerable risk to life and property. The same as with the Grand Trunk, we every year more and more appreciate the great advantages we derive from it; true we have paid rather dearly for our whistle, but now we could not do without it.

Our produce market remains very quiet, and flour has not materially changed from my last week's quotations. The sales are merely for local wants, nor do we now look for any export trade. The Grand Trunk Railroad brings us down our necessary supplies, and all shipped goes direct to Portland, so that we in Montreal have not the handling of it. Grain is nominal in price for all descriptions, and the same remark applies to provisions.

In my last week's letter to you I gave a short *resume* of the dry goods trade. Now I will give you a sketch of the grocery market for the fall season:

GROCERIES—The trade generally during the fall has been satisfactory. Some of our large jobbing firms have been operating beyond their means, and forcing goods off to all sorts of buyers in the West; others, not content with a good healthy business, have speculated in gold and other tempting things, and the consequence has been that some of our leading jobbers have gone down, but this by no means shows anything wrong in the general business. On the contrary, greater caution has been exercised than usual, and the losses have been lighter.

CHEMICALS have sold largely but at almost a nominal profit: this is owing to the large quantity, especially of soda ash, sent here on consignment, and therefore forced off at any price that will clear cost, thus leaving the importers a small chance of making a profit. Prices have ruled low.

COFFEE—Owing to the low prices which have ruled during the last few months, a considerable business has been done, but I doubt if sales have been satisfactory to importers.

FISH have sold freely during the fall, and prices have ruled high; the catch generally has been light and consequently our supplies have been light. The fish market here is very much regulated by the price of pork, and when that is high the price of salted fish always rules proportionately high. The exception has been in dry cod, of which there has been a good supply, and prices are rather easier. Of good mackerel there are none on the market, and the stock of fish generally is light.

FRUIT (imported)—The result to importers has been disastrous as regards raisins, but this has been the experience of the last two years. Our merchants have steadily over-imported. This year it was considered that the comparative failure of green fruit here would justify a larger import than usual, but such has not been the case, and importers have been the losers. In currants on the contrary an active business has been done at remunerative rates.

In NUTS, SARDINES, &c., the usual amount of business has been done at fair prices.

MOLASSES—The business in this article is mostly regulated by the price of butter. This fall the price of molasses has ruled very low, and that of butter very high, consequently a very large business has been done. The market closes low but active.

NAVAL STORES—A fair business has been done, prices having followed the fluctuations of the New York market.

OILS—In *Cod* and *Seal* the rapid increase of price early in the fall restricted the amount of business; at the end of the season the market closed easier, and there was more disposition to realize on the part of holders. Stocks are light. In *Linseed Oil* business has been light, chiefly owing to the decline in England, which has caused buyers here to operate only from hand to mouth. From what I can hear prices of linseed oil have touched the bottom in England, and consequently we may look for a safe trade here,

RICE—In this staple the ordinary amount of business has been done; stocks are light, but importers are timid, owing to the low price of wheat, which materially interferes with the price o. rice.

SALT—A large business has been done during the fall and speculation has been rife; prices have fluctuated considerably, but the tendency has been upward. The market closes with light stocks, not more than sufficient for our requirements before the spring importations.

SUGAR—In raw sugar a large business has been done, chiefly with the refiners, although several in the trade have sold largely to their country customers, of good grades. I may here remark that the lower qualities of refined sugars are rapidly superseding even the higher styles of imported. They are got up in more convenient packages, and not the same loss by drainage. I hear that the importers are satisfied with the result of the fall's operations; stocks are moderate and held for high rates. This is owing to the state of the New York market. Refiners have advanced their prices for all descriptions.

TEAS—The business has been large and satisfactory to all interested. Stocks generally were only moderate, and of good grades very light. Good Japans are rapidly getting into favor.

TOBACCO—In manufactured the business has been to the usual extent, and prices have been remunerative. The season closes with very light stocks. The "Prince of Wales" brand has become in such favor that the manufacturers have not been able to make it in sufficient quantity to meet the demand. I hear of some orders which they have had in hand for five to six weeks and not completed. *Leaf Tobacco* has ruled dull and prices low. The market closed without animation.

Toronto Market.

The general trade of the city is still quiet, and will remain so until after the holidays.

GROCERIES.—*Teas.*—Are quiet, and there is little doing except that some few lines have been placed with the city trade. The stock of teas in London on the 30th Nov. was 73,652,061 lbs., and in Liverpool 1,084,907 lbs. against 61,954,700 lbs., and 1,731,619 lbs. respectively. A telegram from Hong Kong, dated 2nd, gives the exports of tea from China up to that date at 112,400,000 lbs., being an increase of about 29½ millions of pounds on the exports to the same date last year. *Sugars.*—Our market is quiet; the New York market has fluctuated a good deal owing to the unsettled state of affairs in Cuba. *Fish.*—Quiet, and prices unchanged. *Fruit.*—There is a good demand for all kinds of fruit at steady prices. *Rice*—Unchanged.

HARDWARE.—Trade in heavy goods is a little better, and quotations are fully maintained.

PRODUCE.—*Wheat.*—Receipts for the week by cars 10,000 bush.; there is a fair demand for Spring wheat for milling purposes at $1.00 to $1.03, and all that offers at these prices is readily taken, but most holders ask more money. Some 8 or 10 cars sold at $1.01 to $1.03. Midge proof is also in good demand at the same quotations. Fall, prime white, is enquired for, and some few cars of choice have been placed for shipment at $1.19 to $1.20. Medium sold at $1.11 to $1.12, and there are few buyers above these figures. *Barley.*—Receipts by car 1,300 bush. There is little offered, and the demand is quiet at $1.25; sales of cars occurred at $1.22½ to $1.25. *Oats.*—Receipts 2,400 bush.; there is a good local demand at 52c. to 54c. and sales occurred at 54c. *Peas.*—Nominal, no receipts.

FLOUR.—Receipts for the week 2,677 brls. No. 1 superfine is offered at $4.60, and there are buyers of choice brands at that price, while ordinary is nominal at $4.50 to $4.55. Extra is held at $5.50, with buyers at $5.25 to $5.30.

PROVISIONS.—*Dressed Hogs.* The market has closed brisk at higher prices; receipts light.—*Pork.*—Mess is in good demand both for Canadian and old American. Provisions nominal.

FREIGHTS.—The following are the present rates via Great Western Railway from Toronto to Liverpool, London and Glasgow, per Williams & Gowan's line of steamers: Beef, bacon, pork, hams, lard and tallow, in lots not less than one car load and upwards, $1.03 gold per 100 lbs.; grain in bags, in lots of five car loads and upwards, 3s 4d sterling per 100 lbs.; flour, 6s 9d per bbl.. To Liverpool via National line: Beef, bacon and pork, $1 per 100 lbs.; lard, in barrels and tierces, $1.06 per 100 lbs.; in kegs and tinnets, $1.17 per 100 lbs.; butter and cheese, $1.43 per 100 lbs. Through bills of lading granted.

The winter rates of the Grand Trunk Railroad to the Maritime Provinces came into force on the 1st inst., and are as follows: From Toronto to St. John, N. B., general merchandise, per 100 lbs., first class, 90c; second class, 65c; third class, 55c; flour, per bbl., 95c; grain, per 100 lbs., 48c. From Stratford, London, or St. Mary's—flour, $1.10; grain, 55c. From Brantford—flour, $1.10; grain, 58c. From Guelph—flour, $1.05; grain, 53c. From Oshawa, Newcastle and Bowmanville—flour, 89c; grain, 45c. From Montreal—flour, 62c; grain, 30c. From Toronto to Halifax, N. S.—general merchandise, per 100 lbs., first class, 90c; second class, 65c; third class, 55c; flour, per bbl., $1.05; grain, per 100 lbs., 53c. From Guelph—flour, $1.15; grain, 58c. From Brantford, London and St. Mary's—flour, $1.20; grain, 60c. From Oshawa, Newcastle and Bowmanville—flour, 99c; grain, 50c. From Montreal—70c for flour, and 35c for grain.

The Cotton Trade.

The Liverpool cotton statement of to-day, as received by cable, shows the following condition of supply compared with the two previous statements:

	Dec. 18.	Dec. 11.	Dec. 5.
Total stock of cotton, bales...	354,000	365,000	367,000
Total stock of American.....	51,000	49,000	44,200
Total afloat	255,000	238,000	254,000
American afloat	110,000	95,000	78,000
Total of all kinds stock and afloat.....	609,000	603,000	621,380

We have here a slightly improving condition of supply, especially in view of the late large shipments to the Continent from this country, the total Continental shipments since September to date reaching about 175,000 bales, against about 85,000 bales last year. The Bombay movement indicates that the shipments since October 1 to January 1 will show an increase this season of about 40,000 bales over the total for the same period last season. With regard to consumption, the probabilities are not clearly marked. Our own manufacturers certainly show no disposition to reduce their time. The stock of goods are very light, while prices have advanced considerably during the month, and the indications of a healthy, active trade for the spring are becoming extremely promising. The European consumption, however, is more uncertain. Private cable advices to-day claim that the mills will soon be, and are in fact now being put on half time. We should place more confidence in these rumors if something to the same effect had not been sent to this side before during the month. Besides, the foreign goods movement of Great Britain has been in no amount very favorable. The Board of Trade returns for October, just issued, and given in our London correspondent's letter, published to-day, show a continued increase in the exports of cotton goods. Still there is a point at which the high price of cotton will check the European consumption. Liverpool circulars received this week all claim it is now reached, and strongly advise the immediate, further and decided reduction of time at the mills. It is to be hoped that the raw material will not reach such a price as to make this resort necessary. It is the key to the position, and, if adopted for even a few weeks, could not fail to affect our market very unfavorably. But, on the other hand, with a living price for the raw material to the manufacturer, it is pretty clear that the total world's supply of cotton this year will be needed.—*Financial Chronicle.*

Halifax Market.

BREADSTUFFS.—Dec. 15, 1868.—We have change to note in flour market. Receipts t week 5,254 bbls. Canada No. 1 ranges from $6 to $6.40; strong bakers $6.65 to $6.70; e Canada $7.50 to $8; extra State still contin dull at $6 to $6.40, according to quality. N in good demand at $5 to $5.50. Cornmeal—I dried scarce at $4.75; fresh ground, sound, n unsound $4.15 to $4.25. Rye flour $5.25 to 5 Oatmeal $8. Imports from December 8 to 1. 1867 and 1868:

	Brls. Flour.	Brls. Corn
1868.	181,890	48,294
1867.	186,507	35,125

WEST INDIA PRODUCE.—Molasses in s stock though no quotable advance in p Sugars dull except Vacuum Pan, which conti to be in good demand at 9¼c duty paid, wit stock in first hands. We quote: Porto Ri to 6¾c., Barbadoes 5¾ to 5¼c., Cuba 5¼ to Centrifugal Cuba 6c., in bond. Rum very s at quotations; 75c for Demerara and 65c f Jago.—*R. C. Hamilton & Co.'s Circular.*

Petroleum.

The following were the exports of Petro from the United States, from January 1st to 2nd:—

And from other places in nearly like pro

British Wheat Trade.

The wheat trade during the week has be aeterized by much inactivity, and there probability that a series of dull markets w until at least the turn of the year. An a crop, and importations which are very la sidering the heavy fall which has taken prices during the last few months, will to inducee the miller to purchase only fro to-mouth. As our importations are la

ed have been expected, any hope of a permanent improvement must, for the present, be dismissed. Winter wheats are already in the blade, but a few weeks of frost would perhaps be desirable in order to prevent them from becoming, in agricultural parlance, "too proud."

The following return shows the imports into the United Kingdom in November, and during the seven months ending November 30:

Imports in November.

	1866.	1867.	1868.
Wheat, ...cwt.	1,995,106	3,903,760	2,888,544
Barley..	1,009,613	536,300	875,555
Oats	545,280	875,279	560,396
Beans	312,599	160,602	238,885
Indian corn ...	786,876	282,194	956,547
Flour	402,897	389,426	273,116

Imports in Eleven Months.

Wheat.....cwt.	20,547,038	30,877,923	30,303,752
Barley.....	7,053,423	5,315,127	6,397,883
Oats.....	8,017,291	8,678,021	7,602,915
Peas.....	1,008,957	1,281,946	874,802
Beans.....	1,017,534	1,856,585	2,446,981
Indian corn...13,936,499		8,087,252	10,528,478
Flour.....	4,403,133	3,040,350	2,698,725

The returns for the ten months show that during the period the imports were somewhat in excess of the corresponding period in 1867, but not to an important extent. The receipts from Russia show a reduction of 3,250,000 cwt.; from Prussia of 1,480,000 cwt.; from Chili, of 530,000 cwt.; but, on the other hand, they have increased from the United States to the extent of 2,730,000 cwt.; from Egypt 2,150,000 cwt.; and from the Danubian Principalities to the extent of 1,693,250 cwt. As regards flour, the October importation shows an increase of about 110,000 cwt.; but in the ten months there is a diminution of 165,000 cwt.

THE CONNECTICUT MUTUAL
LIFE INSURANCE COMPANY,
HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, Secretary,
EDWIN W. BRYANT, Actuary,
LUCIAN S. WILCOX, Medical Examiner.

GUY. R. PHELPS, President,
ZEPHANIAH PRESTON, Vice President.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS.

Assets, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

Surplus Assets, $6,251,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

Its Dividends Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

Its Success Unparalleled—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

Its Responsibility—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867.....$45,647,191 09 | Income received fiscal year, 1867.....$7,530,836 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

Its Liberality—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

PROSPECTUS.

HE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Comies, chapter 67, of the consolidated Statutes of Canada. bject is to cover the Dominion of Canada with a comte net-work of Telegraph lines.

The Capital Stock

$500,000, divided into 10,000 shares of $50 each, 5 per t to be paid at the time of subscribing, the balance to paid by instalments, not exceeding 10 per cent per nth—said instalments to be called in by the Directors as works progress. The liability of a subscriber is limited the amount of his subscription.

The Business Affairs of the Compay.

s under the management of a Board of Directors, an lly elected by the Shareholders, in conformity with the arter and By-Laws of the Company.

he Directors are of opinion that it would be to the erest of the Stockholders generally to obtain subscripns from all quarters of Canada, and with this view they pose to divide the Stock amongst the different towns cities throughout the Dominion, in allotments suited the population and business occupations of the different dities, and the interest which they may be supposed to e in such an enterprise.

Contracts of Connections.

contract, granting permanent connection and extraordary advantages, has already been executed between this mpany and the Atlantic and Pacific Company, of New k; thus, at the very commencement, as the Lines of this mpany are constructed from the Suspension Bridge, at ton (the point of connection) to any point in the Doion, all the chief cities and places in the States, touchby the Lines of the Atlantic and Pacific Telegraph mpany, are brought in immediate connection therewith.

permanent connection has also been secured with the at Western Telegraph Company, of Chicago, whereby Company will be brought into close connection with the Lake Ports and other places through the North stern States, and through to California.

ANNUAL INCOME, £220,000 STG.:
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, as cash on the Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *It allows the Policy-holder to be payable during the life of the Assured, thus combining a Policy of Assurance with a means of support in old age, as well as a protection for the family*, and a more valuable security to creditors in the event of early death; and effectually meeting the only real objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

PROSPECTUS

OF THE

DOMINION EXPRESS COMPANY OF CANADA

ORGANIZED UNDER THE JOINT STOCK COMPANIES' ACTS.

CAPITAL STOCK, ... $1,000,000,

In 10,000 Shares, $100 each.

It is proposed to organize a DOMINION EXPRESS COMPANY, to meet the present and prospective demand for increased facilities of general transportation. It is the interest of Canadians to do their own work, and *accumulate* cash capital, and *one* of the objects of this scheme is the retention in this country of the profits arising from the business done.

Express Companies obtain "four-fifths" of their business from merchants and bankers, and no reason exists why they cannot transport their own goods, by their *own Agents, economically* and *efficiently*, and by a *union of capital* and *effort*, they hereby resolve so to do. Being thus united, and pledging to it their business and influence, secures to this Company certain and complete success.

This organization, like the mail system, is to extend, under *one general management*, to all cities, towns and villages in the Dominion, and to connect with all parts of the United States, and being but "one Company," will secure *unity, despatch* and *accuracy*.

It is proposed to distribute the stock widely, throughout the Dominion, in limited sums, apportioned as nearly as practicable to the business of the subscribers. The capital Stock of the Company to be not less than $1,000,000, in 10,000 shares of $100 each.

Ten per cent. of the stock subscribed will be required to be paid after the subscription shall have reached the sum of $250,000, and after a Charter shall have been obtained, of which due notice will be given to the subscribers; the subsequent calls, not exceeding *ten per cent. at any one time*, to be made at convenient intervals, as the demands on the Company may require. But the aggregate of all calls to be made will, it is believed, not exceed *forty per cent.* of the Capital Stock.

The business to be done strictly on *cash principles*. With a paying business assured from the start, by *interested* and *reliable* Stockholders, it will be seen that a small per centage *only* of the subscriptions will be required to put the Company in working order, and it is confidently and reasonably expected that the receipts will thereafter maintain and extend it. And in order to secure an equitable voice in its management, the principal commercial centres will be represented at the Board, by Directors recommended by Stockholders of their own localities, who will also recommend to the Direction the local Agents, and thus secure a general influence in its management, as well as its business.

All Express enterprises, both in this country and the United States, have been decidedly successful, resulting from the profits of the business itself; having an organization and a share list—such as are now proposed—with energy and economy in the direction, no doubt can be entertained of the most satisfactory results.

With such prospects, the Merchants of the Dominion, Capitalists and others interested in the success of this enterprise, are invited to become Stockholders.

The following shall be included in the By-Laws to be hereafter framed for the Government of the Company:

1. The Company shall be known by the name or title of "THE DOMINION EXPRESS COMPANY OF CANADA."
2. The Capital Stock of the Company shall be *One Million of Dollars*, divided into *Ten Thousand Shares of One Hundred Dollars each.*
3. Each Shareholder shall be liable only for the amount of Stock subscribed by him, her, or them.
4. The Shares of Stock of the Company shall be transferable; but no transfer shall be valid without the consent of the Directors, in writing, unless shares shall be paid up in full.
5. It shall be lawful for the Stockholders, so soon as the sum of two hundred and fifty thousand dollars shall have been subscribed, to call a General Meeting of the subscribers, to be held at the office of the Company, in the City of Montreal, and proceed to elect nine qualified persons to be Directors of the Company, each of whom to be a proprietor of not less than ten Shares of Stock of the said Company, and three of whom shall form a quorum, and all the powers of the Directors. The said Directors shall also, at their first General Meeting, elect a President, Secretary, Treasurer, and General Superintendent or Managing Director, from amongst themselves.
6. The said Directors so elected shall proceed, without delay, to frame all necessary By-laws to govern the Company, and shall have power to alter and amend the same as circumstances may require.
7. The Directors shall not have power either to *sell out* the said Company to any other Express Company or organization now in existence, or hereafter to be incorporated, or to amalgamate with any other Express Company.
8. No Stockholder shall be at liberty to hold in his, her, or their name, more than one hundred shares of the Capital Stock of the said Company, without the consent of the Directors, in writing, first having been obtained.

PRINCIPLES OF BANKING.

(Continued.)

The function of Government in the creation of a symbolic currency is almost equally restricted. The test of value of such a currency is that of the loanable capital it represents. Now the only parties capable of deciding whether paper currencies represent an adequate amount of capital, are those parties who are to receive them. It would be very ridiculous for Government to attempt, by legislative enactment, to secure the more certain payment of bills of exchange drawn in commerce between nations. None are so able to secure such provision as the parties to them. If currencies were the representative of gold and silver only, and not (as is the fact) of all kinds of loanable property, then the functions of Government would be plain. All it would have to do would be to restrict the issue of banks to the coin in their vaults. But who shall decide whether it is proper for a bank to make a loan by an issue of its notes and credits to a party offering it a bill given for a thousand barrels of flour? Of course, those only who, from their intimate connection with the trade, commerce and industry of the country, are in a position to determine whether the purchaser of the flour will be probably able to sell the same and collect the proceeds before the maturity of his note. Government can have no such intelligence or functions as these—in fact, it does not attempt to assume any control over the greater portion of the symbolic currency in use—the credits which banks write on their books. Only a very small proportion of the transfers of property are effected by bank notes. Outside of these, the amount of currency that may be issued is left, as it should be, to the discretion of banks. The operation of natural laws will secure the conditions necessary to a perfect currency far more effectually and completely than they can possibly be secured by any act or oversight of Government.

If Government assumes to interfere with the currency, its most important function would be the restriction of loans to bills receivable soon to mature, and given for loanable property. With such provision, rigidly enforced, there never could be an inflation, But unfortunately, the action of Government is always sought in a contrary direction—to authorize an expansion, which sooner or latter must be followed by a corresponding revulsion; but often not before society is so exhausted that years are required to repair the losses sustained, The Bank of England, for example, is authorized to issue notes to the amount of $75,000,000 upon the strength of having the possession of a corresponding amount of Government debt, redeemable only at the pleasure of the latter. This vast sum, although not the representative of loanable capital, exerts, from the circulation obtained for the notes issued, precisely the effect, for the time being, of so much capital. An extraordinary stimulus is given to every kind of investment and expenditure, without the addition of a penny to the means of consumption, It gradually comes to be seen that the inflation has led to the construction of too many ships and railroads; to the manufacture of too much iron and cloth; that too much money had been invested in schemes which never should, and never would, have been entertained, but for the disproportion created between the instruments and means of expenditure. As soon as people get their eyes open, each one endeavors to protect himself by converting his means into money, The bank puts up its rate of interest and calls in its loans, which only serve to increase the alarm and the drain upon it for gold, and the interposition of Government has to be invoked to allow the bank to transcend its chartered powers, by making loans irrespective of the amount of means it may possess, But all this does not prevent a crisis, which drives no small proportion of the community into liquidation. With the consequent prostration of business, money becomes a drug; the rate of interest is reduced to a minimum, to stimulate its use, when the past experience of inflation and contraction is repeated with all its attendant evils, but unfortunately, without teaching any useful lesson.

Now, if the $75,000,000 issued on Government securities, had represented loanable capital, either in its vaults or in the hands of its borrowers, there could have been no currency inflation, consequently no excessive contraction. The enterprises which this sum had set in motion would have rested on a solid basis—would have measured the ability of the people to consume, and would have exerted none other than a beneficent influence in the channels of business and trade.

The amount of reserves of loanable capital necessary to be kept on hand by banks to meet the calls to which they are constantly liable is a matter of experience, rather than of theoretical calculation. It will depend very much upon the character of the loans made. As the balance of indebtedness between the banks and the public is always in favor of the former to the extent of their capital, it follows that if their loans are made to solvent parties, they can always place themselves in funds from the payment of their bills. The reserves in such case will have to be only nominal. But as improper loans will always be made, involving corresponding disturbances in industries and commerce, reserves must be maintained to considerable amounts to meet such contingencies.

As the foreign commerce of a people is quite as much to be considered in making loans, as their domestic trade, reserves should be chiefly maintained in the great *entrepôts* of such commerce. The rule of the New York banks, before the suspension of specie payments, was to maintain reserves in coin equal to twenty-five per cent. of their immediate liabilities. The coin held by the country banks was much less, their reserves being made up chiefly of balances against the city banks. The great majority of the country banks held an amount of coin only necessary for ordinary payments by way of change. Banks are not necessarily strong in proportion to the amount of coin they may hold, but in ratio to the amount of promises of solvent parties to pay gold on demand. But as before remarked, the amount of reserves must be a matter of experience with banks, as with merchants. When there is no Government interference, and when perfect freedom of action is accorded, reserves will always be in a proper ratio to the demands likely to be made. People have only to be left alone, to adopt the best means to given ends, whether such be the construction of a steamboat, a railroad, or any other contriv-

ance, the object of which is to facilitate the exchange of property, or promote their own welfare. Symbolic currencies will be good just in ratio as they express the business transactions of a people. There is great probability that they will be bad just in ratio to the degree of governmental interference with them. Like all commercial contrivances—such as bills of exchange, steamships, and railways—their creation should be left entirely to the parties who are to use them.

The most perfect system of currency yet devised is that which so long prevailed in the New England States, and known as the Suffolk system. The parties to it were the banks of that section, which, without any legal enactment, agreed to make all their issues equal to gold at the commercial metropolis of those States—Boston; and to which, by necessary attraction, flowed all the currency issued that was not wanted for local purposes. With such a provision, there could not only be no excessive issues, but there was no motive to make them, as all such involved a direct loss of credit, and often of pecuniary loss. The result was that the unsecured notes of the New England banks, being always at par in one of the great monetary centers of the nation, were only at a very slight discount in every other portion of it. They were not at one-half of the discount in the city of New York, that the bills of the country banks of the latter State were, the ultimate redemption of which was fully secured by a deposit of bonds, but for the present redemption of which, at their par value in the city of New York, no provision was made. A similar system, extended to the whole country, with New York as the central point, would give the nation as good a currency as could be devised by the wisdom of man. Such a system would compel every bank, no matter where situated, to limit its issues to its capital. Such restriction is the sole condition of a perfect currency.

The laws of currency, which have been elucidated in the preceding pages, effectually dispose of the theories of Bullionists, who for every dollar of currency issued, would compel the banks to maintain in their vaults a corresponding amount coin. They overlook the vital fact that merchandise of all kinds is symbolized as a means of transferring or loaning the same, precisely as is gold, and that such currencies when issued against such merchandise, are just as valuable and as convertible as when issued against gold; and that as mediums of exchange, they perform all the functions of gold. There is the same sense in their theories, and no more, that there would be in a proposition to return to the primitive condition in which all exchanges were effected in kind.

(To be continued.)

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Business in stocks during the past week was very limited; many of the transfer books are closed, and little improvement may be expected till after the holidays.

Bank Stock.—Buyers offer 138 for Montreal, with sellers at 138½. British would command 105 but there is none in market. Sales of Ontario occurred at 99¾, 100 and 100½. No demand for Gore at 40. Buyers offer 97½ for Quebec; no sellers under par. Molson's could be placed at 110; very limited amount in market. There were sales of City at 102½, which rate continues to be asked. No sellers of Du Peuple; buyers at 107½. Jacques Cartier is nominally worth 106½ to 107. Books of other banks closed.

Debentures.—The only Canada Government security on the market is Dominion Stock, which is procurable at 105. Toronto are saleable to pay 6¾ per cent. interest. Large sales of County occurred during the week at rates to pay barely 6½ per cent. interest.

Sundries. City Gas is much sought after, but not a share has been offered in the market for weeks. The books of the Canada Permanent and Western Canada Building Societies are closed. Freehold sold at 104½ to 105, and a few shares may still be had at the latter rate. There are buyers of Montreal Telegraph at 135, and no sellers. Canada Landed Credit is offered in small amounts at 72. There are buyers of British America Assurance at 55, and sellers at 57. Mortgages are in demand to pay 8 per cent. interest. Money is readily obtainable at reasonable rates on good paper.

BANK OF ENGLAND.

The returns for the week ending the 2nd Dec., give the following results when compared with the previous week:—

Rest	£3,068,636
Decrease	25,897
Public Deposits	5,575,694
Increase	148,098
Other Deposits	18,085,878
Decrease	17,130

On the other side of the account:—

Government Securities	£15,074,874
No change.	
Other Securities	17,193,379
Increase	531,209
Notes unemployed	8,497,315
Decrease	396,785

The amount of notes in circulation is £23,510,112, being an increase of £266,857, and the stock of bullion in both departments is £18,087,448, showing a decrease of 169,189, when compared with the preceding return.

Bank of Commerce.—The Directors of the Canadian Bank of Commerce have resolved to apply to Parliament for power to increase the capital stock of their institution from one million to two millions of dollars.

Sale of Stocks in Halifax.—The following prices for Stocks were realized on the 10th, at W. M. Gray's sale of Stocks: 10 Shares Union Bank, $55; 10 do. $43; 7 do. 43.50; 15 do. $43.25; 13 do. $43; £200 Street Debenture, 5 per cent. £88 per £100; £500 do., £87 per £100; 100 shares Cape Canso Marine Railway, $2.50; 1 share Halifax Library, $6.00.

Sound and Sensible.—In the Annual Report of the United States Secretary of the Treasury, occurs this passage:—"What is now required, as has been already intimated, are measures which will tend not only to prevent further exportation of our bonds, and in the regular course of trade to bring back to the country those that have been exported, but which will also tend to restore those important interests that are now languishing, as the result of the war and adverse legislation. The first and most important of these measures are those which shall bring about, without unnecessary delay, the restoration of the specie standard. The fiscal difficulties under which the country is labouring may be traced directly to the issue and continuance in circulation of irredeemable promises as lawful money. The country will not be really and reliably prosperous until there is a return to specie payments. The question of a solvent, convertible currency underlies all other financial and economical questions. It is, in fact, a fundamental question; and until it is settled, and settled in accordance with the teachings of experience, all attempts at other financial and economical reforms will either fail absolutely or be but partially successful. A sound currency is the life-blood of a commercial nation. If this is debased the whole current of its commercial life must be disordered and irregular. The starting point in reformatory legislation must be here. Our debased currency must be retired or raised to the par of specie, or cease to be lawful money, before substantial progress can be made with other reforms."

The Arrest of Mr. Sancton.—The New York *Sun* says:—Mr. George P. Sancton, late Cashier of the Commercial Bank of New Brunswick, was taken into custody on Tuesday evening by Dep. Sheriff Jas. Campbell, on the charge of being a defaulter to the amount of $100,000, having absconded, as alleged, on 14th of Nov. with the above sum in his possession. The arrest was made under an order of the King's Comm. Supreme Court, at the suit of A. McL. Seely, the President of the bank, on the affidavits of George Prescott, cashier, Jas. McArthur and W. L. Magee tellers, and the President, Mr. Seely. Mr. Prescott swears that the accused while acting in the capacity of cashier, appropriated to his own use over $100,000, for which he gave no account. Mr. McArthur swears that on 14th Nov. he gave the accused the sum of $76,000 for deposit in the safe. No account was made of the money, nor had it been deposited. Mr. Magee swears that on 10th Nov. he gave the accused $10,080 for deposit, but he subsequently ascertained that the money had not been entered in the book kept by the prisoner, nor deposited in the vault. The accused, who appears to be about 50 years of age, was committed in default of bail. He refused to see or converse with any one, and appears to be considerably shaken by his arrest.

Gone Down.—The "New England" Express Company, after a brief but honorable career, and a loss of $20,000, has gone down.

Insurance.

Fire Record.—Windsor, Dec. 12.—A fire was discovered in the store of Mr. Moore, on Sandwich street, and the store, with most of the contents, and a residence adjoining, were destroyed. It was owned by Mr. Johnson, whose loss will probably reach $3,000. Johnson was insured for $1,300, and Moore, whose loss would be about $2,500, had an insurance of $1,800. Cause unknown.

Halifax, Dec. 10.—A house belonging to a man occupied by Henry Fredericks, on the North West Arm road. No particulars.

Goderich, Dec. 11.—Grassi's blacksmith shop caught fire, and both the blacksmith and wagon shop were burned to the ground with contents. Also Mr. Simond's dwelling house; furniture saved. No insurance. Mr. Grassi is insured in the Gore Mutual for $1,200, but this will not cover the loss it is said. Cause unknown.

Shediac, N. B., Dec. 8.—The residence of Joseph C. Weldon was destroyed by fire. Loss about $1,600.

Sherbrooke, Dec. 15.—The dwelling house of Mr. Bailey Clough, near Sawyerville, Eaton, was burned to the ground. Loss about $600. No insurance.

The Owen Sound *Comet* reports that the house of Mr. Claudius Ekins, Saugeen river road, township of Derby, was burnt by fire. The inmates, Mr. Wm. Little, Miss Case, and Jane Drummond, a grand-child of Mr. Ekins, perished in the flames. Mr. Ekins, his father, mother, wife, sister Henrietta, brother George, Mr. Case, Wm. Bikell, and John Dowd, were so severely burned that their recovery is doubtful.

Wellesley Township, Ont. Dec. 18.—A fire took place in Riner & Hickney's woolen factory, Wellesley, on Friday morning last, but fortunately before it could make much headway, it was stopped. The loss will not be over $400 which was fully covered by insurance.

Halifax, Dec. —.—A house near the railway station was destroyed.

Cayuga, Dec. 15.—Saloon of Abel Y. caught fire, but was saved with a loss of about $75; no insurance.

Halifax, Dec. 7.—A severe storm from the southeast swept over Halifax, causing a great many disasters to the shipping in the harbor.

aring down fences, blowing over chimney tops, d in part unroofing houses on shore. The rm continued through the night. No less than enty-five schooners were seriously injured; in ne cases having their masts, jibbooms, bow-its, rails and bulwarks carried away, and the lls more or less stove in. The steamer Delta s run into by a schooner and lost her fore-yard the storm appeared to pass over the whole insula, it is feared that much damage was sus-ned by vessels along the whole coast.

—The Thorold fire company had their annual ter supper and ball on Wednesday last; 150 ies and gentlemen were present.

BARQUE MARIA.—The barque Maria, McKen-z master, from Quebec for Port Medoc, Wales, been lost on the Newfoundland coast, and r of the crew drowned. Six of the survivors e landed at Halifax, N. S., on the 10th inst. Maria was 285 tons register, and sailed from bec on the 5th of November, for Port Medoc, h a cargo of square timber, deals, staves and wood.

TESTIMONIAL.—Wm. Richardson, representing Montreal Assurance Company, Mr. Haldan, of the Etna, and G. Rumball & Co., of the nix, presented Captain Rowan, of the steamer er Spray, with a token of their appreciation is conduct on the occasion of that vessel being en ashore off Chantry Island, by which the erwriters were saved from a heavy loss.

—Messrs. Barclay, Curls & Co., of Greenock, ntly launched the Lake Erie, a fine iron sail-ship of 950 tons register, intended for the th American trade. The vessel has been t for the Canada Shipping Company of this , the owners of the Lake Ontario. The com-y have contracted, it is said, for seven other ally fine vessels.—[Montreal Gazette.

TEAMER FRANCIS SMITH.—This vessel will lowed to remain in her present position in the till spring. She is considered safe till that when it is said she can be got off without ulty. The loss is estimated at $8,000.

N INSTRUCTIVE INCIDENT.—The following ven as an actual occurrence:—In one of our its a representative of an insurance company d upon a merchant in the vigor of a healthy hood, apparently highly prosperous, who was insured. This gentleman listened to the ments made with some interest, but finally that he was compelled, just then, to use his s in mercantile operations, but should soon dy to take out a $10,000 policy. The agent ested that his very circumstances were an ar-ent for that immediate protection for his y which insurance alone could secure, and if he felt able to give no more than $5,000 or less, it might prove of great benefit to them. man felt the force of the reasoning; and was us to get rid of the agent. The result was plication for a policy of $3,000. The two d; the former to die within ten days from a n attack of fever, the latter to forward the ent which gave his widow three thousand rs, and it was all she had.

VICTORIA MUTUAL INSURANCE COMPANY.—following is the report of the committee ap-ted by the Board of the Victoria Mutual In-ce Company on the subject of establishing a h for insuring buildings on the line of the ilton water pipes:

In compliance with a resolution of the Board, the 7th inst., directing us to take such ac-s we might deem advisable towards the es-lishment of a branch in this city, to meet the irements (by way of insurance) of those whose rties are protected by the line of water pipe, to report,

That the Act 22, Victoria Cap. 22, under which company was incorporated, amply provides separation of its business into two branches partments, upon the following conditions:

1. That the Directors prepare a scale of risks for each department.

2. That they direct separate and distinct accounts to be kept.

3. That members shall only be liable for claims against the department in which they are insured, and not the one for the other.

4. That all necessary expenses incurred in the management and conducting of such departments, shall be assessed and divided between each in proportion to the amounts insured in each.

To afford complete security to policy holders for the payment of probable loss, it is the opinion of your committee that premises for insurance to the extent of $100,000 should be obtained before issuing a policy from the proposed branch.

That in lieu of cash, premium notes be accepted, a small per centage of which should be paid in cash to meet the expense of management. The balance subject to assessment for the payment of loss.

That on account of the extra security of this district, afforded by the hydrants, no risk accepted by the proposed branch should be reinsured in other companies; inasmuch as the money paid for premiums would probably exceed the whole amount assessable for loss in this district.

By following principally the foregoing principles the Victoria, in the short space of five years, has attained a substantial position amongst insurance companies, having issued during that time 7,153 policies, and now possessing in available assets for the payment of loss, a sum exceeding $100,000.

It is, therefore, the intention of your committee to ascertain the views of such as are interested in the proposed object, by calling upon them without delay. (Signed,) Geo. H. Mills, T. Mellwraith, A. T. Wood, P. Carroll.

Risks to the extent of $114,000 have since been obtained.

INSURANCE COMPANIES.

The following are the Insurance Companies which have received licenses to transact the business of Insurance in the Dominion, viz.:—

I.—*Canadian Companies.*

The British America Assurance Company, deposit $16,166 Cash—Fire and Inland Marine.

The Canada Life Assurance Co., $17,000 Cash—Life.

The Western Assurance Co., $17,000 Cash—Fire and Marine.

The Provincial Insurance Co., $16,666 Cash—Fire and Inland Marine.

The Agricultural Mutual Assurance Association, $12,000 Cash—Fire.

II.—*British Companies.*

The North British and Mercantile Insurance Co., $50,000 Cash; $100,258 Cash—Fire and Life.

The Liverpool and London and Globe Insurance Co., $50,000 Cash; $62,293 Canada 5's; $38,400 Canada 6's—Fire and Life.

The Royal Insurance Co., $96,982 Cash; $53,533 Canada 5's—Fire and Life.

The Reliance Mutual Life Assurance Society, $50,000 Cash—Life.

The Imperial Insurance Company $54,993 British 3 per cts.; $48,667 Canada 5's; $1400 Canada 6's.

The Northern Assurance Co., $37,196 Cash; $12,166 Canada 5's; $2,000 Canada 6's—Fire.

The Lancashire Insurance Co., $33,383 Cash; $18,666 Canada 5's.

The Phœnix Fire Insurance Co., $50,171 Cash; $50,126 Canada 5's—Fire.

The Commercial Union Assurance Co., $51,171 Cash; $50,613 Canada 5's—Fire.

The Life Association of Scotland $150,000 Cash—Fire and Life.

The Standard Life Assurance Co., $150,000 Cash—Life.

The Queen Insurance Co., $50,000 Cash; $51,100 Canada 5's—Fire and Life.

The Edinburgh Life Assurance Co., $150,515 Cash—Fire and Life.

The London Assurance Corporation, $150,000 British 3 per cts.—Life.

The Scottish Provincial Assurance Co., $50,171 Cash; $50,446—Fire and Life.

The London and Lancashire Insurance Co., $50,171 Cash—Life.

The Briton Medical and General Life Association, $100,343 —Life.

The Star Life Assurance Society, of England, $100,643.86 Cash—Life.

The Guardian Insurance Company, of England, $100,643.86 cash—Fire and Life.

III.—*American Companies.*

The Home Insurance Company of New Haven, Conn., $70,000 U.S. 5-20's—Fire.

The Ætna Insurance Company, of Hartford, Conn., $1,490 Cash; $48,510 Bank Stock—Fire.

The Hartford Insurance Company, of Hartford, Conn., $130,000 U.S. 5-20's—Fire.

The Phœnix Mutual Life Insurance Co., of Hartford, Conn., $70,000 U.S. 5-20's—Life.

The Connecticut Mutual Life Insurance Co., of Hartford, Conn., $140,000 U.S. 5-20's—Life.

The Travelers' Insurance Co., of Hartford, Conn., $140,000 U.S. 5-20's—Life and Accident.

The Ætna Life Insurance Co., of Hartford, Conn., $140,000 U.S. 5-20's—Life.

The New York Life Insurance Co., $75,000 U.S. 5-20's—Life.

The Atlantic Mutual Life Insurance Co., of Albany, N. Y., $50,000 U.S. 10-40's—Life.

The Equitable Life Insurance Co., of New York, $75,000 U.S. 5-20's—Life.

The Union Mutual Life Insurance Co., of Maine, 50,000 U.S. 6's of '81—Life.

MONTREAL FIRE BRIGADE.

We believe the Fire Department of no city in America is so economically managed as that of Montreal. Certainly none is more efficient; therefore, to speak commercially, we have the best article at the lowest price. This is no doubt due to the perfection of discipline in the department, and the admirable general working of the fire-alarm telegraph. Strong indeed must be the wind, inflamable the materials, and rearly absolute the want of water, if a fire should now be allowed to gain such head as to become serious. This being the case, let us see how we compensate the members of this efficient fire brigade of ours, as compared with the wages paid in, say, five of the principal cities of the Union,

The subjoined figures show the annual cost per head of the fire departments, respectively, of the following cities:—

	Cost.	Population.
Chicago.....	$276,720.....	250,000
Detroit.....	63,000.....	85,000
Louisville.....	82,000.....	140,000
St. Louis.....	137,000.....	250,000
Baltimore.....	66,000.....	250,000
Montreal (gold)	18,125.....	120,000

From this it will be seen that Chicago pays $1.10 per head; Baltimore, $0,27; Detroit, $0.74; Louisville, $0.60; St. Louis, $0.55; and Montreal only $0.15, equal to $0.23 U. S. funds. So that our most efficient fire department is maintained at a rate of only about one-fifth of the cost of the fire department of Chicago; and the difference of rate between that of Montreal and the fire departments of the four other cities of the Union which we have cited our readers can calculate for themselves; but in every instance, except Baltimore, it is very great indeed.

The difference, too, between the rate of pay of the members of the fire brigade of the American cities just enumerated, and those of the Montreal fire brigade, is also striking. Our fire brigade has 16 men at $300, or $408 in U. S. funds; 9 men at $400, or $544 U. S. funds; 9 men at $500, or $680 U. S. funds; whilst the American firemen receive $1,000 each, and the drivers and horsemen $924 each.—*Witness.*

THE CANADIAN MONETARY TIMES
AND
INSURANCE CHRONICLE.

THE publishers will have the pleasure of sending this week to each Canadian subscriber of THE MONETARY TIMES, the first number of the REAL ESTATE JOURNAL, which will be sent regularly in future every fortnight, the subscription price being included in the $2.00 charged for THE MONETARY TIMES. In these days of cheap newspapers the publishers find this step to be necessary in order to keep pace with the times. The business public may now get the two papers for the price of one—each of which is worth more than the subscription price to any business man.

BANKING.

THE CANADIAN MONETARY TIMES AND INSURANCE CHRONICLE is the only paper in the Province which makes banking a specialty.

INSURANCE.

It is the only insurance journal in Canada. Every one who desires to know the character and standing of the Insurance Companies doing business in Canada can only get the information in its columns.

MINING.

It is the only journal which keeps regular correspondents in the principal mining districts, and affords strictly reliable information respecting mining matters.

COMMERCE.

Everything of interest in trade and commerce is carefully noted in the markets of Toronto, Montreal and the Maratime Provinces, making it more valuable in this department than purely commercial journals.

STOCKS AND SHARES.

The market prices of stocks, shares and debentures of every class in which our people are interested, as quoted in the centres of trade, are always to be found in the Stock and Share list.

PUBLIC COMPANIES.

The proceedings of all public companies in the country are reported, including banks, insurance, railway, mining, and other companies, building societies, &c., thus affording the only complete record of the doings of public companies to be obtained in the Province.

These and other features make it invaluable to the Banker, Merchant, Insurance Agent, Miner, Capitalist, Manufacturer, and all business men.

SUBSCRIPTION PRICE—The MONETARY TIMES and REAL ESTATE JOURNAL, only $2.00 a year in advance.

Address, THE MONETARY TIMES,
Toronto, Ont.

☞ The Publishing Office of THE CANADIAN MONETARY TIMES AND INSURANCE CHRONICLE is removed to No. 60, Church Street, 4 doors north of Court Street.

The Canadian Monetary Times.

THURSDAY, DECEMBER 24, 1868.

MR. WILMOT, OF NEW BRUNSWICK, ON THE CURRENCY.

This gentleman has responded to a series of questions on the currency by a committee of the House of Commons, and has published his replies in the New Brunswick papers. They seem to have excited some considerable attention, partly from their bold and confident assertions, and partly from the semi-logical air which seems to pervade them, in which, to say the truth, there are as many fallacies and foolish fancies covered up as it has ever been our lot to meet within the same limits.

These fallacies and fancies are all branches of one fundamentally false notion, namely, that it is not desirable, or necessary, to have any fixed standard of value. Mr. Wilmot does not believe that a dollar should mean the same thing to-morrow as it does to-day, and he would have a currency which would fluctuate, not only in amount, but in value, with the necessities of the government, and the circumstances of the times.

It is somewhat cool, we must confess, at this time of day, for a gentleman professing to have financial ability to denounce the monetary system of Canada because it rests on a gold basis, and deliberately to advocate an irredeemable currency. When universal experience tells us that gold and silver are the only solid basis of monetary operations; when writers on finance, almost without exception, however widely they may differ on other matters, agree in the same conclusion; when the trade between every nation under heaven, is, and always has been, conducted on the same principle; when countries which have been forced by pressure of circumstances to deviate from this standard have invariably suffered such intolerable evils as to be willing to endure the most painful sacrifices in order to reach the path of safety again, it is idle to talk of a fixed price for gold being a relic of barbarism.

The man who can ascribe panics to this cause rather than to extravagance and overtrading is not to be reasoned with. Throughout the whole of Mr. Wilmot's answers the notion crops up again and again, that the true remedy for financial evils is plenty of irredeemable paper money. He does not seem to have the slightest notion that a country, at this time of day, cannot isolate itself from the rest of the world, and, as respects other countries, may run into debt just as an individual may with other individuals. When a merchant runs into debt, all goes along smoothly enough so long as his creditors are willing to trust him. His expenditure may be over-running his profits by thousands a year, yet if he can only keep up his credit, and his correspondents continue to supply him with goods, he finds no difficulty in getting along. We have had plenty of examples of this kind of thing in every commercial community, and the end is invariably the same, namely, a break up of credit, a stoppage of supplies, an insisting on payments, law suits, bankruptcy, and poverty. The crash is a painful affair, and causes misery to the individual, to his creditors, his bankers, his family, and everybody that had any relations with him.

Now supposing this gentleman, in the midst of his bankruptcy, to reason in this manner:—What scandalous laws and customs these are which compel a man to pay his debts!—If I had never been pressed to *pay*, all would have been right.—Why could not my paper be kept afloat, as usual? Why could not things go on smoothly, as they did before? It would have been far better for all parties. I was a good customer to the foreign merchant. I was a capital customer to the neighbouring tradesmen. All of them I paid in paper, and paper answered their purpose very well. What madness then it was to bring on this crash. It is not I who am to blame, it is my creditors, who are such fools as to stop all our trading by insisting on my paper being turned into miserable dirty gold.

Stripped of specious phraseology, it is precisely thus that Mr. Wilmot reasons respecting the panics which sweep periodically over the commercial world. Everybody that has studied them is aware that they are always preceded by a period of extravagance, overspending, recklessness and folly exactly corresponding to the overspending of an insolvent trader, and that the panics are just the same thing to the country as stopping payment is to a merchant. It is the idlest nonsense to blame the gold basis as the cause of the panic, just as it is idle nonsense of the trader to blame his creditors for his stoppage. The panic is the natural result of the extravagance, and its counterpart is to be found over and over again in private life. Not to speak of a trader, how often it is the case that a private individual spends more than his income, gets into debt, his creditors press him and he is sued; after a world of trouble and anxiety he manages to get time, and by dint of severe economy comes round again after awhile, and pays all he owes.

Now the trade of a country, taken as a whole, with other countries, is precisely analagous to the dealings of an individual with individuals. When the balance of trade is against it, continuously, from excessive foreign importations, it simply indicates extravagance, overspending, and getting into debt. The sure result is tightness of money, as it is with any man who spends more than his income. People of that sort are always "hard up;" and a country may be "hard up" and must be when extravagance and overspending produce their natural fruit.

Mr. Wilmot's remedy for this state of things is to issue more paper, which is precisely the same as for a spendthrift to issue more of his promissory notes to confound creditors, if they are so simple as to take them. Common sense says the proper remedy would be to economise and work harder. Let the country produce more and spend less—that would bring things round beyond doubt. In private life this would be universally conceded, but in dealing with national affairs people are apt to get mystified and leave common sense altogether.

It cannot, however, be too often repeated that the laws of credit and finance are inevitable and irresistible. A nation can no more escape their operation than a merchant. *Promises to pay, if never fulfilled,*

redit, no matter who is the promisor. Mr. Vilmot would have the country flooded with its of paper containing promises which are ever meant to be fulfilled, and he is insane nough to suppose that such rubbish would revent extravagance and overspending from roducing their natural results.

He of course does not say all this in ex-ress terms, but no one can read his answers arefully without perceiving that this is the al drift of them.

We shall notice other points in these an-vers by and by.

GREAT WESTERN RAILWAY.

Rumour seems to delight in paying its res-ects to the Great Western Railway. No oner is one story exhausted than another mes to take its place. The last is a state-ent to the effect that the New York Cen-al have offered to lease the Great Western. r. Swinyard has addressed a letter on the bject to the President of the Stock Ex-ange in New York in which he denies that ch an offer has been received by the Great estern.

CONNECTICUT MUTUAL LIFE.—The general ency of this Company for Ontario has been re-oved to this City. It is under the management Mr. D. L. Sills. Mr. Fee will have the local ency.

MADOC GOLD DISTRICT.

(From our own Correspondent).

BELLEVILLE, Dec. 21, 1868.

Next to the existence of gold in the rocks or l of any particular district, the most advan-geous mode of separating the metal from the er mineral substances in which it is contained, with which it is combined, is the subject which of the greatest importance to the miner. I ll, therefore, in the absence of other matter, tice a few of the processes by which sanguine jectors propose to enrich the fortunate holders gold and silver claims, and themselves. As the called Stephens flux is that which has been ered into the world with the greatest flourish trumpets, I shall pass it first in review, giving short account of the flux itself, and detailing experience of its working in this quarter.

The account given by the proprietors of the covery of the flux is shortly as follows: A cer-n Colonel Stephens, (who is represented as tally ignorant both of practical mining and of neralogical science, and therefore a most unlikely son to solve a problem which has taxed the ergies of the ablest scientific men of many nerations,) while confined in a Southern prison ring the war of secession, heard much conversa-n among his fellow prisoners respecting the iculty of separating the gold from the sulphur-in which it is so often contained. These con-sations excited a strong desire in his mind to d some profitable method of extracting the cious metal from its baser accompaniments. fter his release, he happened to get possession o small quantity of this, to him, unknown ma-al, and took it to Mr. Guild, an assayer in ton, whom he requested to make an assay wh it of any gold-bearing ore he might have in his possession. Mr. Guild accordingly smelted with a portion of this flux a sample of ore which he knew to yield by "mint assay" $300 to the ton, and obtained therefrom no less a result than $1,400 per ton. Suspecting some error, as well he might, the assayer repeated the process, and again obtained the same result, $1,400 per ton.

The Colonel then had a furnace erected, in which he treated 2,500 pounds of ore, which had never yielded by other processes more than $22 per ton; but from which he extracted at a single melting, gold to the value of $539.58, or at the rate of $431 per ton. This is his own account; but there are not wanting those who say that the flux used on that occasion was heavily "salted."

The experience we have had of the flux and its vendors is as follows: Early in the present year, two gentlemen from Wisconsin, Messrs. Jones and Robbins, visited the district, and took from a mine in the township of Hungerford a quantity of pyritiferous ore, which they took to Boston, and had it assayed by Mr. Guild, who gave them a return of $40 per ton. On the faith of this they returned to Canada, purchased the mine, put up reduction works according to plans, etc., furnished them by the Stephens Company, who agreed to send one of the partners to instruct them in the whole process of reduction by their method. When the works were finished, one of the Boston gentlemen came accordingly, and under his directions they smelted about three tons of ore, from which, instead of the pure metal they expected, they got about a ton and a half of "matt," i. e., a combination of crude metallic matter which might or might not contain gold as one of its component parts, but in which it was quite as intangible as in its original matrix. On being requested to go on and complete the process, the Boston man refused to do so, telling them that it would be necessary for them to send the matt to Boston to be refined, offering to do it for ten cents on the dollar of gold value. This they refused to do; and so the matter stands between them and the Boston Company at present. Messrs. Jones and Robbins have since dispatched a portion of said matt and also of the crude ore to Swansea, Wales, to be reduced, so that its value may be tested in a satisfactory manner.

The readers of THE MONETARY TIMES will of course draw their own inferences from the above related facts. My own I must candidly say, are not very favorable to the flux as a medium for the economical reduction of gold ores, or to the straightforwardness of its "proprietors." Even if it were all they assert, it could not, at its present price, be applied to the working of poor ores, as the expense attending its use could not be less than $25 to $30 per ton.

The Richardson Company have had another lot of twenty-five tons of their ore reduced, the produce of which, though not yet melted down, is estimated by their manager at $150, or $6 per ton. Another lot, which was being operated upon at the time his message was sent off, promises, from the appearances of the amalgam which was forming, to give a better result than the foregoing.

The mine at Mallorytown still continues to give good assay results. The machinery is rapidly approaching completion. The building is ready for its reception, and the owners expect to be able to start work as soon as the spring sets in.

SILVER ON LAKE SUPERIOR.—Mr. Thomas Macfarlane has assayed the silver ores from the veins discovered by him at Mhunder Cape last summer, and we are authorized to state that the result of his assay is most satisfactory, showing a result of more than 1,900 ounces of silves to the ton of ore. The samples assayed were carefully taken under the supervision of Professor Dawson as exhibiting a fair average of the productive portion of the vein at Thunder Case. Similar samples have been sent for assay to an assayer in the United States, the details of which assay, as well as Mr. Macfarlane's, will shortly be published.

PEAT.—An American Company has been formed in the State of Connecticut for the extraction and manufacture of peat after the process patented in Canada and the United States by Mr. Aubin, of Montreal. The capital of the Company is $250,000, in which the patent right goes in for $125,000. Mr. A. Hibbard, of Montreal, is one of the directors, and Mr. Aubin consulting engineer of the Company. Three other companies under the same patents will, we understand, begin or continue operations in Lower Canada, one at Sorel, one at Valleyfield, and another at Belœil.

—On or about the 15th day of January next, S. P. Mansfield of Detroit, Alex. Dearborn, and G. B. Nichols of Boston, J. B. Hills of Newton, Mass., and J. W. W. Ward of Ottawa, will petition the Lieutenant Governor in Council to incorporate the "McNab Iron Company," whose purpose is the mining for iron and other metals, and the washing and smelting of ores in the township of McNab, county of Renfrew, with a nominal capital of $50,000; stock subscribed, $30,000; and the amount to be paid in before granting the charter, $10,000, to be invested in mineral lands held by trustees for the company.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending Dec. 4, 1868.

Passengers	$30,825 34
Freight and live stock.....	35,826 42
Mails and sundries.....	2,284 45
	$68,936 21
Corresponding Week of '67.	67,934 86
Increase.....	$1,001 35

NORTHERN RAILWAY.—Traffic receipts for week ending Dec. 19, 1868.

Passengers.....	$2,302 55
Freight..... ...	5,296 16
Mails and Sundries	291 90
Total Receipts for week.....	$7,890 63
Corresponding week 1867....	6,385 61
Increase.....	$1,504 98

THE INTERCOLONIAL RAILWAY.—The Railway Commissioners have issued the following notice:—"The Commissioners appointed to construct the Intercolonial Railway, give public notice that they intend to let four sections of the line at once.

"Sections Nos. 1 and 2 embrace about 40 miles from a junction with the Grand Trunk Railway, near Riviere Du Loup, and each section will be about 20 miles in length.

"Section No. 3 will be about 26 miles in length, and lies between the east side of the Restigouch, River to near Dalhousie in New Brunswick.

"Section No. 4 will be about 24 miles in length and lies between Amherst and River Phillip in Nova Scotia.

"Plans and profiles, with specifications and terms of contract will be exhibited at the offices of the Commissioners in Ottawa, Riviere du Loup, Dalhousie, St. John and Halifax, on and after the 11th January, 1869, and sealed tenders addressed to the Commissioners of the Intercolonial Railway will be received at their office in Ottawa, up to 4 o'clock on the 8th February, 1869.

"Tenders will shortly be called for other section of the line as soon as the plans are sufficiently advanced."

The Commissioners are to assemble at St. John, N. B., on the 29th instant, where Mr. Fleming, Intercolonial Engineer, is to meet them. The Commissioners intend to make a local examination of the portions for which tenders will be asked on Monday.

About 80 miles are to be put under contract,

part of which is in each Province. It is divided into four sections, so that only four tenders can be accepted. Tenders will be addressed to the Commissioners here. The Commissioners will not decide, but will recommend to the Privy Council the tenders to be accepted.

The Commissioners have made the following appointments:—C. S. Ross, of Kingston, Secretary; J. B. Martel, of Quebec, Assistant Secretary; Wm. Wallace, of Simcoe, Accountant.

—It is reported that Mr. Rose and the Great Western Railway Company have come to an agreement for the liquidation of the debt due to the Canadian Government by the road.

Peat Maker.—*Le Pays* says that a peat-making machine, the invention of Mr. Aubin, was put into operation at Sorel and Valleyfield last summer, and worked so satisfactorily that some American capitalists are about to form companies to develop the new industry. One of these companies is about to be organized for the State of Connecticut, and will have a capital of $25,000, of which amount $10,000 will be paid for the patent. Mr. Ashley Hibbard has been elected one of the directors, and Mr. Aubin, consulting engineer of this company.

The Plattsburgh and Whitehall Road—Massawippi Railway—Missisquoi Centre Route.—We see by the Plattsburgh *Republican* that the grading for the Whitehall and Plattsburgh Railway is nearly completed from Fort Henry to Ticonderoga, and the rails about to be laid down. This new route along the Western bank of Lake Champlain will give Montreal still another direct line of communication to New York, and by 1869, there will therefore be no less than three in operation.

Wooden Railways.—Mr. Hemming, M. P. P. for Drummond and Arthabaska, who has a Wooden Railway project on foot, for connecting the back towns of his own County with the Grand Trunk Railway, has been to New York State to see the Clifton Wooden Railroad, and in a letter describing his visit, says:—

"There was no appearance of the wheels cutting into the rails, even at the sharpest curves, neither did I find a single rail that had the appearance of being crushed. In fact the rails were so level and smooth that I walked the whole distance on the rail itself, at a pretty smart pace, and I have no pretension to being a "Blondin." We arrived at the train a little before sundown, which consisted of a ten ton locomotive, made expressly for the line—four trucks, carrying between five and six tons of iron ore each, and a car-load of lumber; the whole train weighing between forty and fifty tons. I should add that one of the trucks containing the ore was front of the engine. We now started in good earnest at a rate of about twenty miles an hour, and soon came to a part of the road which was nearly all supported on trestlework, there being no less than five viaducts, varying from 124 to 400 feet in length, and from 25 to 35 feet from the level of the ground, in a distance of half a mile. Imagine my surprise, when I found that the engine driver on arriving at this trestlework, so far from slackening his speed, actually increased it to thirty miles an hour!

The grading of course is the same as for an iron, except that stiffer grades can be ascended on the wooden road. The ties are of the ordinary description, but are not squared on any side, and on the Clifton road are placed at the usual distance of three feet apart, except on the trestles, where there are three ties to every two yards. In future, however, Mr. Hurlburt proposes to put the three ties to every two yards, as he proposes running heavier engines. The rails on the Clifton road are of maple, six inches by four; Mr. Hurlburt intends in future to alter their shape a little without increasing the quantity of timber, making them three and half inches on top, by seven inches deep, so as to be better adapted to the increased weight of engines, (fourteen tons instead of ten.) Notches are cut in the round ties to such a depth as to keep the bottom of the rail about two inches from the ground after the road is ballasted, and the rail projects sufficiently above the notched tie to allow the flange of the wheel to pass. The rails are fastened to the ties by a couple of hardwood wedges, driven in opposite directions on the outside of the rail, within the notch. This has the effect of making the whole superstructure one solid mass without the addition of any spikes or pins. In making the curves the rail itself is bent to the required shape, so that there is no angularity whatever in the line of rails. The trestles are of the simplest description. They consist of two upright sticks of square timber immediately under the rails, let into a transverse stick, which are braced to the sticks of timber laid lengthwise from one trestle to another, immediately under the line of rails in each direction. This is further supported by a similar stick of timber at each side, from the head of the trestle to the base, in a slanting direction, the whole of which is let into a squared log at the base. The wooden rail is not, I believe a new invention, but Mr. Hulbert has succeeded in making it available without using a particle of iron in the whole structure, and has, moreover, demonstrated that such railways can be used for long distances at a moderate cost, and this through a country where an iron line, as ordinarily constructed, would be practically an engineering impossibility. Mr. Hulbert says that he is willing to contract to lay the superstructure of a wooden railway of his own improved construction at the rate of fifteen hundred dollars, American currency, a mile where maple and hemlock can be obtained at reasonable rates."

THE GOVERNMENT AND THE TELEGRAPH.

The discussion in England, both in and out of Parliament, in favor of the government controlling the telegraph by buying up all the existing lines in that country, has extended to the United States and the government at Washington is urged, in certain quarters, to place the telegraph system under the management of the Postmaster General by similar means. It seems to us about as reasonable for the government to undertake the purchase and management of all the railways as all the telegraph lines in the country. The one kind of enterprise being not dissimilar to the other. That a government steps out of its legitimate sphere when it embarks in any such business can not be denied, while there are grave objections to government interference with the telegraph apart from the mere question of principle. In a country governed by parties as this is, it will never do to have the government of the day controlling the means of telegraph communication, and the same argument applies to England, where it has been already advanced with convincing effect, and inasmuch as party spirit runs higher here than there the danger would be correspondingly greater. The telegraph would, it may be accepted as a certainty, be used as a political machine by the party in power, and this of itself is sufficient to condemn government interference with it. There is no knowing how far the rights of the press and the people might be trampled upon in this particular by unscrupulous partizans in office, and consequently they should never be invested with the power for mischief which privileges of this kind would give them.

The advocates of the proposed scheme will, before much progress is made towards the desired end, have to show that the existing telegraph companies have failed to meet the wants of the people, and are, moreover, incapable of meeting them. Further, it will be also incumbent upon them to prove that the government will be better enabled to meet these requirements than the telegraph companies, and that there would be no drawbacks or inconveniences to the public to counterbalance any advantages arising from governmental administration. That the telegraph companies have a stronger incentive to improvement in everything connected with their business than the government would have is obvious, and the enterprise they have shown in the past is a guarantee for the future. The English telegraph companies have been fully as active as those of the United States in their efforts to improve, extend and cheapen telegraphic communication. In 185[illegible] insulation by means of gutta percha was adopted and in 1857, and again in 1862, further improvements in insulation were effected. In 185[illegible] Hughes' "type printers" were introduced, and in 1863, Caselli's fac simile telegraph, while in the same year ', printing instruments" and "Wheatstone's automatic system," as also Hawath's system of working without wind were tried. In the country, the Atlantic and Pacific, the Frankl[illegible] and other lines worked in opposition to the Western Union Co. are being rapidly extended and in proportion as their business increases the charges for the transmission of messages are reduced. Competition is the life of trade, and the people should encourage it in the business of telegraphing as much as in anything else. There would, of course, be an end to this if the government monopolized the wires, and whether the government employees did their work thoroughly or the reverse, there would be no redress, and improvements travel slowly through official channels while red tape, in this country as well as elsewhere, interposes a vexatious bar to progress. *Albion.*

Contract.—An exchange says that Messrs. Walter and Frank Shanley have contracted with the State of Massachusetts to build the Hoosac tunnel on the Troy and Boston Railway. It is to be four and a half miles long and has been partially completed, but the company which attempted it failed to carry it through. The Messrs. Shanley have taken the contract for $5,000,000.

Niagara Ship Canal.—The Niagara Ship Canal was brought up in the United States House of Representatives on Monday, and made a special order of the day for the 11th prox. by a vote of 109 to 40. Some members voted for the order out of good-will to the mover, but the vote was so strong that the friends of the measure believe it can be carried through. The bill provides that the work shall be done as a military and commercial necessity by the Government, under the direction of the Secretary of War: that it shall be begun within one year after the passage of the bill and finished as speedily as possible, and that the control of it shall be retained by the United States. The engineer's estimate as to the cost of the canal is about $12,000,000.

—The preliminary survey of the route for a wooden railway, from Sherbrooke, Q., eastward has been commenced by Robinson Oughtred.

ONTARIO LEGISLATION.

Prior to the adjournment of the Ontario Legislature the following bills passed a second reading:

No. 113, to grant certain powers to the Ontario Farmers' Mutual Insurance Company.

No. 84, to incorporate the Ontario Trust and Investment Company.

No. 83, to incorporate the Presque Isle and Belmont Railway Company.

No. 108, to incorporate the Simcoe and Muskoka Railway Company.

No. 109, to incorporate the Norfolk Railway Company.

No. 106, to amend the Act to incorporate the Port Whitby and Port Perry Railway Company.

No. 72, to amend and confirm the charter of the Ottawa and Gloucester Road Company.

No. 95, to incorporate the Mutual Fire Insurance Company of Hamilton.

No. 120, to incorporate the Caledonia Manufacturing and Smelting Company.

The following passed its third reading:

No. 112, to amend the Act passed in the 28th Vic., respecting the granting of charters of incorporation to manufacturing, mining and other companies.

Among the bills assented to by the Governor were:—An Act for the incorporation of the Ontario Mutual Life Assurance Company. An Act to explain the 36 sec. of Hamilton Debenture Act of 864, and to legalize the application of the rates ssued by the City of Hamilton under the By-law eferred to in that section.

Law Report.

Fire Insurance—Forfeiture—Waiver.—n a recent case of the Supreme Court of Iowa, he following judgment was given:

1. Where a policy for insurance provides that f the risk of fire to the building insured shall be ncreased by a change of occupation or other means ithin the control of the insured, without the ritten consent of the insurers, the policy "shall e void"—this condition being inserted for the enefit of the insurers—they may dispense with mpliance therewith, or waive a forfeiture of the olicy incurred by a breach of the condition, and ereby preclude themselves from setting up the ndition, or such breach thereof, as a defense to n action for a loss subsequently occurring. And ch dispensation or waiver need not be in writing r founded on any new consideration.

2. Any acts, declarations, or course of dealing y the insurers, with notice of the facts constiutes a breach of a condition in the policy, recognising and treating the policy as still in force, id leading the insured to regard himself as still rotected thereby, will amount to a waiver, of a rfeiture by reason of such breach, and prevent e insurers from setting up the same as a defense hen sued for a subsequent loss.

3. A local agent for a foreign insurance comny, authorised to effect insurances, and entrustwith the blank policies of the company, with thority to fill up, countersign, and issue them, fix rates of premium, give consent of the comny to change of occupation and risk, assignment policies, and other things which by the rms of the policy require such consent, and to ncel policies in his discretion for increase of risk other causes is to be regarded as the general ent of the company, authorised to transact the siness of insurance for them at the place of his ency; and has power, in the absence of a limiion of his authority, known to those with whom deals, to waive forfeitures of policies, by reason breaches of conditions therein, and to dispense th such conditions, and the acts and declarations such agent, recognizing and treating a policy as id and subsisting, with knowledge of facts conituting a breach of its conditions, will be bindg on the insurers.

4. A consent by the insurers to the occupation the insured building for a certain manufactory, ries with it a consent to the keeping and use on e premises of any article necessary to the manufture, or commodity used therein, although the eping of such articles without the written const of the insurers is expressly prohibited in the licy. And such consent to the occupation for manufacturer operates to waive or dispense h such prohibition in the policy.

5. Where the agent of the insurers, after a change the occupation of the insured building, involvi an increase of risk, consented to the continuce of the policy, on condition that an iron door uld be put into the building, but without limiti any specific time within which this should be e, the insured was entitled to a reasonable time t in the door, and its being put in was not a dition precedent to the continuance of the icy. And if, after the exercise of reasonable genee to get the door put in, but before it was in put in, the building was destroyed by fire, insurers cannot resist payment of the loss on ground of the door not having been put in.

Jettison—Liability of Insurer.—If goods are thrown overboard in order to save a vessel from some danger, there arises a right on the part of the owner of these goods to claim general average from the owners of the ship, freight, and of the rest of the cargo—that is, the owner of the goods jettisoned having been deprived of his goods for the benefit of the owners of the rest of the cargo and of the ship, is entitled to claim from these latter compensation for the loss thus sustained. The owner of the jettisoned goods does not recover the whole of the value of his goods, as it is but right that he, as well as others, should contribute to make good the loss. All the owners of ship, freight and cargo, including the owners of the jettisoned goods, pay in proportion to the value they had at stake when the jettison took place.

In *Dickinson* v. *Jardine*, 16 W. R. 1169, goods had been properly jettisoned, and the ship and cargo had consequently come safe to port, and were therefore liable to a claim for general average. The jettisoned goods were insured, and their owner (the plaintiff), instead of first claiming payment of the general average to which he was undoubtedly entitled, and then claiming from the underwriters the amount of his actual loss, claimed directly from the underwriters the whole value of the goods, and contended that it was for the underwriters, and not for him, to obtain payment of the general average. The underwriters refused to do this, and argued that although they were liable to pay the whole loss actually suffered, they were not bound to pay more, and that the plaintiff must obtain payment of the general average contribution for himself; and that the underwriters were only liable for the amount of loss that remained after deducting the amount so due to the plaintiff, as that was really the amount of his loss.

It was held by the Court of Common Pleas that the plaintiff was entitled to recover directly from the underwriters the whole value of the goods, and that it was for the underwriters to obtain payment of the general average.

There seems to have been no reported case in the English courts which decided this point, although there were several American authorities upon the question. Bovill, C. J., cites a passage from *Phillips on Insurance*, to the following effect:—"It is not a condition that the assured on goods must claim contribution by the other parties for a jettison before he can demand indemnity from his underwriters. He may demand it of them in the first instance." The Court decided in accordance with this passage, which now, therefore, correctly states the English law on the subject. We believe it has generally been the practice in London to consider the underwriters in such circumstances as those in *Dickinson* v. *Jardine* liable only for the actual loss caused by jettison after debiting the owner of the jettisoned goods with the amount due for the general average contribution. This is, however, quite opposed to the general principles of insurance law, and although it may be a convenient way of settling accounts between insurers and insured, it can have no legal force unless perhaps an unvarying custom to this effect could be proved. It is, however, of course competent to underwriters to insert in their policies an express stipulation limiting their liability in these cases, and there is no legal objection to such a course.

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, Dec. 15, 1868.

Our river is nearly frozen across, and all traffic has ceased except such as comes through the Victoria Bridge. We now see the importance of that vast, though expensive, structure. Our communication with the States and the south side of the river remain unbroken; usually at this period, till the ice bridge took, all connection with the opposite side ceased, or was carried on by canoes at very considerable risk to life and property. The same as with the Grand Trunk, we every year more and more appreciate the great advantages we derive from it; true we have paid rather dearly for our whistle, but now we could not do without it.

Our produce market remains very quiet, and flour has not materially changed from my last week's quotations. The sales are merely for local wants, nor do we now look for any export trade. The Grand Trunk Railroad brings us down our necessary supplies, and all shipped goes direct to Portland, so that we in Montreal have not the handling of it. Grain is nominal in price for all descriptions, and the same remark applies to provisions.

In my last week's letter to you I gave a short *resume* of the dry goods trade. Now I will give you a sketch of the grocery market for the fall season:

Groceries—The trade generally during the fall has been satisfactory. Some of our large jobbing firms have been operating beyond their means, and forcing goods off to all sorts of buyers in the West; others, not content with a good healthy business, have speculated in gold and other tempting things, and the consequence has been that some of our leading jobbers have gone down, but this by no means shows anything wrong in the general business. On the contrary, greater caution has been exercised than usual, and the losses have been lighter.

Chemicals have sold largely but at almost a nominal profit: this is owing to the large quantity, especially of soda ash, sent here on consignment, and therefore forced off at any price that will clear cost, thus leaving the importers a small chance of making a profit. Prices have ruled low.

Coffee—Owing to the low prices which have ruled during the last few months, a considerable business has been done, but I doubt if sales have been satisfactory to importers.

Fish have sold freely during the fall, and prices have ruled high; the catch generally has been light and consequently our supplies have been light. The fish market here is very much regulated by the price of pork, and when that is high the price of salted fish always rules proportionately high. The exception has been in dry cod, of which there has been a good supply, and prices are rather easier. Of good mackerel there are none on the market, and the stock of fish generally is light.

Fruit (imported)—The result to importers has been disastrous as regards raisins, but this has been the experience of the last two years. Our merchants have steadily over-imported. This year it was considered that the comparative failure of green fruit here would justify a larger import than usual, but such has not been the case, and importers have been the losers. In currants on the contrary an active business has been done at remunerative rates.

In Nuts, Sardines, &c., the usual amount of business has been done at fair prices.

Molasses—The business in this article is mostly regulated by the price of butter. This fall the price of molasses has ruled very low, and that of butter very high, consequently a very large business has been done. The market closes low but active.

Naval Stores—A fair business has been done, prices having followed the fluctuations of the New York market.

Oils—In *Cod* and *Seal* the rapid increase of price early in the fall restricted the amount of business; at the end of the season the market closed easier, and there was more disposition to realize on the part of holders. Stocks are light. In *Linseed Oil* business has been light, chiefly owing to the decline in England, which has caused buyers here to operate only from hand to mouth. From what I can hear prices of linseed oil have touched the bottom in England, and consequently we may look for a safe trade here.

RICE.—In this staple the ordinary amount of business has been done; stocks are light, but importers are timid, owing to the low price of wheat, which materially interferes with the price o. rice.

SALT.—A large business has been done during the fall and speculation has been rife; prices have fluctuated considerably, but the tendency has been upward. The market closes with light stocks, not more than sufficient for our requirements before the spring importations.

SUGAR.—In raw sugar a large business has been done, chiefly with the refiners, although several in the trade have sold largely to their country customers, of good grades. I may here remark that the lower qualities of refined sugars are rapidly superseding even the higher styles of imported. They are got up in more convenient packages, and not the same loss by drainage. I hear that the importers are satisfied with the result of the fall's operations; stocks are moderate and held for high rates. This is owing to the state of the New York market. Refiners have advanced their prices for all descriptions.

TEAS.—The business has been large and satisfactory to all interested. Stocks generally were only moderate, and of good grades very light. Good Japans are rapidly getting into favor.

TOBACCO.—In manufactured the business has been to the usual extent, and prices have been remunerative. The season closes with very light stocks. The "Prince of Wales" brand has become in such favor that the manufacturers have not been able to make it in sufficient quantity to meet the demand. I hear of some orders which they have had in hand for five to six weeks and not completed. *Leaf Tobacco* has ruled dull and prices low. The market closed without animation.

Toronto Market.

The general trade of the city is still quiet, and will remain so until after the holidays.

GROCERIES.—*Teas.*—Are quiet, and there is little doing except that some few lines have been placed with the city trade. The stock of teas in London on the 30th Nov. was 73,652,061 lbs., and in Liverpool 1,084,907 lbs. against 61,954,700 lbs., and 1,731,619 lbs. respectively. A telegram from Hong Kong, dated 2nd, gives the exports of tea from China up to that date at 112,100,000 lbs., being an increase of about 29½ millions of pounds on the exports to the same date last year. *Sugars.*—Our market is quiet; the New York market has fluctuated a good deal owing to the unsettled state of affairs in Cuba. *Fish.*—Quiet, and prices unchanged. *Fruit.*—There is a good demand for all kinds of fruit at steady prices. *Rice*—Unchanged.

HARDWARE.—Trade in heavy goods is a little better, and quotations are fully maintained.

PRODUCE.—*Wheat.*—Receipts for the week by cars 10,000 bush.; there is a fair demand for Spring wheat for milling purposes at $1.00 to $1.03, and all that offers at these prices is readily taken, but most holders ask more money. Some 8 or 10 cars sold at $1.01 to $1.03. Midge proof is also in good demand at the same quotations. Fall, prime white, is enquired for, and some few cars of choice have been placed for shipment at $1.1 to $1.20. Medium sold at $1.11 to $1.12, and there are few buyers above these figures. *Barley.*—Receipts by car 1.300 bush. There is little offered, and the demand is quiet at $1.25; sales of cars occurred at $1.22½ to $1.25. *Oats.*—Reecipts 2,400 bush.; there is a good local demand at 52c. to 54c. and sales occurred at 54c. *Peas.*—Nominal, no receipts.

FLOUR.—Receipts for the week 2,677 brls. No. 1 superfine is offered at $4.60, and there are buyers of choice brands at that price, while ordinary is nominal at $4.50 to $4.55. Extra is held at $5.50, with buyers at $5.25 to $5.30.

PROVISIONS.—*Dressed Hogs.* The market has closed brisk at higher prices; receipts light.—*Pork.*—Mess is in good demand both for Canadian and old American. Provisions nominal.

FREIGHTS.—The following are the present rates via Great Western Railway from Toronto to Liverpool, London and Glasgow, per Williams & Gowan's line of steamers: Beef, bacon, pork, hams, lard and tallow, in lots not less than one car load and upwards, $1.03 gold per 100 lbs.; grain in bags, in lots of five car loads and upwards, 3s 4d sterling per 100 lbs.; flour, 6s 9d per bbl.. To Liverpool via National line: Beef, bacon and pork, $1 per 100 lbs.; lard, in barrels and tierces, $1.06 per 100 lbs.; in kegs and tinnets, $1.17 per 100 lbs.; butter and cheese, $1.43 per 100 lbs. Through bills of lading granted.

The winter rates of the Grand Trunk Railroad to the Maritime Provinces came into force on the 1st inst., and are as follows: From Toronto to St. John, N. B., general merchandise, per 100 lbs., first class, 90c; second class, 65c; third class, 55c; flour, per bbl., 95c; grain, per 100 lbs., 48c. From Stratford, London, or St. Mary's—flour, $1.10; grain, 55c. From Brantford—flour, $1.10; grain, 58c. From Guelph—flour, $1.05; grain, 53c. From Oshawa, Newcastle and Bowmanville—flour, 89c; grain, 45c. From Montreal—flour, 62c; grain, 30c. From Toronto to Halifax, N. S.—general merchandise, per 100 lbs., first class, 90c; second class, 65c; third class, 55c; flour, per bbl., $1.05; grain, per 100 lbs., 53c. From Guelph—flour, $1.15; grain, 58c. From Brantford, London and St. Mary's—flour, $1.20; grain, 60c. From Oshawa, Newcastle and Bowmanville—flour, 99c; grain, 50c. From Montreal—70c for flour, and 35c for grain.

The Cotton Trade.

The Liverpool cotton statement of to-day, as received by cable, shows the following condition of supply compared with the two previous statements:

	Dec. 18.	Dec. 11.	Dec. 5.
Total stock of cotton, bales...	354,000	365,000	367,000
Total stock of American.....	51,000	49,000	44,200
Total afloat.....	255,000	238,000	254,000
American afloat.....	110,000	95,000	78,009
Total of all kinds stock and afloat.....	609,000	603,000	621,360

We have here a slightly improving condition of supply, especially in view of the late large shipments to the Continent from this country, the total Continental shipments since September to date reaching about 175,000 bales, against about 85,000 bales last year. The Bombay movement indicates that the shipments since October 1 to January 1 will show an increase this season of about 40,000 bales over the total for the same period last season. With regard to consumption, the probabilities are not clearly marked. Our own manufacturers certainly show no disposition to reduce their time. The stock of goods are very light, while prices have advanced considerably during the month, and the indications of a healthy, active trade for the spring are becoming extremely promising. The European consumption, however, is more uncertain. Private cable advices to-day claim that the mills will soon be, and are in fact now being put on half time. We should place more confidence in these rumors if something to the same effect had not been sent to this side before during the month. Besides, the foreign goods movement of Great Britain has been in no amount very favorable. The Board of Trade returns for October, just issued, and given in our London correspondent's letter, published to-day, show a continued increase in the exports of cotton goods. Still there is a point at which the high price of cotton will check the European consumption. Liverpool circulars received this week all claim it is now reached, and strongly advise the immediate, further and decided reduction of time at the mills. It is to be hoped that the raw material will not reach such a price as to make this resort necessary. It is the key to the position, and, if adopted for even a few weeks, could not fail to affect our market very unfavorably. But, on the other hand, with a living price for the raw material to the manufacturer, it is pretty clear that the total world's supply of cotton this year will be needed.—*Financial Chronicle.*

Halifax Market.

BREADSTUFFS.—Dec. 15, 1868.—We have no change to note in flour market. Receipts this week 5,254 bbls. Canada No. 1 ranges from $6.2[illegible] to $6.40; strong bakers $6.65 to $6.70; extra Canada $7.50 to $8; extra State still continue dull at $6 to $6.40, according to quality. No. 1 in good demand at $5 to $5.50. Cornmeal—Kiln dried scarce at $4.75; fresh ground, sound, none unsound $4.15 to $4.25. Rye flour $5.25 to 5.5[illegible] Oatmeal $8. Imports from December 8 to 15t[illegible] 1867 and 1868:

	Brls. Flour.	Brls. Cornme[illegible]
1868.	181,890	48,294
1867.	186,507	35,125

WEST INDIA PRODUCE.—Molasses in small stock though no quotable advance in pri[illegible] Sugars dull except Vacuum Pan, which continu[illegible] to be in good demand at 9¼c duty paid, with stock in first hands. We quote: Porto Rico to 6⅞c., Barbadoes 5⅞ to 5¾c., Cuba 5¼ to 5⅝ Centrifugal Cuba 6c., in bond. Rum very scarce at quotations; 75c for Demerara and 65c for Jago.—*R. C. Hamilton & Co.'s Circular.*

Petroleum.

The following were the exports of Petroleum from the United States, from January 1st to D[illegible] 2nd:—

FROM	1868.	186[illegible]
New York.....galls.	51,072,351	32,049,[illegible]
Boston	2,320,486	2,163,[illegible]
Philadelphia.....	30,710,012	27,672[illegible]
Baltimore	2,583,021	1,315,[illegible]
Portland...	704,997	
Cleveland	270,000	.....
Total gallons.....	91,660,777	63,201[illegible]
Same time in 1866		62,671[illegible]
Same time in 1865		26,192[illegible]

Reduction in Charges for Telegraphing.

The following are examples of the extent which reductions have been made in the [illegible] charged by the Montreal Telegraph Company:

	FORMER TARIFF.	RE[illegible]
Montreal to Father Point and Cacouna.....	50c & 4c	
" Portland.....	50c " 4c	
" Whitehall..... ...	50c " 5c	
" Pembroke and Perth..	35c " 3c	25
" Picton and Peterboro'.....	40c " 4c	
" Hamilton	40c " 4c	
" St. Catharines & London	50c & 5c	4[illegible]
" Buffalo..... ...	65c " 6c	
" Port Colborne....	70c " 7c	
" Chatham...	70c & 7c	5[illegible]
" Detroit.....	75c " 7c	
From Sackville to Detroit.....	$1.50 " 14c..	7.

Arrangements have also been made wit[illegible] Western Union Company, by which the t[illegible] tariffs of the Companies have been reduced [illegible] following points:—

From Montreal to Boston	$0 60c.	[illegible]
" " New York	0 75c .	
" " Chicago.....	1 50c...	
" " St. John, N. B.	1 00c...	7
" " Halifax, N.S...	1 05c...	[illegible]

And from other places in nearly like propo[illegible]

British Wheat Trade.

The wheat trade during the week has been characterized by much inactivity, and there is [illegible] probability that a series of dull markets will [illegible] until at least the turn of the year. An abundant crop, and importations which are very large [illegible] sidering the heavy fall which has taken p[illegible] prices during the last few months, will c[illegible] to induce the miller to purchase only from [illegible] to-mouth. As our importations are larg[illegible]

uld have been expected, any hope of a permanent improvement must, for the present, be dissed. Winter wheats are already in the blade, t a few weeks of frost would perhaps be desirae in order to prevent them from becoming, in ricultural parlance, "too proud."

The following return shows the imports into the ited Kingdom in November, and during the ven months ending November 30:

Imports in November.

	1866.	1867.	1868.
heat, ...cwt.	1,995,106	3,903,760	2,888,544

dian corn ...	786,876	282,194	956,547
our.....	402,897	389,426	273,116

Imports in Eleven Months.

heat.....20,547,038	30,877,923	30,303,752
rley.....	7,053,423	5,315,127	6,397,883
ts.....	8,017,291	8,678,021	7,602,915
as...	1,008,957	1,281,946	874,802
eans.....	1,017,534	1,856,585	2,446,981
dian corn...13,936,499	8,087,252	10,528,478
our.....	4,403,133	3,040,350	2,698,725

The returns for the ten months show that during at period the imports were somewhat in excess the corresponding period in 1867, but not to y important extent. The receipts from Russia w a reduction of 3,250,000 cwt.; from Prussia 1,480,000 cwt.; from Chili, of 530,000 cwt.; t, on the other hand, they have increased from e United States to the extent of 2,730,000 cwt.; m Egypt 2,150,000 cwt.; and from the Danian Principalities to the extent of 1,693,250 t. As regards flour, the October importation ows an increase of about 110,000 cwt.; but in e ten months there is a diminution of 165,000 t.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS.

Assets, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

Surplus Assets, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

Its Dividends—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

Its Success Unparalleled—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

Its Responsibility—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

Its Liberality—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

Medical Referees—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

PROSPECTUS.

THE DOMINION TELEGRAPH COMPANY has been organized under the act respecting Telegraph Companies, chapter 67, of the consolidated Statutes of Canada. Its object is to cover the Dominion of Canada with a complete net-work of Telegraph lines.

The Capital Stock

Is $500,000, divided into 10,000 shares of $50 each, 5 per cent to be paid at the time of subscribing, the balance to be paid by instalments, not exceeding 10 per cent per month—said instalments to be called in by the Directors as the works progress. The liability of a subscriber is limited to the amount of his subscription.

The Business Affairs of the Company.

Are under the management of a Board of Directors, annually elected by the Shareholders, in conformity with the Charter and By-Laws of the Company.

The Directors are of opinion that it would be to the interest of the Stockholders generally to obtain subscriptions from all quarters of Canada, and with this view they propose to divide the Stock amongst the different towns and cities throughout the Dominion, in allotments suited to the population and business occupations of the different localities, and the interest which they may be supposed to take in such an enterprise.

Contracts of Connections.

A contract, granting permanent connection and extraordinary advantages, has already been executed between this Company and the Atlantic and Pacific Company, of New York; thus, at the very commencement, as the Lines of this Company are constructed from the Suspension Bridge, at Niagara (the point of connection) to any point in the Dominion, all the chief cities and places in the States, touched by the Lines of the Atlantic and Pacific Telegraph Company, are brought in immediate connection therewith. A permanent connection has also been secured with the great Western Telegraph Company, of Chicago, whereby this Company will be brought into close connection with the Lake Ports and other places through the North Western States, and through to California.

Life Association of Scotland.

INVESTED FUNDS

UPWARDS OF £1,000,000 STERLING.

THIS Institution differs from other Life Offices, in that the

BONUSES FROM PROFITS

Are applied on a special system for the Policy-holder's

PERSONAL BENEFIT AND ENJOYMENT DURING HIS OWN LIFETIME,

WITH THE OPTION OF

LARGE BONUS ADDITIONS TO THE SUM ASSURED.

The Policy-holder thus obtains

A LARGE REDUCTION OF PRESENT OUTLAY

OR

A PROVISION FOR OLD AGE OF A MOST IMPORTANT AMOUNT IN ONE CASH PAYMENT, OR A LIFE ANNUITY,

Without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains in fact for Policy-holder's heirs, or other purposes.

PROSPECTUS

OF THE

OMINION EXPRESS COMPANY OF CANADA

ORGANIZED UNDER THE JOINT STOCK COMPANIES' ACTS.

CAPITAL STOCK, - - - - - - $1,000,000,

In 10,000 Shares, $100 each.

is proposed to organize a DOMINION EXPRESS COMPANY, to meet the present and prospective demand for inercased facilities of general transportation. It is the interest of Canadians to do their own work, and *accumulate* cash capital, and *one* of the objects of this scheme is the retention in his country of the profits arising from the business done.

Express Companies obtain "four-fifths" of their business from merchants and bankers, and no reason exists why they cannot transport their own goods, by their *own Agents, economically* and *efficiently*, and by a *union of capital* and *effort*, they hereby resolve so to do. Being thus united, and pledging to it their business and influence, secures to this Company certain and complete success.

This organization, like the mail system, is to extend, under *one general management*, to all cities, towns and villages in the Dominion, and to connect all parts of the United States, and being but "one Company," will secure *unity, despatch* and *accuracy*.

It is proposed to distribute the stock widely, throughout the Dominion, in limited sums, apportioned as nearly as practicable to the business of the subscribers. The capital Stock of the Company to be not less than $1,000,000, in 10,000 shares of $100 each.

Ten per cent. of the stock subscribed will be required to be paid after the subscription shall have reached the sum of $250,000, and after a Charter have been obtained, of which due notice will be given to the subscribers ; the subsequent calls, not exceeding *ten per cent. at any one time*, to be at convenient intervals, as the demands on the Company may require. But the aggregate of all calls to be made will, it is believed, not exceed *ty per cent.* of the Capital Stock.

The business to be done strictly on *cash principles*. With a paying business assured from the start, by *interested* and *reliable* Stockholders, it will be seen that a small per centage *only* of the subscriptions will be required to put the Company in working order, and it is confidently and reasonably relied that the receipts will thereafter maintain and extend it. And in order to secure an equitable voice in its management, the principal commercial cities will be represented at the Board, by Directors recommended by Stockholders of their own localities, who will also recommend to the Direction Local Agents, and thus secure a general influence in its management, as well as its business.

All Express enterprises, both in this country and the United States, have been decidedly successful, resulting from the profits of the business itself; having an organization and a share list—such as are now proposed—with energy and economy in the direction, no doubt can be entertained of the satisfactory results.

With such prospects, the Merchants of the Dominion, Capitalists and others interested in the success of this enterprise, are invited to become holders.

The following shall be included in the By-Laws to be hereafter framed for the Government of the Company:

. The Company shall be known by the name or title of "THE DOMINION EXPRESS COMPANY OF CANADA."

. The Capital Stock of the Company shall be *One Million of Dollars*, divided into *Ten Thousand Shares of One Hundred Dollars each.*

. Each Shareholder shall be liable only for the amount of Stock subscribed by him, her, or them.

. The Shares of Stock of the Company shall be transferable; but no transfer shall be valid without the consent of the Directors, in writing, unless shares shall be paid up in full.

. It shall be lawful for the Stockholders, so soon as the sum of two hundred and fifty thousand dollars shall have been subscribed, to call a General meeting of the subscribers, to be held at the office of the Company, in the City of Montreal, and proceed to elect nine qualified persons to be Directors of the Company, each of whom to be a proprietor of not less than ten Shares of Stock of the said Company, and three of whom shall form a quorum, and all the powers of the Directors. The said Directors shall also, at their first General Meeting, elect a President, Secretary, Treasurer, and General Superintendent or Managing Director, from amongst themselves.

The said Directors so elected shall proceed, without delay, to frame all necessary By-laws to govern the Company, and shall have power to alter and amend the same as circumstances may require.

The Directors shall not have power either to *sell out* the said Company to any other Express Company or organization now in existence, or hereafter to be incorporated, or to amalgamate with any other Express Company.

No Stockholder shall be at liberty to hold in his, her, or their name, more than one hundred shares of the Capital Stock of the said Company, without the consent of the Directors, in writing, first having been obtained.

Mines.

THE MADOC GOLD REGIONS.

From our own Correspondent.

BELLEVILLE, Dec. 31, 1867.

The weather of the present winter has so far been very favorable for the prosecution of miners' work. The unusual mildness of the temperature, and the comparative absence of snow, have hitherto allowed the prospectors to pursue their investigations almost without interruption, and most of the persons so engaged have been working with redoubled energy, so as to make the most of the time when they had the field to themselves, and so to anticipate the rush of would-be discoverers, whom they expect to swarm into our now well established mineral region in the spring.

Nor have their exertions been altogether without reward. Several additional deposits have been found, and the ores assayed, and if they yield in the gross anything like the amounts found in the assays made in the small quantities, (rarely exceeding five pounds) in which they are generally manipulated, the expectations of the most sanguine among our mining population will be fully realized.

The mine discovered by Mr. Powell, in the township of Marmora, is likely to turn out of great importance, as other specimens of equal richness to those first exhibited by him have been found.

As the nature of the country, and the lay of the gold-bearing ridges begin to be better understood, those persons who are engaged in prospecting go to work more systematically and with a better likelihood of success in their still somewhat precarious occupation. A reef, leading from the Barry mine, has thus been traced across several lots to a place on No. 8, in the first concession of Elzevir, known as Smith's Falls, on Black Creek, where visible gold has been found in the rock, at a small depth below the surface.

The Wellington Mining Company, whose shaft is located on the west half of lot 18, in the 5th concession of Madoc, on the east half of which lot the Richardson mine is situated, have had a preliminary survey of a small lot of "quartz" made by Messrs. Scott & Co., which yielded gold at the rate of $146 per ton.

Another assay by the same firm of a portion of rock from a mine in the north-east corner of the township of Rawdou, gave $150 to the ton; which was confirmed by another assay from the same place, made by Mr. Smith, of Madoc, yielding $160 per ton.

I have already mentioned the Empire mine, in the village of Madoc, as one of our first-class mines. The owners have had two samples of their ore reduced by Messrs. Daniels & Co. The first of one ton returned $34.76 in gold. The second, of 14 tons, yielded at the rate of $21.40 per ton. This, I believe, is the largest sample of ore yet assayed at one operation, and cannot well to be regarded as a most satisfactory return. The rock was not selected with a view of getting a large yield, as the proprietors do not intend to "stock" the mine, but was taken at various depths from the surface downwards, so as to give them as correct a view as possible of the value of their property.

Something has also been done in the way of silver, though the many reported discoveries of rich deposits of silver ore have by no means been substantiated. One assay, however, by W. E. Morrison, of Toronto, has produced six ounces of silver from one ounce of quartz taken from lot 12, in the 5th Con. of Tudor, or at the rate of $489 37 per ton.

Many of those fallacious silver reports have unquestionably arisen from pure ignorance on the part of some of our "practical miners," who, being unacquainted with the discrimination of the metals, or the proper tests to which they should be subjected, unhesitatingly pronounced every white "button" they obtained by their inartificial smelting to be silver; whereas the said buttons were generally alloys of lead, antimony, bismuth, copper, &c. For instance, a person brought to me, on Saturday, three beautiful buttons, which he confidently believed to be "pure silver;" but on being tested they proved to be tin, of great purity. An assay is to be made of ten pounds of the rock from which they were taken, and as the proportion of ore gangue appears to be large, I hope to be able to announce in my next the discovery of a valuable mine of tin.

SILVER MINE IN NEW BRUNSWICK.—We are informed on what appears to be reliable authority, that the silver mine discovered in Prince Wm., is capable of producing silver ore to the value of $10,000 per day, and that the antimony extracted from the ore is sufficiently valuable to pay all the expenses of mining. We have been further told that Mr. Lawrence, the owner of the mine, has refused $200,000 for a single acre of this silvery soil. He owns, it is said, a thousand acres, thinks the mine inexhaustible, and supposes himself to be the richest man on this continent.—*Visitor, St. John.*

THE DELERY GOLD MINES.—It appears that the General Manager, Mr. Winchell, resigned his office on the first of last month, and that Professor Hind, well and favorably known in connection with our provincial scientific commissions, has received the appointment *ad interim*. Professor Hind's recent explorations in the No. 1 section of the company's territory have resulted in two important discoveries: the one being an extensive deposit of iron mineral, and the other some very rich veins of gold, bearing granite. The latter discovery is of the utmost importance, as rock in this condition is far richer in gold than that known as quartz. The experiments made already demonstrate exceeding richness, and a vast body of "the mass."

DUBUQUE LEAD MINES.—The amount of lead mineral raised from January 1st to Dec. 15, 1867, from the Dubuque Lead Mines, aggregates 4,000,000 pounds, equal to 50,000 pigs of lead, valued at $48 per 1,000 lbs, and the pig lead at $8:50 per cental.—*Exchange.*

Insurance.

SURRENDER VALUE OF LIFE POLICIES.—The *Amicable Mutual Life Assurance Society*, recently established in the three cities of London, Dublin and Glasgow, has adopted as a new feature a liberal table of surrender values, so that any person insuring under its whole life table can learn how much the company will allow him for his policy, providing he should at any period be compelled to abandon further payments. For example, a person aged twenty-five years who had paid a premium of £10, could, at the end of the year, resign his policy and receive back £3 6s. 8d., or one-third of this payment. At the end of ten years he could retire with £4 2s. 1d. for every £10 paid. or £41 0s. 10d. of the £100. This is the same in principle as the much cherished non forfeiture clause of this country, but upon a rather less liberal basis, for in the States, although on money is returned to the insured upon his withdrawal, upon payment of two premiums he is furnished with a life policy for the full amount, paid in premiums, less five per cent. interest, and no further premium is charged.—*Insurance Journal.*

FIRE RECORD. — Stratford, Dec. 24. The Stratford Woolen Mills; total loss estimated at $8,000; insurance $1,500.

Cornwallis, N. S., Dec. 10. Barn of David Ellsley; loss about $400.

Toronto, December 31. Beard's Foundry; loss heavy. Insured in Ætna, of Dublin, for $4,000; in the Lancashire for 2,000. Total $6,000.

DISASTERS ON THE LAKES IN 1867.—The Detroit papers published a list of the disasters which have occurred on the lakes during the past season of navigation. The list is very long, the total number of casualties far exceeding the number in any former year. Instances of vessels having grounded at various points where the expense of getting off has varied from ten to $50 and numbering ninety-four cases, those being secondary in importance have been omitted. With those recited they swell the grand total of disasters for the season of 1867 to 931. Seven propellers and thirty-three grain vessels have been lost, to which may be added thirty more which were engaged exclusively in the lumber trade. Fifteen vessels engaged in the grain traffic the past year have been condemned, and unless re-built, will have to fall back to the stave or lumber freighting.

The number of lives lost on the lakes and in ports during the season, is 182, being rather below the average fatality. By far the greater number of casualties in any one month, occurred in November, when 288 vessels of all classss met with disaster, The total tonnage lost is shown by the following recapitulation:

	Number.	Tonnage.
Steamers	3	450
Propellers	6	3,143
Tugs	6	565
Barks	9	4,121
Brigs	2	624
Schooners	25	11,196
Barges	1	462
Scows	7	509
Total	86	21,070

The following were the disasters for the last eight years:—Total number of disasters in 1860, 277; in 1861, 275; in 1862, 200; in 1863, 300; in 1864, 329; in 1865, 421; in 1866, 621; in 1867, 931.

NEW RATES IN FIRE INSURANCE.—The local Board of Underwriters has abandoned the rates established about ten months ago. It is said they have been but faithlessly adhered to, and this lack of integrity amongst its members has led to the dissolution of the combination. The magnitude of the prevailing losses by fire by no means justify the resumption of competing rates, and we trust that no company will attempt to transact business below renumerative premiums.—*Real Estate Journal.*

GREEK FIRE.—Which is regarded as one of the most terrible of incendiaries, because it is inextinguishable by water, is discovered to possess no such quality. Instead of its having rather an appetite for water, as stated by those who love the marvellous, it is found to succumb readily to that element, and is no more to be dreaded in that respect than a box of lucifer matches.

Financial.

RENEWALS.—The Directors of the Halifax Banks have come to the determination that from and after the 1st January to the 1st July, renewals of notes falling due shall not be for more than two-thirds of original, and from the 1st July to the 31st December one half shall be the minimum, and after that the system of renewing shall forever cease. This is likely to press hard on a good many persons at first, but it is a step in the right direction, as, if persevered in, it must eventually bring about the cash system of trade in all kinds of business.

NEW PUBLICATION. We have received an ably written pamphlet, by Mr. John McLean, on the subject of Free Trade and Protection. It is written in the interest of protection, and worthy of careful perusal.

BANK FAILURE.—The Farmers and Mechanics' Bank of Burlington, Vermont, having failed a short time since, all the effects have been disposed of and a final dividend declared to the stockholders, of $7·40 per share, or 20 per cent. One hundred and five per cent. having been previously divided, the stockholders have had their entire capital returned them and a surplus of a little over twenty-seven per cent. Cause of failure—heavy losses in 1854.

"THE CANADIAN MONETARY TIMES."—Dr. Kempson, of the CANADIAN MONETARY TIMES AND INSURANCE CHRONICLE, a well conducted and valuable paper, published in Toronto, is in town canvassing in the interest of that journal. Mr. Cochrane has been appointed agent for this city and neighborhood. The MONETARY TIMES is highly spoken of by the American as well as the Canadian press, and we are glad to learn that, so far, Dr. Kempson has been most successful in his canvass.—*Ottawa Times.*

Law Report.

CURIOUS MARINE INSURANCE CASE.—The case of Dabney *vs.* the New England Life Mutual Insurance Company, was an action of contract upon a policy of insurance on the bark Fredonia, issued to the plaintiff by the defendant, to recover a sum of money, as general average for a jettison of a part of a cargo of oranges thrown overboard from the Fredonia and belonging to the plaintiff. In December, 1865, the bark Fredonia landed at this port about three hundred emigrants, who were taken from the ship Gratitude, which the captain of the bark found in a sinking condition. In order to make room for the passengers and crew of the ship the captain was obliged to throw overboard a part of his cargo of fruit, or leave the passengers and crew of the Gratitude to go down with the ship. The action was brought in the Superior Civil Court of Mass., and judgment ordered for the plaintiff. Exceptions were taken by the defendant and the case was carried to the Supreme Court. The following are the grounds apon which the Court ordered judgment for the defendant:—"The facts show that the immediate motive and cause of the jettison were not to preserve or restore the navigability of the vessel insured, but to make room for and receive on board the passengers and crew of another vessel, which was in imminent danger of foundering at sea with all on board. The jettison cannot, therefore, be deemed to have been before sacrifice of a part of the cargo for the purpose of obtaining safety from a peril impending over the vessel insured and cargo and freight. There was not a general average loss entitling the owner of cargo to contribution."

CONTRACT MADE IN CHICAGO.—A contract for the sale of goods to the plaintiffs at a certain price, payable in Toronto, was made by the defendant at Chicago, through his agent there; the goods to be shipped by the G. T. R. from Toronto. No sold note was signed by the broker until after action brought for the non-delivery: but it was proved that the 17th section of the Statute of Frauds was not in force in Illinois. It was held by the Court that the contract being valid when it was made could be enforced here, though not in writing.—*Green v. Lewis,* 26 Q. B. Reports.

Official Notices.

Notice is given that the Montreal City Passenger Railway Company will apply to the Legislature of Quebec for an Act granting amendments to its charter.

Notice is given that application will be made to the Legislature of Quebec, for an amendment to the Act incorporating "The Sherbrooke Manufacturing Company," so as to admit of an early election of Directors, and for other purposes.

The annual general meeting of the Brockville and Ottawa Railway Company will be held at the "Campbell House," in Brockville, on Wednesday, the fifth of February next.

Application will be made to the Legislature of Quebec, for an Act to incorporate a company for the purpose of manufacturing boots, shoes and other goods.

Notice is given that application will be made to Parliament for an Act to amend the Act chaptered 106, 29th and 30th Victoria, intituled, an Act to incorporate the Ottawa City Passenger Railway Company.

Notice is given that application will be made to the Lieutenant Governor of Ontario for a charter of incorporation, by the following persons, viz.: Alpheus Field Wood, of Madoc, merchant; Richard Sparling, of Madoc, miner; Thomas Scram McGlashan, of Madoc, miner; Mahlon Burwell McGregor, of Madoc, liverykeeper; Thomas Alexander Mitchell, of Madoc, miner, all in the county of Hastings; Joseph Vickers, of Toronto, agent; James Edwin Ellis, of Toronto, jeweller. The head office of the company is to be at the village of Madoc, and the operations of the company are to be carried on in the township of Madoc, in the county of Hastings, in the Province of Ontario, and elsewhere in Canada. The capital stock of the company is $72,000. The number of shares is 2,400, and the value of each is $30. The amount of stock paid in is $47,310, which has been invested in mining lots numbers 61, 62, 63, and 64, and number 1 in the 5th concession of the township of Madoc, designated Eldorado.

Notice is given that application will be made by petition to the Governor General in Council for a Charter of Incorporation by letters patent, by William Dow, gentleman, Benjamin Hutchins, merchant, William Wallace Stuart, merchant, Alexander Wallace, merchant, and James Moir, merchant, all of the city of Montreal. The proposed corporate name of the company is "The Anglo-Saxon Gold Mining Company." The head office of the company is to be at Montreal, and the operations of the company are to be carried on in the township of Madoc. The nominal capital of the company is $125,000 currency. The number of shares is 25,000, and the value of each share is $5 currency. The amount of stock subscribed is $100,000 currency.

— Shipbuilding on the Merrimack is almost given up at present, two ships and two schooners being all the vessels now on the stocks. Cause: protective tariff.

FISHING LICENCES.—From a return made of the fishing licenses issued, the following is gleaned:—Issued from Nova Scotia ports, 1867—341 vessels at 50 cents per ton, $9,368; 1867—277 vessels, at $1 per ton, $15; Canada, on schooner "La Canadienne," 1; 10 vessels 50 cents per ton, $296. New Brunswick, 1866—1 vessel at 50 cents per ton, Total, $23,109 50.

ADVANCE ON BEER.—The Toronto brewers advanced the price of beer, ale, and porter five cents per gallon, on the 20th inst.

MONTREAL OCEAN STEAMSHIP COMPANY.—Ve notice that the Montreal Ocean Steamship ompany is building two new vessels of 3,000 ons each, to be respectively called the "Euro- ean" and "Abyssinian." It may not be enerally known, but it is nevertheless a fact, hat the Messrs. Allans are now the largest teamship owners on the continent. Their iverpool line may now be said to comprise 11 essels, of a total of 27,168 tons, and their Glas- ow line 4 vessels, of 5,757, or together 15 plendid full powered iron screw steamers, of an ggregate of 32,925 tons. No other company n this side of the Atlantic can show such a rge and fine fleet, for it may be said to be rincipally owned in this city. There is ano- her fact in this connection which we would raw attention to. These 3,000 ton vessels re intended to come up to Montreal. Ship wners abroad may therefore form some idea of ur harbour and the channel which leads up to —*Montreal Gazette.*

GRAIN TRADE OF BUFFALO.—The receipts f grain at Buffalo for the last 18 years are hown by the following figures :

Years	Grain, bu.	Years	Grain, bu.
1849	11,986,690	1858	23,686,374
1850	11,585,649	1859	18,049,798
1851	16,762,613	1860	41,722,100
1852	18,583,875	1861	62,275,951
1853	19,316,019	1862	74,811,877
1854	23,796,038	1863	66,713,000
1855	21,613,904	1864	47,683,270
1856	30,793,225	1865	51,400,100
1857	16,142,310	1866	51,670,100
		1877	36,798,300

In 1866 the receipts are only to December h ; in 1867 the receipts are only to Novem- r 30th.

FAILURE.—John C. Fox, the piano-forte akers of Kingston, have failed for $66,000.

Phœnix Mutual Life Insurance Co.

HARTFORD, CONN.

Accumulated Fund, $2,000,000, *Income,* $1,000,000

THIS Company, established in 1851, is one of the most reliable Companies doing business in the country, and has been steadily prospering. The *Massachusetts Insurance Reports* show that in nearly all important matters it is superior to the general average of Companies. It offers to intending assurers the following reasons, amongst others, for preferring it to other companies :

It is purely Mutual. It allows the Insured to travel and reside in any portion of the United States and Europe. It throws out almost all restriction on occupation from its Policies. It will, if desired, take a note for part of the Premium, thus combining all the advantages of a note and all cash company. Its Dividends are declared annually, and applied in reduction of Premium. Its Divideuds are in every case on Premiums paid. The Dividends of the PHŒNIX have averaged fifty per cent. yearly. In the settlemeut of Policies, a Dividend will be allowed for each year the policy has been in force. The number of Dividends will always equal the outstanding Notes. It pays its losses promptly—during its existence never having contested a claim. It issues Policies for the benefit of Married Women beyond the reach of their husbaud's creditors. Creditors may also insure the lives of Debtors. Its Policies are all *Non-forfeiting,* as it always allows the assured to surrender his Policy, should he desire, the Company giving a paid-up Policy therefor. This important feature will commend itself to all. The inducements now offered by the PHŒNIX are better and more liberal than those of any other Company. Its rate of Mortality is exceedingly low, and under the average.

Parties contemplating *Life Insurance* will find it to their interest to call and examine our system. Policies issued payable either in *Gold* or American currency.

Montreal Board of Referees :—Hon. Geo. E. Cartier, Minister of Militia ; Wm. Workman, Esq., President City Bank ; Hon. J. O. Bureau, M.C.S. ; E. Hudon, Fils & Co. ; John Torrance, Esq., Merchant ; James Ferrier, Jr., Esq., Merchant ; Edward Carter, Esq., Q.C., M.L.A. ; C. D. Proctor, Esq., Merchant.

Examining Physicians:—J. Emery Coderre, M.D.; Professor of Materia Medica, &c., &c., of the School of Medicine and Surgery, Montreal, and of the Faculty of Medicine of the University of Victoria College ; William Wood Squire, A. M., M. D., Graduate of McGill College ; Francis W. Campbell, M.D., L.R.C.P., London.

For a sufficient test of merit we beg to state since the commencement of this old and reliable company in Canada, we have had the pleasure of insuring members of Parliament, some of the leading legal talent, and amongst numerous others, several of the leading merchants in this city.

This Company was the Pioneer Company of the non-forfeiture principle, and still takes the lead for every Policy it issues is non-forfeitable after one payment. The Company is now erecting a new stone building, five stories in height, at the cost of $100,000, similar to the Molson's Bank of this city, but of much larger capacity, having 75 feet front, and 116 feet depth, containing three Banks, some Express Offices, and the Post-Office, yielding about $8000 income, annually, all of which is the accumulating property of every Policy-holder.

The Company has issued nearly 2,000 Policies since the 1st January, 1867, which is the largest number, in comparison to the expenses, of any Company in Europe or America.

Such are the Results of the Cash System.

Full particulars, history of the Company, Rates, &c., can be obtained at the Managing Office for the Canadas.

Extract of Hemlock Bark—Extract of Oak Bark.

Important to Tanners, Merchants, Machinists, Lumbermen and Capitalists seeking for a Remunerative and Profitable Investment in Canada.

THE IRVING BARK EXTRACT COMPANY OF BOSTON have succeeded in perfecting a Machine for obtaining by compression from ungrouud *Bark*, all the astringent and Tanning properties of Hemlock and Oak *Bark*.

By the operation of this Machine, which can be taken into the forests of Canada, on the spot where the *Bark* is peeled, the actual *Tanning* principle of the *Bark* is extracted by compression, and is produced in so concentrated and so small a bulk, that it can be conveyed to market, ready for use, at a mere fractional part of the expense required to freight the crude *Bark;* 40 galls. of this *Extract*, weighing 400 lbs., can be obtained from one cord of first quality of Hemlock *Bark*, and this is worth for home use or for exportation $20 per barrel.

We are now ready to grant licenses or to receive orders for these Machines.

THURSDAY, JAN. 2, 1868.

WESTERN ASSURANCE COMPANY.

The annual meeting of the shareholders of this company was held at their offices in this city, on the 27th inst. From a statement submitted by the Directors, it appears that the total premiums received during the year amounted to $171,960.56. After providing for losses adjusted and unadjusted, footing up to $81,489 on fire and $17,739 on marine risks, or a total of $99,228, a balance of $36,017.75 is carried to the credit of profit and loss account. A dividend at the rate of 8 per cent per cent per annum was declared on the half year, absorbing the sum of $2,395. The report is considered satisfactory.

THE GRAND TRUNK RAILWAY.

We have noticed at various times in *Herepath's Railway Journal*, articles respecting the treatment the Grand Trunk Company received from Canada, whose tenor is very unfair to us. Little credit is given for what we have done, and our motives are misconstrued. We are all willing to admit that the road has been and is of the greatest service to our country, and we all regret that owing to a variety of circumstances it has not been profitable as an investment. But we do not use the language that our influential contemporary puts into our mouths, nor are we so avaricious as we are represented to be. If those Englishmen who put their money into the enterprise have suffered and lost, we, Canadians, have suffered and lost likewise. But if all that we have done has been forgotten, we take the liberty of recalling a few suggestive facts.

When the prospectus of the Grand Trunk Company was issued, the sum advanced and to be advanced by the Province was fixed by legislative enactment at £2,211,500 sterling in Provincial debentures, secured by the first hypothec on these particular works to which the guarantee was supplied. These constituted the inducements as far as the Canadian Government was concerned, held out in the prospectus to capitalists to invest. In 1854, by the Grand Trunk Act, the Government lien was declared to apply to the whole railway and its work.

In May, 1855, additional aid was granted by loan of £900,000 sterling, pursuant to Act of Parliament. This was made a first charge, payable in twenty years with interest. In July, 1856, the Province surrendered its first hypothec on the road, to the extent of £2,000,000 sterling. In 1857 additional relief was afforded by granting an extension of one year of time to complete the Company's works. In 1858 the issue of additional preferential bonds was allowed. The Government itself came to the assistance of the Company, by making loans and advances through the Bank of Upper Canada and thereby enabled the Company to tide over its financial difficulties. In 1862, power was given to issue equipment mortgage bonds, a first charge on the road, to the extent of £500,000.

Although the responsibility of the Province on behalf of the Company at the outset was £2,211,500 sterling, yet additional loans to the amount of £900,000 stg. was granted. The first hypothec of the Province was diminished by the issue of two millions of preferential bonds. An additional liability was incurred by the Government of meeting the obligations of the Company for interest for a period of five years, in respect of the whole £3,111,500, accepting in repayment of this further advance, an equal amount of stock in the share capital of the Company. Afterwards the Province gave up all claim to interest from the Company until its earnings would be sufficient to pay all interest, with a dividend of six per cent to shareholders. Subsequently, as we have seen, the Company was empowered to issue an additional debt of half a million, with the privilege of priority of repayment over any of the obligations of the Company.

Now, what proportion of the amount invested or lost do we Canadians bear?

Provincial bonds	$15,142,633
Municipal bonds	1,500,000
Stock held privately	250,000
Local loans	1,000,000
Interest to December, 1862	6,368,947
Interest from 1862 to 1867, say	5,500,000
	$29,761,580

It cannot be said with justice that our Legislature has not acted in a liberal spirit towards the Grand Trunk Company, from its inception to the present time; and considering the great expenditures rendered necessary by the opening up of the country and promoting its commercial interests, we are not ashamed of the amount we have put into the enterprise. The financial agents of this Province in London, great English contractors and their friends in Canada, have been the gainers. During the past seven years the company paid in cash out of its net earnings for dividends and interest the sum of $7,844,965; but we got none of the money. We have undertaken to build the Intercolonial Railway, which will directly benefit the Grand Trunk, and we are decided on the subject of further assistance to a Company which has taxed our resources heavily and will do so for years to come.

SUSPENSION.

A telegraphic despatch informs us of the failure of Browne, Gillespie & Co., wholesale grocers of Hamilton. Losses arising in connection with the failure of Havilland, Routh & Co., of Montreal, and unfortunate speculations in produce are assigned as the cause. It is hoped the firm may be enabled to resume business.

CAPT. TYLER'S REPORT.

Captain Tyler, who was sent out to examine and report upon the condition of the Grand Trunk Railway, has presented to the Board of that Company a voluminous and elaborate report. The editor of *Herepath's Journal* says with respect to it—

"We rise from a perusal of this honest and able report with the conviction that all our notions of the Grand Trunk are right—that it *is* a property, and, with good management, a little further assistance and those comparatively small completing works executed, it will be a very valuable property at a future time." Capt. Tyler refers to the competition to which the Grand Trunk system, comprising a total length of 1377 miles, is subjected; the employment of "agencies" which this competition rendered necessary, and the modification of rates by the competition against water navigation for six or seven months in the year. He finds that the maintenance and renewals of way and works averaged in 1866, 11½ per mile against £51 for railways in the United Kingdom.

He estimates that when the line is in good working order, 6½d will be enough, and under such circumstances a saving would be effected of £115,000 a year in the department of working expenses. He analyses the traffic thus:

Half-year ending Dec., 1862.		Miles.	30th June, 1867.	1866	31st Dec. 1865.	1866.
$			Dols	Dols	Dols.	Dols

The steel rail question is disposed of very summarily. Capt. Tyler states his conviction to be, that iron rails of appropriate form, good quality and sufficient hardness in the heads, may be made to last on most parts of the line for 15 years, and on the average of the railway for very much more. There are rails now in the track which have carried a heavy traffic for periods varying from 10 up to even 20 years. The real question to be solved is how to obtain suitable material from the manufacturers. He considers that the climate of Canada has been made to bear more than its share of blame for the failure of rails that would not have been durable in any climate. He states that the railway is better sleepered than many of the railways in England, but the road was not well ballasted originally, and that the original rails were not of good quality, and their joints were badly fastened by light chairs. From the use of peat fuel he expects a saving of £40,000 a year or more as the traffic increases. He deprecates the expense of laying down a third rail from Fort Erie to Sarnia, but recommends that the Detroit and Port Huron road should be made a broad gauge line. He insists upon the importance of constructing, with the least possible delay, the Intercolonial bridge at Buffalo. He doubts the prospects of the Great Western and Grand Trunk working harmoniously under the present agreement, and recommends a complete amalgamation. He considers that the Managing Director and officers of the Grand Trunk in Canada have been ably and honestly doing their best for the line.

He sums up the amounts which will require to be raised on capital account as follows:

(1.) Bridge over Niagara River at Buffalo, with connections on both sides of the river, to be commenced as soon as possible	£250,000
(2.) Expense consequent on, and incurred in, widening gauge on Detroit and Port Huron railway —to be carried out at once— broad gauge engines being supplied from other parts of the system	20,000
(3.) Additional steam ferry boat at Sarnia, with wharfage, berths, &c., to be ready on completion of the Buffalo bridge	25,000
(4.) 30 engines (including 25 now under construction), 10 passenger cars, 300 freight cars,—required in the course of next year	125,000
(5.) Buildings for engines,—much required,	15,000
(6.) Completion of ballasting,—say, in 2 years, if possible	60,000
(7.) Trimming, draining, and turfing slopes of cuttings	10,000
(8.) Improvements for three years in stations, sidings, extra weights of rails and fishplating	60,000
(9.) Completion of system of signals	6,000
(10.) Arrangements for changing trucks of cars at Buffalo and Detroit, to obviate inconvenience of break of gauge, and an expenditure of £175,000 for third rail between Sarnia and Fort Erie,—say	5.000
	£576,000

A further expenditure must be contemplated of:

30 engines, 10 passengers' cars, 300 freight cars, perhaps for 1868-9, but at all events to be ready before the Buffalo Bridge is completed	£125,000
Buildings for engines, by the same time	15,000
Further "improvement" in way and works	30,000
Further for cuttings	10,000
Permanent passengers' station, and extra freight accommodation at Toronto	5,000
General offices, freight, warehouse, and passenger station at Bonaventure street, Montreal	25,000
Altogether	£215,000

Of these last mentioned works the freight accommodation for extra traffic at Montreal and Toronto are the most pressing. The above two amounts form a total of £780,000; and it may be considered roughly that £500,000 of this sum would be spent for the Grand Trunk, and £286,000 for the purposes of the Buffalo and Lake Huron Railway. But inasmuch as greatly increased traffic, such as may be expected from the above developments, always requires increasing expenditure, and as the Intercolonial Railway may now be expected to be rapidly proceeded with, a further sum of £114,000 would be a moderate amount to be added for contingencies extending over the next six or eight years. And a total expenditure of £900,000 should therefore be anticipated, to do justice to the property, and to Canada.

THE CANADIAN GRAPHITE COMPANY.

From a Correspondent

Through the courtesy of the agent of the above named company I was enabled to gather some few items as to their mines and works, and the mineral products of the lands adjacent. I find that gold, iron, and plumbago have been found in Buckingham Township, in the County of Ottawa. The works and mines belonging to this company are situated about 30 miles from the Capital. The mines have been in operation only since last Spring. When the first shafts were sunk and veins of the metal tested, they were found to be rich in plumbago in a pure state, and in large masses or blocks. There is one piece which I examined in the office of the agent, of pure plumbago, which had been just brought from the mine; it weighed upwards of 250 pounds, and was about three feet long and one foot in diameter. The vein from which this piece was taken varied in width from 8 to 10 feet, gradually extending in width. As you descend the mine these veins of plumbago crop out on the ground for a length of 100 feet. On the same lot, and near to this lot, there are five other veins of plumbago, cropping out and giving equal promise. No shafts have as yet been sunk to work these veins. All these strata are situated upon ground elevated about 100 feet above the level of the ground adjacent; thus allowing every facility for drainage. All the above described are on the north half of lot No. 21, on the seventh range of Buckingham Township. Upon the south half of lot No. 20, on the eighth range, a vast bed of disseminated plumbago is found, 220 feet in width and 60 feet in depth. This bed runs right up the face of a mountain, and at present it is impossible to say what is its extent; but the ore is said to be rich, and to contain on an average from 20 to 30 per cent of pure plumbago. Average specimens of the ores obtained from these mines have been scientifically tested, both in England and Scotland, by chemical assayists, and the plumbago is pronounced equal to the best obtained from Ceylon for crucible purposes. Gold also is said to have been found in a creek on lot No. 19 in the eighth range; and traces of sulphuret of silver are found in close proximity to the plumbago veins above alluded to. Gold has also been found in the adjoining Township of Templeton. The ore has been assayed and tested by Dr. Girdwood, and been found to yield an average of $17 of gold and $2 of silver to the ton.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for the week ending Dec. 13, 1867:—

Passengers	$25,857 20
Freight and live stock	40,485 62
Mails and sundries	4,522 88
Total	70,865 70
Corresponding week, 1866,	47,011 13
Increase	23,854 57

NORTHERN RAILWAY.—Traffic receipts for the week ending Dec. 21, 1867:—

Passengers	$2,385 84
Freight	3,802 38
Mails and sundries	197 41
Total receipts for week	6,385 63
Corresponding week, 1866	5,446 55
Increase	939 08

EUROPEAN & N. AMERICAN RAILWAY.—The following were the traffic receipts for the month ended Nov. 30, of this and last year:—

	1867	1866
Passengers	$5,821 07	$5,602 47
Freight	8,903 46	8,430 03
Mails and Sundries	721 00	898 00
Totals	$15,465 53	$14,930 50

Increase, $535 03.

NEW ENGLAND INSURANCE GAZETTE.—We have received the last number of this excellent representative of insurance interests of New England, and we are sorry that our space will not allow us to borrow some of its reading matter. However, we take this opportunity of recording our sincere thanks to the editor for kindness and attention to our representative during his recent visit to Boston.

TONNAGE OF THE UNITED STATES.—The entire registered tonnage of the United States in the year ending with June, 1861, was 5,539,843 tons—last June 30th, it was only 3,868,615. The registered steam tonnage has increased from 162,608 tons to 175,520 tons, but there is a lamentable falling off in sailing vessels.

CULTIVATION OF GRAPES IN OHIO.—3,000 acres of grapes are under cultivation in Erie and Ottawa counties, Ohio, including the islands of Lake Erie, from which it is estimated that 200,000 gallons of wine were produced the past year. Growers have established a standard price at one mill per pound for each degree of specific gravity of must. The average production of grapes on the islands this year has been about one and a half tons per acre. The Kelly Island Wine Company purchased the grapes from about 225 acres, and have manufactured about 65,000 gallons of wine. Other parties have made at least 45,000 gallons, being a total of 100,000 gallons that is now stored on that island. Bass Island, it is estimated, had also in store 45,000 gallons in wine. Bass Island has sold more fruit for table purposes, in proportion to the ground in cultivation, than Kelley's Island. Additional attention is being given to the culture of new varieties of grapes. This is occasioned by a slight want of confidence in the Catawbas. Among those being most planted are Concords, Delawares Hartfords, Rogers, Ives. Norton's Virnia, &c.

DUTIES ON BREADSTUFFS.—The Halifax (N. S.) *Colonist* states that a petition is being very generally signed, praying the General Government to remit the duty on Corn, Cornmeal and Rye Flour, on the ground that these articles enter largely into the consumption of the Fishery class, which, owing to the failure of fish and land crops, are now reduced to a state of great distress.

The Legislature of Nova Scotia has been called together for the despatch of business on the 30th January.

Market Review.

TORONTO, January 2, 1868.

In our local market but a small business has been done during the week, owing to the presence of the holidays.

Grain.—Receipts of wheat continue moderate, but so soon as sleighing becomes general they must increase, as there is undoubtedly a fair amount of stock still left in the hands of farmers and dealers at the various points distributed throughout the country. Our market continues very firm, with a good demand for milling purposes. At present prices of flour the margin on grinding wheat, at the rates now paid for it, is unprofitably small, but a rise in the former article seems to be confidently anticipated. This was shown during the week by purchases for future delivery, at prices which would not be justified in the present state of the market. Fall wheat seems very scarce, and the few little lots that are put on the market are held at $1.70 to $1.75, with buyers at $1.65 for choice. The receipts of wheat, up to date, at this point, are much the same as last year; but at Montreal an increase of 1,884,220 bush. is shown by the returns. The total shipments by sea-going vessels from the latter port during season of navigation were 1,459,622 bushels. Barley is very scarce and dear, the supply at the principal points seeming to have been found quite inadequate. Quotations in this market are nominal at $1.05. Oats, firm, with a good local demand, and fair receipts at 52 to 53c. Peas, no wholesale movement; nominal at 72 to 74c. for small lots.

Flour.—Receipts light, shipments being generally made direct from the principal milling points on the Grand Trunk to Montreal and Portland. All the principal Canadian markets are firm, but leading American markets show a downward tendency. There is little demand for the higher grades, nearly the whole business done being restricted to No. 1 superfine and inferior kinds. For No. 1 the market is nominal at $6.75 to $6.80 for good brands; in Montreal, the same grade is quoted at $7.25 to $7.35. Extra nominal at $7.30 to $7.40.

Provisions.—The market for dressed hogs continues moderately active at $4.75 to $6.00, according to weight and quality. Among the receipts we notice a large preponderance of thin hogs, fit only for roll bacon; very few are fit for mess pork. Packers are putting down a good deal, and there is a free shipping movement to Montreal. In barrelled pork, no business is being done, and the inquiry is very limited. Mess is firm at $18. In cut meats and hog products generally, there is nothing doing to notice. The number of hogs packed at the places mentioned below, thus far this season, to the 18th inclusive, compared with last year, were as follows:—

	1867.	1866.
Cincinnati	248,129	179,436
Louisville	129,839	91,376
Detroit	14,667	3,615
St. Louis	150,500	38,000
Chicago	806,800	308,600

Butter is firm, and good to choice is scarce, buyers having scoured the country in vain for lots; inferior to medium is in fair supply, but there is no doubt of an immense falling off in the production, owing to the dryness of the season. Dairy packed has been sold in round lots, in one or two cases at 18c., holders now asking 19c.; store packed is held at 12 to 15c. cheese nominal at 8 to 9c.

Freights.—Tariff rates by Grand Trunk to the following points are: Flour to all stations from Belleville to Lynn, inclusive, 35c., grain for 100 lbs. 18c.; flour to Brockville and Cornwall, inclusive, 43c., grain 22c.; flour to Montreal 50c., grain 25c.; flour to Montreal 50c. grain 25c.; flour to all stations between Island Pond and Portland, inclusive, 85c., grain 43c. flour to Halifax $1 05c., grain 53c.; flour to St. John 95c.; Marine insurance, Portland to Halifax 1¼ on flour, and to St. John 1 per cent. Dressed hogs, Torronto to Montreal, $70 per car load of 20,000 lbs., in less quantities 40 per 200 lbs. Toronto to Liverpool, by Grand Trunk via Portland—boxed meats, per 100 lb 90c.; lard and butter $1; beef, per tierce, 15 6d. stg.; pork, per brl. 11s. 6d.; flour and oa meal 7s. Rates by Great Western—flour Suspensson Bridge 25c.; Suspension Bridge Boston 90c., American currency.

HALIFAX MARKET, DEC. 26.—*Business* has be quiet during the week, the weather being storm fish operations in consequence have been retard There has been some activity in Breadstuffs owi to the increased duty on Corn, Cornmeal, and R flour. The Imports are light; the Exports a about an average but fall far short of last wee especially to West Indies.

Breadstuffs.—Flour has advanced, owing to t lightness of importations, No. 1 Canada being n scarce, this quality has advanced and is wor $8 65 a 8 75, holders are firm, prices are likely keep up, as there is an upward tendency in Cana Extra Canada may be quoted $9 a 9 25; Ex State $8 40 a $8 50; Rye $7 a $7 25, and likel advance; Corn Meal in active request, $6 50 Kiln dried; Halifax ground nominal, the market bare at present; Oatmeal scarce and wanted, may be quoted $3 75 a $4 for Canadian. Impo for the week: From United States, 1284 bbls Flo 638 bbls Cornmeal, 205 bags Corn: From P. Island, 16 bbls Oatmeal.—*R. C. Hamilton & C Circular.*

Scottish Provincial Assurance Co.

Established 1825.

CAPITAL..... .....£1,000,000 STERLING.

INVESTED IN CANADA (1854).....$500,000.

Canada Head Office, Montreal.

LIFE DEPARTMENT.

CANADA BOARD OF DIRECTORS:

Hugh Taylor, Esq., Advocate,
Hon. Charles Wilson, M. L. C.
Wm. Sache, Esq., Banker,
Jackson Rae, Esq., Banker.
Wm. Fraser, Esq. M. D., Medical Adviser.

The special advantages to be derived from Insuring in this office are:—Strictly Moderate Rates of Premium; Large Bonus (intermediate bonus guaranteed;) Liberal Surrender Value, under policies relinquished by assured; and Extensive Limits of Residence and Travel. All business disposed of in Canada, without reference to parent office.

A. DAVIDSON PARKER,
Resident Secretary.

G. L. MADDISON,
15-1yr AGENT FOR TORONTO.

Portable Fire Extinguisher.

THE EXTINGUISHER
IS A SELF-ACTING
PORTABLE ENGINE,

Easily carried, and is filled with water charged with Carbonic Acid Gas, which, upon the turning of a stop-cock, is thrown with great force through a small hose to the distance of forty feet, and in cases of fire has been found most effective.

PRICE $20 TO $40.

The Extinguisher is strongly recommended as a safeguard against Fire by the Managers and Agents of the Insurance Companies.

These Machines have already been introduced into the Rossin House, the Factory of Jacques & Hay, and the Warehouse of Messrs. Walker & Sons, besides several private dwellings in Toronto.

W. ROWLAND & CO., *General Agents*,
34 King Street East, Toronto.

The Ætna Life Insurance Company.

AN attack, abounding with errors, having been made upon the Ætna Life Insurance Co. by the editor of the Montreal *Daily News:* and certain agents of British Companies being now engaged in handing around copies of the attack, thus seeking to damage the Company's standing,—I have pleasure in laying before the public the following certificate, bearing the signatures of the Presidents and Cashiers who happened to be in their Offices) of *every Bank in Hartford;* also that of the President and Secretary of the old Ætna Fire Insurance Company:—

"*To whom it may concern:*

"We, the undersigned, regard the Ætna Life Insurance Company, of this city, as one of the most successful and prosperous Insurance Companies in the States,—entirely reliable, responsible, and honourable in all its dealings, and most worthy of public confidence and patronage."

Lucius J. Hendee, President Ætna Fire Insurance Co., and late Treasurer of the State of Connecticut.
J. Goodnow, Secretary Ætna Fire Insurance Co.
C. H. Northum, President, and J. B. Powell, Cashier National Bank.
C. T. Hillyer, President Charter Oak National Bank.
E. D. Tiffany, President First National Bank.
G. T. Davis, President City National Bank.
F. S. Riley, Cashier, do. do. do.
John C. Tracy, President of Farmers' and Mechanics' National Bank.
M. W. Graves, Cashier Conn. River Banking Co.
H. A. Redfield, Cashier Phœnix National Bank.
O. G. Terry, President Ætna National Bank.
J. R. Redfield, Cashier National Exchange Bank.
John G. Root, Assistant Cashier American National Bank.
George F. Hills, Cashier State Bank of Hartford.
Jas. Potter, Cashier Hartford National Bank.

Hartford, Nov. 26, 1867.

Many of the above-mentioned parties are closely connected with other Life Insurance Companies, but all unhesitatingly commend our Company as "reliable, responsible, honorable in all its dealings, and most worthy of public confidence and patronage.

JOHN GARVIN,
General Agent, Toronto Street.
Toronto, Dec. 3. 1867. 16-1y

Briton Medical and General Life Association,

with which is united the
BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG.:
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

TORONTO AGENCY, 5 KING ST. WEST.

Insurance.

INSURANCE MATTERS IN NEW YORK.

(From Our Own Correspondent.)

NEW YORK, Jan. 4, 1869.

The year just passed into the "eras and the centuries," though not signalized by any great event, has not died without a sign. The Presidential election has permanently settled the political status of affairs with us, and determined the policy of the country for some years to come, while affairs abroad show that the democratic principle continues to work towards the surface, and that progress continues to be the law of human society.

Financially, the outlook is encouraging. Our bank statements promise an easy money market for the spring's business, which is expected to be active. The general dividends are large. For this point, $52,000,000 are distributed in January, including about $1,000,000 by our insurance companies, and $14,000,000 at Boston. Our railroad developement has been active—3,000 miles having been constructed in 1868. The general domestic trade and consumption have been largely stimulated by abundant crops, especially at the South. The import trade has not been excessive, nor particularly profitable, but it has been free from the disastrous losses of 1866-67.

This is the season of dividends and annual reports by the insurance offices. The New York Life offices have sixty days from January 1st to file returns, and statements by the Fire offices must be in by February 1st, proximo. The fire statements undergo many revisions at the Department; items in the "asset" and "liability" columns being frequently disallowed. It will, therefore, be some weeks before a general "synopsis" can be had.

It is the opinion of several experieneed underwriters with whom I have conversed, that the fire losses of 1868 will not equal those of 1867. True, there have been many large fires of late, such as those of Bangor and Lynn, but no great conflagrations, such as, by times, were experienced at St. Louis, Chicago and Portland. The losses, too, have been pretty generally distributed among the agencies, so that very few companies of any character are likely to be seriously crippled. Of 98 New York Companies, 20 passed their dividends in January, 1868, and 13 in July following. The dividends for January, 1869, will mostly be announced during the present week, and will, undoubtedly, show a general improvement over the results of 1867.

The everlasting and irrepressable brokerage question has again been revived. The desire to get rid of the brokers is manifestly strengthening and widening; but, on account of the "guerilla" operations of the agencies of out of town Companies, it is almost impossible to secure unanimity of action among the New York Companies. The National Board of Fire Underwriters is opposed to any rebate to customers. If the New York Board shall fail to sustain the views of the National Board, and allow such rebate, other cities, such as Boston, Hartford, Chicago, &c., will follow the example, the authority of the National Board will be overthrown, and, practically, the rebate will only amount to ten per cent. more commission out of the premiums and to the country agents. In two largely attended meetings, recently held, the New York Board have failed to come to any agreement on the question.

Superintendent Barnes's Report for 1869 is to contain a (first) valuation of the policies of all life companies reporting to him. It will be a great labor and his Report, "you bet," will not be out very early, as the time to which valuations are now made is the same in Massachusetts and New York (December 31). The public would have an excellent means of checking, by the two valuations, but for the unfortunate fact, that the New York Department is on the basis of 4½ per cent. interest, and the "American" table of expectation, while Commissioner Sanford, of Massachusetts, adheres to 4 per cent. interest and the "Combined Experience" table. Uniformity in these departments would be a great desideratum, and should be reached by adequate legislation.

You will have noticed that "out West," the English fashion of amalgamation has recently been introduced among the life companies. The Widows and Orphans of St. Louis has recently "gone over" to the Life Association of America, same city; but whether the transaction cost, $55,000, as in the recent affair between the British Mutual and the Prudential, this deponent saith not. Most likely not, as it seems the widows and orphans started with only $10,000 cash capital, six months before the "annexation." These consolidations cannot, however, become general in America. In the States having Departments, the law provides for the winding up of life companies, with insufficient assets on complaint of the Superintendent to the Att'y-General. And all States as they come to have any considerable number of respectable companies, must provide for Insurance Departments, since experience has shown that the business classes will not patronize companies that have not undergone official supervision. Companies like the North Western Life, of Milwaukee, come East for the purpose mainly of getting an official *vise*. This St. Louis occurrence is the beginning of a bad business. Not more than two or three of the dozen odd life companies in that city, are managed by men of experience, and the requisite actuarial skill. Of these companies several have only nominal note capitals, and very few enjoy a large public confidence. Their future is not doubtful. A few years of sickly existence and then—what? How can they hope to obtain a paying business. Two thirds of the fire and life business in the State of Missouri is done by the agency companies. They bring into the field the prestige of age, strength, and the success of experienced and skillful management, and hence command the business. The local cry about keeping premiums at home does not avail. A poor article of insurance will not be purchased or used when positive indemnity can be had at the same price.

We are beginning to see the effect of a too rapid multiplication of life companies. Forty-five have been organized in the past four years, which surpasses the worst speculative period of English experience. The waste of premiums attending the start of so many crude and unnecessary schemes for merely speculative purposes is monstrous and positively disgraceful. The business is thereby inflated. The losses, surrenders, and policies not taken, now amount to about 30 per

cent. of the annual business done. The effect of this must soon be to disgust a large portion of the community with the whole business. Too many persons, who never could continue policies, have been induced to take them under all sorts of plausible, if not positively deceitful, representations.

Many of the old companies do not expect that the life business for 1868 will aggregate as favorably as it did in 1867. The Presidential election is always a disturbing element, diverting men's minds from domestic affairs, and entailing extraordinary expenses. The occasional stringency in the money market for the past few months, and many failures have also had a bad influence. The mercantile classes as a body have not had a profitable year, and surplus funds for such purposes as life assurance have not been so abundant. Besides, the extravagant commissions paid by many young offices have compelled the older offices to extend their expense account, which will be likely to tell against the years' accumulations.

A few office transfers have recently occurred here in connection with the changes incidental to the New Year. Mr. Edward A. Lambert, ex-Mayor of Brooklyn, succeeds Mr. Coe Adams as President of the Craftsmen's Life; O. Del Mildgeberger, late of Security Fire, is the new Secretary of Fireman's Trust. The Corn Exchange, which has been in trouble for some time, gets an efficient officer in the new Secretary, Geo. W. Hoffman, who brings twenty year's experience to his post.

A new insurance monthly, *The Review*, is announced for January 15, to be conducted by Mr. Jas. R. Hosmer. It was also rumored that the Chicago *Spectator* was to be transferred to this city, but it is now understood that the project has been abandoned. New York has seven professedly insurance sheets of more or less merit, besides the score of other publications largely patronized by insurance companies. The companies complain that there are too many insurance publications, but they seem nevertheless to secure the desired patronage.

M. A. C.

Fire Record.—Almonte, Dec. 24.—The Roman Catholic Church was burned to the ground through a defective stovepipe. There was an insurance in the Beaver Mutual for $1,600.

Guelph, Jan. 1.—A fire this morning destroyed the bakery and warehouse of John Harris, Jr. Probable loss about $3,000; partially insured.

Pembroke, Dec. 24.—The tavern of Mrs. McCracken, widow of the late A. Pembroke, lumber merchant, took fire and was consumed. The origin of the fire is said to have been from the stovepipes. Very little of the furniture saved, and no insurance on either building or contents.

Ottawa, Jan. 1.—A fire was discovered in a building occupied by Dufour as a carriage shop, on Rideau street, which, with its contents, consisting of carriages, cutters, tools, and a large quantity of seasoned lumber, was entirely consumed. Dufour's loss will be heavy, as he had no insurance. The fire is supposed to have been the work of an incendiary.

Halifax, Dec. 12. An unoccupied dwelling house on the Northwest Arm Road, owned by H. Fredericks, carpenter, was destroyed by fire. The fire brigade were promptly on the ground, but were unable to save the building in consequence of the want of water in that vicinity.

St. Catharines, Jan. 3. J. Thomas, saloon, opposite the Custom House, was burned to the ground. Loss $1,000; no insurance. The Custom House caught fire, but was saved.

—The London fire has been settled by the insurance companies for $15,000 on the stock.

Montreal Fire Department.—Chief Bertram of the Fire Department, reports that for the year ending 31st December, 1868, he regrets there has been more fires than has ever occurred in Montreal in any previous year. The Department has been called out 222 times on the whole, or in part for 175 fires and 47 alarms. Five of the fires were beyond the city limits; but a portion of the Fire Police went out to them.

Insurance Deposits.—In our statement of the deposits made by the Insurance Companies given a fortnight ago, an error appeared in that of the Northern Assurance Company. Their deposit is as follows:—

Deposit in Cash	$85,834
" in Canada 5's	12,166
" in Canada 6's	2,000
Total	$100,000

Ætna Live Stock Co.—The Chicago *Spectator* contains the following:—It is due to the Ætna Live Stock Insurance company, to say that the later and more authentic information has satisfied us that there is no truth in the report that that company's affairs had been made the subject of a second official investigation by Superintendent Barnes. Our correspondent at Hartford informed us, soon after the failure of the Hartford Live Stock company, that Mr. Barnes, after a thorough investigation of the Ætna's affairs, had commended the "responsibility and management" of the latter company, and moreover had complimented its officers for "keeping their business so well in hand." That information was entirely correct,—in fact could not have been otherwise, considering the eminent character and undoubted responsibility of our correspondent. We made editorial mention of the fact at the time, and considered ourselves justified in warmly defending the Ætna from the damage of an unfounded and untimely suspicion which was certain to follow the failure of its predecessor and rival. Subsequently there appeared the report that something in the later experience and business of the Ætna had occurred to shake the confidence of Superintendent Barnes in the company's stability. We are now permitted to state that these reports were entirely unfounded; that no investigation of the company's affairs is making by Mr. Barnes; and that Mr. Barnes does not, at present, entertain any change of the opinion which he expressed in his last letter to the company, of which the following is a copy, duly certified:

Albany, N. Y., August 14, 1868.

J. B. Tower, Secretary Ætna Live Stock Insurance Co., Hartford, Conn.:

Sir,—Yours of the 12th inst. received, and also the special statement of your assets and exhibits as of August 1st, 1868.

The statement received is satisfactory, and the promptness with which it was made after request, is unprecedented in this department. I trust that your business will always be held so well in hand.

Very respectfully,

(Signed) Wm. Barnes, Superintendent.

Hartford, November 27, 1868.

Personally appeared H. T. Sperry and made oath that the above is a true copy of a letter received by J. B. Tower from Mr. Barnes. Mr. Sperry further states that he is familiar with the hand-writing of Mr. Barnes, and knows it to have been written by him.

(Certified) Justin Snow, Notary Public.

The above letter, and positive information that the sentiments therein expressed have not been changed since the letter was written, justifies fully the opinion which we published in September—that the Ætna Live Stock Insurance Company is fully entitled to public confidence. We are glad to know that the management of the company's affairs is conducted with skill and prudence.

LIFE COMPANIES AND THEIR AGE

It is now pretty generally admitted throu the broad field of life underwriting in this try, that that company which secures and the best agents is most successful. The tena of this position was, a few years ago, a subj debate. In many quarters, particularly a life officers, and also among general agent solicitors, it was thought that success was d dant on distinguishing characteristics of a pany,—some wonderful alchemy for conv premium receipts into fabulous dividends advantages of half note, or the merits of all or things of kindred ilk,—that these consti the savory bait for business, and that such s points were altogether irresistable to the h hordes seeking insurance. The agent of t cash system looked down from a towering nence on the growling solicitor for the half and wondered how he obtained his bread; the sleek official, beside his cozy grate, count the gross amount of the morning's applica and solaced himself with the thought, tha days of the note system were number And the agent of the note plan looked with pity on the all cash advocate, wondering men could be "so foolish as to pay double for insurance," convinced in his own mind were they to listen to his arguments, s system could not exist for a day, and a applications came pouring in each day a home office, the officers laughed in happy and said, Behold! this is the great Ba which we have builded. The officers of panies did attribute their success to the sup fact that their plans and practice were p able to the plans and practice of other comp In the year 1860 there came a gleam of The discovery was made by a young officer young company, that honesty and faith, no and cunningly devised plans, are the true pla for a life company to stand upon, and that s comes through heroic workers, and that by a in good faith with agents, paying them libe furnishing them every facility for accompli their arduous tasks, and protecting them in rights, any well organized company may How thoroughly that young officer understoo work let the grand successes of some young panies testify. Other men followed in his t not immediately, but as early as 1863; our ers can name companies readily whose suc have been wonderful, and in every instance successes are attributable to agents in the fie

Now, that the fight for business among th companies is so fierce, let them consider this ject of their duties to agents. It is all w talk about mutuality, and obligations to p holders; but it is equally well to cousid rights of agents. It is very natural as a com grows in power and influence, and its busines creases, for officers to assume undue auth become irrascible, grow dissatisfied with an an of work which would at another time have highly gratifying; in short, deal curtly and i riously with a man whom once they courted coveted. The fact that an agent may have a list of renewals at the mercy of the com which he represents, renders him more or less sitive. Then again, who are these old agen the field? They are the veterans, men who borne the burden and heat of the day, any o whom is worth a half dozen new recruits.

The point we desire to make is this: the panies cannot be too careful in establishing a tation for honorable and generous dealing agents. We are fast coming to a time when matter will assume a significance which it not now. Agents no longer stand aloof from other as they did a few years since, but the a of rival companies throughout the country eiate together and are intimate with each Any unwarrantable liberty on the part of a pany with an agent is regarded as a direct t at the rights of every other agent. Now we

o-operative manœuvering among agents, and e is a present no necessity for any movement his kind; but the companies may as well n, first as last, that they are in the hands of men who have made them, and they should ue always a peaceful and conciliatory spirit rever there exists difficulty; avoiding recourse aw whenever possible, and, indeed, we think re excused in saying it does not look well for company to advertise that it has never liti- a claim, when it is ready, on the slightest ocation, to take up the tomahawk against an t.—*Spectator.*

THE DANGER FROM WITHIN.

is believed by some that we have too many insurance companies in the country, and that business in which they are engaged is already lone. This impression is derived from a con- plation of the inherent feebleness of some com- ies, which never ought to have been organ- , and the hungry and fierce competition of rs, which bid too high for public patronage. enturies must, however, elapse before the full th of life insurance is attained. It has herto been retarded by prejudice, ignorance, superstition; but, although they will always e an obstacle to the advancement of this and y other liberal system of benificence, their op- tion has of late grown comparatively faint ineffective, and the progress of life insurance probably be henceforth more impeded by its essed, but false friends, than by its open nies. The latter are fast disappearing, and that life insurance has received the approval the benediction of the Pope himself, the lors of intolerance against the institution will silenced, and bigotry itself will be compelled to ct the ecclesiastical thunders against some r great scientific improvement.

is, therefore, from within, and not from with- that life insurance is threatened with serious ger and dissolution. The trouble from this rnal source is more to be dreaded than the s arising from every other cause, for it strikes the life of the institution, saps its foundation, weakens public confidence in its worth and ility.

very sound, honorable and skilfully managed company, confirms, increases and perpetuates prosperity of the land. In its operation, more than in its profession, it is the most tive advocate of its own doctrines. It is ched, not only by its own policy holders, but ll their friends and by the public. The re- ption of its promises to the insured is the best ding in its favor. No eloquence can surpass blessings of the widow and orphan. When are shielded by life insurance from want and ering, who can witness the timely relief it rds them without being converted to its doct- s? These doctrines teach economy, foresight providence. They inculcate the duties of the ent and the future, and more than fulfil the by performing, and even anticipating, the ates af genuine love and wisdom.

good life company makes good citizens. Its cy-holders, and their children, who benefit by institution, learn from its teachings the true ciple of government, that there is no certain ty unless all combine for the protection of each, that there is no oppression where all alike e one another's burdens. It makes good and erely respected husbands and fathers; good, ng and grateful wives, sons and daughters, good practical christians. It would, indeed, mpossible to enumerate the good a sound and conducted life insurance company actually s and helps to do, for its blessings, like the efits of solar light, penetrates and are reflected very direction.

Many insolvent life insurance corporations, how- existing where they are not compelled to re- their actual condition, are yet young and apparently flourishing and able to hide their rottenness from the world. But the day of reck- oning and exposure must eventually arrive to them all, sooner or later If it be long delayed, the results will prove only the more disastrous to the policy holders and injurious to life insurance. Every day's continuance of such hollow impositions multiplies the evils they will inflict. Every public journalist or private individual, cognizant of their unsoundness and ultimately inevitable failure, who shrinks from denouncing them tacitly, helps them to defraud our worthiest citizens, and to make beggars of their widows and orphans.

Here no compromise ought to be made. The public should be warned against every unreliable insurance company, no matter how plausible and imposing its claims, or how seductive the array of names that endorse its pretensions. We are blamed, abused, and threatened for exposing delusive life companies, new and old, British and American, but shall not suffer ourselves to be driven, either by slander or menaces, from the path of manifest duty.

No life insurance company has any claim to public confidence which does not annually make and publish a full, reliable, and exact exposition of its condition. A company may have essential reasons for not doing this, but they are such as should prevent the public from entrusting the management with its savings. We cannot accept less than an explicit statement of this description and ample security for the fulfilmeut of its pledges as a justification of tolerating the existence of any life company, and the time will come when none will be suffered to do business in America or Great Britain, whose policies, liabilities, reserves and assets are not annually valued by a government actuary, and pronounced by him to be correspondent and ample. Then we shall not have too many life companies, though they treble the existing number; for the perfect confidence of the public in life insurance will render its practice almost universal. We have a superfluity now, because many life companies which are not subjected to a searching government supervision, are irresponsible, reckless or insolvent. These hollow and consumptive organizations form at present the principal impediment to the growth and spread of life insuraunce, which will never prosper as it might and should do, till all of them are legally, thoroughly, and permanently extirpated. Let every one who can hasten the consummation so devoutly to be wished.—*Insurance Times.*

Mining.

MADOC GOLD DISTRICT.

(From our own Correspondent).

BELLEVILLE, Jan. 4, 1869.

The following is an abstract of the report of Mr. John H. Dunstan, Superintendent of the Richardson mine, Eldorado, Madoc, addressed to the President and Directors of the company, dated Dec. 30, 1868:

After congratulating the Board upon the favorable report which he has been able to make, Mr. Dunstan goes on to say: "On my appointment last May to the management of the Richardson Gold Mining Company's property, I examined the mill, and found it to be in so very unfit a state that I declined working it until partially refitted. On entering the mine I saw it had been worked without judgment, even the first principles of mining had been ignored; and that it would not be safe to work it until thoroughly timbered. On reporting this to the directors then in office, they concluded not to proceed with the work until after the general meeting of the shareholders. From the new Board of Directors I received instructions to get the mill put in working order and make a test of the ore, which was done in August; the ore treated being some left in the rock-house of the mill by the former manager. After seven tons had been crushed the Sheriff seized and closed the works. On cleaning up, the result showed $9 per ton. The works then remained closed until October, when I received orders to put men to work in search of other veins, and to find out more about the property. After working about two weeks, a very promising vein of auriferous rock, 2 feet wide, was discovered; although it does not show much gold, yet the indications are very favorable. On Nov. 17th I again started the mill on refuse rock, the cullings of all previous crushings, takiug the first from the outside of the shaft-house, of which I crushed 35 tons. I next commenced on the ore from the inside of the house, and crushed 175 tons, in all 210 tons, which yielded from $1.50 to $7 per ton, average $4 per ton. I then took a few tons from the mine, 20 to 25 feet from the surface, without sorting, and got a return of $7 per ton. The whole cost of crushing, including hauling, cordwood, &c., has been less than $1.50 per ton.

Mr. Dunstan then proceeds to show that these amounts per ton, though apparently small, are sufficient under a good system of mining to pay at least 100 per cent. upon the total cost of working, and adduces several statistical items, taken from the *American Journal of Mining*, Congressional Reports, and the record of some of the most successful mining enterprises, to prove that a much smaller tonnage return will, on a large scale of working, under efficient management, pay ample dividends on the capital invested, even where the rate of wages and the price of cordwood are much higher than in Madoc.

The report is accompanied by plans and sections, showing the extent and direction of the auriferous deposit, with its divarications and peculiarities so far as they have been developed, together with the adjacent stratified and massive rocks; and such additional works as in Mr. Dunstan's opinion will conduce to the more effective working of the mine.

Mr. Dunstan states the expenditure of the company up to the present time at $30,000, a large proportion of which has been unnecessarily expended through the incompetence of the persons to whom the management of the works has been entrusted, while the rich deposit of gold found in the first instauce, which ought to have repaid this expenditure and placed the company's affairs on a sound basis, has been totally lost to them for the want of an efficient supervision to restrain the pilfering propensities of their own employes and of the numerous visitors to the locality; for as the report avers, with truth, "nearly every city, town and village in Canada, and very many in the United States, contain specimens, showing gold from the Richardson mine."

"In conclusion," writes Mr. Dunstan, "allow me to state that although the present shareholders may fail to reap the benefit of their investments, there is no doubt that there are other parties willing to carry on the works, and give the mine a thorough test; and although we are not certain of anything in mining, yet in my opinion, every indication shows that the Richardson mine will, at some future period, be one of the best paying mines in the world."

I have only to add to the above, that I saw on Thursday last an ingot of gold, value about $320, the produce of the last crushing mentioned in Mr. Dunstan's report; and that I was shown this morning a specimen of gold-dust, worth, I should judge, about 50 cents, washed from a single pan of crevice matter taken from one of the newly discovered veins in the ninth concession of the township of Marmora.

LAKE SUPERIOR MINES.—The Superior (Wis.) *Gazette*, Dec, 12, gives an account of the progress and prospects of mining on the North Shore of Lake Superior. It says: "The Thunder Bay Mining Co., near Fort William, Lake Superior, Canada, are pushing ahead their mining operations with commendable energy, with a working force

of about forty men; they are working day and night sinking two shafts. Shaft A is down some seventy feet; shaft B, about sixty feet; commenced cross-cutting; both shafts look promising. A good show of silver-glance at present depth. With an experienced superintendent, lately from the silver mines of Norway, and a wealthy English Canadian Company to back him, we shall expect early next summer to hear of some big runs from their eight-stamp mill, which was gotten up and sent over last season from England. Early next spring they will complete the erection of this mill, and have out sufficient ore to keep it constantly crushing. We do not know what process they will adopt after crushing, but would suggest that they take a look at our 'Tindall process,' which will be in operation at Vermillion Lake by spring. The Crown-land Commissioners visited this section of Canada last fall, and after seeing for themselves the many difficulties and great expense attendant upon the opening of mining enterprises in a new country, promised for the future a much more liberal policy. We hope they now see the folly of their 'Gold and Silver Mining Act,' passed last winter at Toronto. Many scientific and experienced mining men visited this section last summer and were very favorably impressed. On Thunder Cape, and at the mouth of Pigeon River, on the Montreal Mining Company's lands, some very rich discoveries were made, the vein at Thunder Cape carrying native silver and silver glance very rich, together with cobalt, graphite and galena. For 'surface shows,' so far as developed, this section surpasses anything heretofore found in our western territories. Of course we allude only to silver lodes. With a branch of the Northern Pacific Railroad to the mouth of Pigeon River, an American enterprise untrammelled by any such restrictions as were imposed by the passage of the late act termed the 'Gold and Silver Mining Act' of Canada, we firmly believe that this region of country (to the north and northeast of Lake Superior) would soon be developed into another Montana, or even California. So far as regards rich mineral bearing lodes, during a residence of eight years in Colorado or Montana we have never seen in either so many or so rich surface indications. The Vermillion Lake Mineral veins are undoubtedly an extension almost due west, of those."

HARVEY HILL COPPER MINES.—The Quebec *News* says:—"We are happy to learn that the new and improved machinery in connection with the extensive works erected by Dr. Douglas at these mines, are approaching rapidly to completion. We are also pleased to know that the operations below ground, which have been suspended since the disastrous fire of last year, have been lately resumed, and that last week a very fine lode of purple ore was struck, the promises of which are very encouraging, and there is now every reason to believe that the promoter of this great enterprise is about to reap the reward which his untiring efforts, under so many discouragements and difficulties, so well deserve."

LEAD MINING.

A recent number of the London *Mining Journal*, under this head, says: "Of the public dividend lead mines in England and Wales, nearly one-half are situated in the Principality, while they yield considerably more than one-half of the aggregate amount paid in dividends. As an evidence of the progress of public estimation in favor of lead mines as an investment, it may be remarked that in 1862 there were 13 public lead mining companies, which divided during the year £70,590; but in 1867 the number had been increased to 18, which divided £127,280. The paid-up capital amounts to £468,073; the sum paid in dividends £1,263,587; and the current aggregate market value £1,372,657."

From the same authority we learn that the value of lead obtained in the United Kingdom in 1867 amounted to £1,337,509, while that of tin and copper, for which Britain has always been famous, amounted to only £799,203, and £831,761, respectively. The last number of the *Journal* (dated Dec. 12) says:—"Lead Mining in Wales is being profitably and extensively prosecuted, and, though unostentatiously, is imperceptibly filling up the gaps created by the falling off in our Cornish mines. Large fortunes have been and are being made, and losses the exception. The Principality bids fair to take the first place in lead, as it is now doing in coal. Fresh districts are being discovered, and good discoveries are being made in old and neglected fields. Flintshire, long celebrated for founding county families from its mineral wealth, is again manifesting signs of activity." Lead has been gradually rising in price for nearly a century, and now commands a higher rate than at any former time. In England it is selling at £20, and in New York at $130, gold, per ton.

These, says the *Kingston News*, are encouraging facts for the Frontenac Company, which have now above ground upwards of 5,000 tons of ore. It is expected that several times this amount will be stoped during the winter, and the extensive dressing and smelting works of the company will be put into operation as soon as the cold weather is over. The above amount of ore has all been obtained from mere exploratory work, namely, sinking and driving, which in ordinary mining is not expected to pay expenses. But counting it at only $8 a ton, which is *less than half* the average of the estimates of Professors Dawson, Hunt, and Chapman, and Messrs. Robb, McDonald and Plummer (mining engineers), the value of the ore thus far raised is over $40,000. We understand the company has now a large quantity of rich ground ready for stoping out. As soon as this process is commenced, the ore, owing to the great breadth of the vein (12 feet), will accumulate even many times more rapidly than hitherto.

COPPER MINING IN QUEBEC.

The Sherbrooke *Gazette* furnishes some information regarding the Hartford copper mine, which is being worked in the township of Ascot, about six miles from Sherbrooke. There are about 130 men employed at the works:

The ore at present is mined at a distance underground from the surface of about 370 feet, from whence it is drawn to the surface of the ground by a railway propelled by horsepower; there are several slopes or levels at different depths, where there are various parties at work—altogether there is an area of some 150 by 120 feet entirely blasted out, the rock being supported by pillars of stone and large posts of wood. The vein of copper is of unlimited extent and quantity so far as known. After the copper rock is brought to the surface it is carted to short disaances and piled up in piles from 30 to 60 feet in length by say 15 to 20 feet wide, and about 8 feet in the centre, gradually sloping to the bottom. In the sides and ends there are small places left where wood is placed, and this when ignited soon communicates to the sulphur, with which the rock is largely impregnated, when the whole mass is heated and fused together, the sulphur furnishing sufficient material to feed the fire when once set agoing till the whole pile is soon a mass of red hot material. This process, which is technically called "roasting," separates the sulphur from the rock and renders it for smelting.

There are several buildings near the mines, houses, store, office, blacksmith and carpenter shops, and a large building partly finished near the mouth of the shaft, in which it is intended to place superior machinery to that now in use, for raising the rock from the bottom of the mine to the susface. This will be in operation in about two weeks.

We next visited the smelting works, where there are four large furnaces erected for smelting the ore. Three of these were in full operatio and smelting about 50 tons of ore daily. The is a large steam engine used for blowing the fir and other purposes. The furnaces are conduct on a new principle introduced by General Adam The fuel, (of which it takes about one-eighth quantity to seven-eighths of ore,) and the ore thrown into the furnaces about twelve feet fro the bottom, the blasts being introduced in rear about four feet from the bottom. The furna are kept going day and night by relays of wor men, and the refuse when melted pours out in stream from every furnace and is carried off iron pots placed on wheels outside of the buildi In front of the furnaces there is a vessel simil to a large potash kettle, lined with "steep," co posed of coke, burnt alloy, charcoal, etc., i which the metals when passed fall—the ref rising to the top and running off over the side taken away. When the reservoir or kettle is f of the copper "matt" or "regulus," as it is call it is dipped out and laid aside, cooled, and ready for shipment. These furnaces have b in operation, some of them, since the 1st of J last, and have been, with the exception of S days, kept going night and day, a fact unp cedented in co per smelting operations. percentage of the rock in copper is about 5 cent., and when manufactured into "matt" i from 30 to 40 per cent. of pure copper. Th works were intended for use in connection w another mine owned by the same company wit half a mile of the works; but the present n being partially developed, and proving of g grade copper, has alone as yet been worked. estimated that there are 25,000 tons of co rock now in sight.

Should the price of copper rise, (it now b very low,) both mines belonging to the Hart Company will be worked.

There is another set of smelting works ere at a short distance from the "Hartford," in nection with the "Capel" mine, owned pr pally by parties in Montreal, called the N American Smelting Works, under the ma ment of Mr. Bennett, an experienced mi engineer, which we hope will prove highl munerative to the proprietors. We unders from General Adams that his mine is also well.

GOLD AT RAWDON.

A correspondent of the *Montreal Gazette*, wr respecting certain gold mines in the townsl Rawdon and Chertsey, and assays made b Girdwood, says:

In the townships of Rawdon and Chertsey on rocks taken from the lands of Mr. Be Cahill, by that gentleman's certificates, the 27th August last, it is found that some rock contain gold and silver to the ton as fo Gold, $29.12; silver, $3.79, which makes another specimen, dated 15th August, conta

Gold, 1 oz. 13 dwt. 1 gr., equal..	$32 1
Silver, 1 oz. 9 dwt. 3 gr. " ...	1 8
Equal to.....	$35 6

Other rock taken from the surface is fo contain from $7 to $13 per ton.

In your paper of the 7th inst. I see by tract from the *Belleville Intelligencer* the from the Hastings gold region from the Ri son mines, the proceeds of one weeks' cru which yielded over $7 per ton, from 25 rock; the expense of extracting the same per ton, leaving a net profit of $5 75 p Now, sir, if there is within the distance miles from Montreal, with all its acknow wealth, gold mines that yield four tim quantity of gold to the ton that the H mines do, with such easy access, why is su bounded wealth allowed to be unsought for?

lf tons of this rock are on their way to Philadelphia for a new process of analysis and others are to follow shortly, but capital is wanted to bring out the full result of this feature. The writer of this is not much instructed in the matter, but when I have seen the excitement heretofore that existed in going to the wilds of California, Australia, and to other mines in Canada, it is surprising that such great wealth should be allowed to lie dormant so near the greatest commercial city in the Dominion.

I read the letter of the Mayor of Montreal some months ago from the gold regions of Nova Scotia and the isolated localities of the crushing mills at work there, and the difficulty of access thereunto; he would no doubt, be pleased so know that greater facilities and richer mines exist within six hours drive of Montreal. Adding to this facility the numerous rivers and extensive water power which could be used for the crushing purposes, thereby avoiding the more expensive mode of crushing by steam. The writer, although no miner or engineer, has made a short calculation of the probable cost and expenses in establishing a crushing mill, with its probable results.

Crushing Mill, by steam.....	$5000	00
Building for do.....	400	00
Ten men to mine and crush the rock at $1.00 per day.....	10	00
Engineer, $1.50 per do.....	1	50
Interest on capital, $400 do.....	4	00
For the time working	5	50
Fuel and incidental costs.....	19	00

Now, suppose a mill to crush ten tons per day, and the rock to yield only $10 per ton, the result would be $100 from $21—expenses would leave a net profit of $79 per day.

THE CANADA CENTRAL RAILWAY.—This road, which is to connect Ottawa City with the Brockville and Ottawa Railroad at Carleton Place, is progressing, the cutting out and grading is going on rapidly.

C. & N. A. RAILWAY.—Captain Gitt, engineer of this railway on the American side, has been giving some information to the Houlton *Pioneer* as to the progress of the work. It appears that construction is not proceeding very rapidly. From the village of Winn, in Maine, to the Boundary Line, there are three routes under consideration. The survey of one of these is now being made by Mr. Ramsay. This line runs six miles nearer Houlton than any of the others. The *Pioneer* says that if the work is not pressed on more rapidly, Houlton will be compelled to seek connection with the St. Andrews Road. It was the general impression that the determination of the people of Houlton in this respect had been fixed for some time; but the inference to be drawn from this observation of the *Pioneer* is that when they held those town meetings for the purpose of voting aid to a branch connecting Houlton with the St. Andrews Road, they were only coquetting, with the object of stirring up the Bangor folks, and really never had any intention of assisting the Houlton Branch.

On this side of the boundary the work is proceeding as rapidly as could be expected, although very little noise is made. The track is now laid from Brundage's Point to a point upwards of two miles beyond Wood's, a distance of eighteen miles or so.

PITTSBURGH AND LAKE RAILWAY.—On the 29th Dec., the Pittsburgh and Lakefield Railway was opened. The event was celebrated by a dinner, at which about 140 persons were present. The chair was occupied by the Rev. V. Clinton, supported on the right by Mr. Grover, M.P., Judge Denniston, and Mr. Clinton, and on the left by Messrs. Covert, Carnegie, M.P.P, Read, M.P.P., and Mayor Scott. Among those who made speeches on the occasion were Major Beamish, of Port Hope, Mr. Blomfield, of Toronto, and Mr. T. White, of Hamilton. This railway, it is expected, will command the trade of Douro, Dummer, and other townships in the east, and Smith, Ennismore, and other townships in the west. The cry is—Onward to Mud Lake, and thence by a wooden railway to Haliburton.

KINGSTON, PITTSBURGH AND GANANOQUE ROAD COMPANY.—A meeting of the Directors took place on the 28th Dec. After some conversation upon the question of retaining the present Secretary, and an idea of suspending that officer for a time, it was moved by Mr. Knight, seconded by Mr. Baxter, and carried, that all books and papers relating to the business of the Kingston, Pittsburg and Gananoque Railroad Company be herewith required to be delivered up to the Board for its inspection, and that they be placed under the control of the President, if required, and in his absence, that of the Vice-President.

It was moved by Mr. Baxter, seconded by Mr. Livingston, that the salary of the Secretary and Treasurer of the Board, whose duties should also include the superintendence of the road and of Cataraqui Bridge, should be £42 10s ($170).

Mr. Hope moved in amendment, seconded by Mr. Kinghorn, that the salary of the secretary, treasurer, &c., be £50 ($200), instead of the amount in the last resolution.

The amendment was carried.

It was moved by Mr. Baxter, seconded by Mr. Livingston, that the money collected by the treasurer of the company be paid into the Bank of British North America, and drawn therefrom when required by the check of the President or Vice-President. Carried.

It was moved by Mr. Kinghorn, seconded by Mr. Baxter, and carried, that the secretary be instructed to sell the toll-gate near Mr. Strachan's to Mrs. Burke for $320, a sum it is understood she is willing to pay, Mr. Brownley not having complied with the conditions of the sale of the gate to him.

The meeting, after instructing that a copy of the minutes be forwarded to Mr. Ferguson, adjourned.

— The Great Western Railway have, it is said, notified that a settlement due by the Company to the Government has been proposed to the Board, and accepted by them, subject to the consent of the shareholders.

INSOLVENTS.—The following insolvents are gazetted:—W. F. Howell, Montreal; Frank Owens, Montreal; West Brothers, Montreal; G. T. Marston, Hull; Calvin C. Barks, Hamilton; Robert Park, Goderich; W. C. Carlisle, Montreal; Donald McDonald, Orangeville; Edwin S. Cummer, Toronto; Peter Irish, Cramahe; John Judge, Whitby; James Stephens, Peterboro; W. B. Johnson, Simcoe.

THE NEW SUSPENSION BRIDGE AT NIAGARA.

It is 900 feet below the Falls on the American side, and on the Canada side about 300 feet below the Clifton House, and half a mile from the Horse Shoe Fall.

The cables, two in number, are each composed of seven twisted wire ropes, laid, one in the centre and six surrounding it. They are anchored on the Canada side in the solid limestone rock, 18 feet below the surface, and on the New York side in a mass of solid masonry, commencing at the same depth. The anchor chains are made of Low Moor iron, in four sections of flat links. The three first sections are each 10 feet in length, two of eight links by ⅞ inchef, and one of seven links by 1 inch. The last section is composed of seven links of varying lengths, to favour the attachment and adjustment of the cable strands. The attachments are made by cast iron "yokes," of a novel but most reliable coustruction. The towers are constructed of white pine timber. Each tower at the base is in two parts, 28 feet square, diminishing to four feet at the top, with a space between them for a roadway 13 feet wide. At a convenient distance above the roadway, they are united by a system of girths and braces extending to the top. The angles of each tower are formed by four timbers, 12x12 inches, firmly bolted together, and these angles are connected together by ties and braces. The bottoms stand in cast iron shoes on the solid rock. These sixteen angle timbers meet at the top, and are housed in a heavy iron casting, on which the saddles supporting the cables and stays rest, with wrought iron rollers between. The floor beams are of white pine, each in two pieces, 3x10 inches, suspended 5 feet from centres. There are two side trusses, of the Howe pattern, which give stiffness to the structure and form the protecting railing to the railway. The floor is also stiffened by horizontal braces attached to the beams. The flooring is of Norway pine, in two thick masses, 1¼ inch each. The long suspenders are of wire rope, ⅝ of an in diameter. The short ones are of ⅝ round iron. There are twelve overfloor stays on each quarter of the floor, which are united in seven at the towers, and these are secured in the main anchorage. Some fifty wire rope guys, attaching the floor to the rocks of the cliffs and river banks, will secure the structure against the winds. Length of roadway between centres of towers, 1,268 feet; height above the water, 185 to 190 feet; length of central portion supported by the cables, between the outermost stays, 635 feet; length supported by stays and cables, 605 feet. Total length of the suspended platform, 1,240 feet. Defluction of cables in summer, 91 feet; difference in winter, 3 feet less. Full length of cables between anchorages, 1,828 feet. Height of towers—Canada, 105 feet; do. New York, 100 feet above the rock. Width of roadway, 10 feet; depth of side truss, 6½ feet. The bottom cord of the truss is placed under the beams. It is 6 inches wide and 8 inches deep at the centre of the bridge, increasing to 12 inches in width at the towers. Diameter of cable, 7 inches; number of wires in each, 931; size of wire, No. 9. Weight of cables per lineal foot, 63 lbs.; aggregate breaking strain of cables, 1,680 tons net; do. of 48 stays, 1,320 tons net; total of cables and stays, 3,000 tons net. Number of suspenders, 480; strength, 10 tons each. Weight of suspended roadway, including weight of cables and stays, 250 tons. Ordinary working load, 50 tons; maximum load, 100 tons; permanent and transitory load, 350 tons.

This work has been designed by, and executed under the direction of Mr. Samuel Keefer, one of the oldest civil engineers in the Dominion of Canada. Over twenty years ago, when suspension work was in its infancy, Mr. Keefer erected a wire suspension bridge over the Ottawa river, just below the Chaudiere Rapids.

The superintendence of construction was allot-

ted to Mr. E. F. Farrington, formerly of the Covington and Cincinnati Suspension Bridge.

It is owned by a Joint Stock Company, chartered by New York and Canada, with the following named gentlemen as principals: John J. Bush, President; Hollis White, Vice President; Delos De Wolfe, Treasurer; V. W. Smith, Secretary; and W. G. Fargo, Superintendent.

THURSDAY, JANUARY 7, 1869.

LIFE INSURANCE IN THE UNITED STATES.

An American paper having asserted that all the New York Life Companies, but two, are actually every year by their excessive expenditures alone, eating into their substance and preparing themselves for irredeemable insolvency, the Chicago *Spectator* has undertaken to refute this "wilful libel" by presenting an analysis of the receipts and disbursements during the last three years of all the insurance companies doing business in New York. The aggregates are as follows:

	1865.	1856.	1867.
Receipts	$24,897,019.24	$40,375,665.86	$56,481,996.71
Total receipts			$121,754,681.81
Exp'ditures	$10,562,796.73	$17,058,804.64	$25,650,876.42
Total expenditures			$53,272,477.79
Excess of receipts	$14,334,222.51	$23,316,861.22	$30,831,120.29
Total excess			$68,482,204.01

	1865.	1886.	1887.	Total
Per centage of expenditure to receipts	.4178	.4224	.4541	.4376

These aggregates include payments of losse on account of death claims and surplus distributions to policy holders, items not purely chargeable to current expenses. The aggregate payments of death claims and dividends amounted to $25,334,690.13, which being deducted from the total disbursements, $53,272,477.79, leaves $25,334,690.13 as the actual current expenses. Taking the receipts for the three years at $121,754,681.81, and the actual current expenses for the same period at $27,939,887.66, there is left surplus of $93,816,794.15—the per centage of expenses to receipts being .2294. The conclusion arrived at is that these companies "in the last three years, after paying all expenses, disbursing over eighteen millions of dollars among the families of deceased policyholders, and distributing nearly seven million dollars in cash dividends to surviving policy-holders, saved from their business more than seventy-seven per cent. of their current receipts."

An examination of the assets and liabilities gives the following aggregates:

	1865.	1866.	1867.
Assets	$64,232,123.24	$91,586,027.97	$125,548,951.40
Liabilities	50,439,699.26	70,979,122.76	94,875,022.36
Surplus assets	$13,792,423.98	$20,606,905.21	$30,673,928.04
Per centage of assets to liabilities	127	127	132

The liabilities increased from $50,000,000 in 1865 to $94,000,000 in 1867; the assets in the same period increased from $64,000,000 to $125,000,000; the rate of increase in liabilities in two years being 88 per cent. and in assets 95 per cent. These figures present in all its magnitude the development of life insurance, and as they are culled from official sources may be relied upon as correct. The *Spectator* says: "Looking thus at the balance sheet of these enormous operations in life contingencies, we can scarcely admit a doubt that the companies in this country are to-day in better, stronger and safer position, than they occupied before."

THE HURON AND ONTARIO SHIP CANAL.

We give up a large portion of our space to the discussion of this subject by Mr. Laidlaw, of Toronto, who has shown himself so earnest and successful an advocate of the narrow guage railways. His letter will be found full of argument, and worthy of every consideration. At another time we hope to be able to enter into the merits of the questions raised, and give both sides an impartial hearing.

PETROLEUM.

Despite the prophecies of the nervous, and the loudly expressed fears of the timid, that portion of our business community known as "Oilmen" still cherish faith in the future of oil, and are little disposed to relax their efforts to put the oil trade of Canada on a proper footing. During the first six months of the year the production at the refineries was largely in excess of the wants of the home market. In fact the competition among refiners was ruinous, and a stock of 50,000 barrels accumulated on ther hands. The price of oil opened at 15 cents per gallon, and went as low as 10 cents. The Higgins scheme was a happy hit. A combination was entered into, to extend from July to January, the refineries were leased, 3,000 barrels, at an average price of 18 cents, were bought up with Canadian capital, and no oil was produced, except for export. The effect was that the oil went up in price, and holders, not in the combination, received the benefit of a rise to 35 cents a gallon. The export to Liverpool during the season was 6,000 barrels; part of which was sold at satisfactory prices. The Canadian Land and Mineral Company sh ped 3,000 barrels. It has a still capacity manufacturing 2,500 barrels per week.

The beneficial results of the first combi tion suggested continued joint action, and Oil Refiners Association of Canada formed, whose operations will date from 1st of January. The terms of agreement pretty much the same as before. Prices h been fixed, for one to five carloads, at 35 c per gallon in London, Ontario; five carlo and upwards, 32½ cents, cash on delivery The well owners have also formed an ass ation, which embraces in the member the owners of producing wells in Petroli They purpose to sell only to the refiners' sociation; to limit the proportion to actual needs of the country, and to every possible encouragement to the ex trade.

Communications.

GEORGIAN BAY CANAL.

To the Editor Canadian Monetary Times.

SIR,—The agitation for ten million acres of in aid of the Georgian Bay Canal scheme is damaging the genuine commercial interests moral and political influence of the citize Toronto. When it is threatened, with chec the St. Lawrence Hall to make the Govern and Legislature tremble for their refusal present circumstances to consider the merit demerits of the proposed canal scheme, it is and the duty of those who dissent from the position advocated, to express their disbelief i practical necessity for, the possibility of obta money to make, and the inutility to Canadi the canal, if it were finished.

Unless their irregular and exorbitant den are complied with, certain gentlemen, us conservative in their opinions, talk rather v of what must be done to effect their purpose he Hon. M. C. Cameron, theoretically very servative, practically makes a very liberal, called for proposition as to the course he will it his duty to pursue in certain eventualities

Now, sir, the country has been watchin conduct of the people of Toronto towards t gislature, and have felt, not untutored by its sufficient jealousy of its influence. If the G ment were to appeal to the country on this tion, and call for defenders of the public and domain against the incapacity and rapa Toronto canal and railway companies, ver friends of the city would find their way b our Legislative halls.

Really genuine and practicable schemes, t vanced in preparation, might then share the dreams.

No doubt the Government feel if they ha millions of acres of land to donate, and i land, under certain contingencies, would b a source of credit, and a means to create works, their first duty would be to consider public works would do the greatest good greatest number of the present generation tario tax-payers. It will not probably b tended that Ontario should give away 250 ships of land for the almost exclusive ben a rival people, who fence us out of their with a tariff averaging 20 per cent. in heigh

The Government would probably ask selves, how this wholesale donation of ter larger than many kingdoms renowned in h

s to harmonize with the free grant, or rather apshackled system" already established.

The Government would consider whether the million acres of land were to be made accesle and habitable by the construction of the al; or if any hitherto unnavigated waters were be added to our system of navigation; and ether the proposed Niagara ship canal is to be ee canal, and would, in consequence, cause the l loss of all invested in the Georgian Bay nal—in the Georgian Bay and in the Humber y—many millions would be required in both s to make artificial harbors capable of floating ly vessels of one thousand tons burden, the the projected canal is to accommodate. How an vessels of such size are to reach Lake Ontaand where they are to load and unload, or l anchorage, has not yet been indicated. Is it a fact that there are no vessels drawing over e feet can come up the St. Lawrence?—equivalt only to a lading of 300 tons.

s there a harbor on Lake Ontario, except Kingn and the mouth of the Niagara River or a shipg port on the upper lakes, to which a vessel run, drawing over 11 feet?

Don't all ocean vessels of even 300 tons registdraw over 13 feet?

s the total freight shipped from the north shore he Georgian Bay, the Manitoulin Islands (for at 20c. an acre), and the Canadian shore of e Superior, equivalent to the lading of six sels of 1,000 tons each?

lore noteworthy still, vessels of 500 and 600 s burden do, and have, loaded whenever a go offered at any port on our coast line, from ingwood to Fort Willian, and have sailed *via* Welland Canal to Kingston or Europe.

he iron ore from the American side of Lake perior is carried by vessels of 700 and 800 tons den to the smelting works at Detroit and eland Therefore, of what necessity is the rgian Bay Canal to Canada, or even American merce?

t is maintained that the Great West will fill proposed canal with cereals, &c. If so, why s it not fill the Welland Canal?

he revenue from our existing canals has only one and one and a half per cent. on their c.

he agricultural community would have just se of complaint against a government that ld give away one-third of the public domain to sidize a canal company calculating to bring n not Canadian but United States produce, to pete in all our markets at home and abroad, n the products of their farms. The odds against n already are too great and unavoidable.

orn from 300 miles beyond Chicago is being laid down in competition with Canadian ces in Toronto, in large quantities at 60c per 56 nds. Does not that fact affect the prices of , oats and barley? As to reducing the cost of dstuffs to the "starving millions" at home, sionally used as an argument for the canal; ot bread on the average as cheap in London n Toronto? And are they not now feeding le on wheat in England? There is no use of ping argument on false premises, if the Canal e finished on the 1st of May it would not re the cost of freight from Chicago to Liverpool, horten by 24 hours the average voyage of ves from Chicago to Kingston.

or instance, a vessel leaving the head of Lake ron by proceding down through Lake Erie, at average rate of speed of sailing vessels, 5 miles hour, would, via the Welland Canal, reach ngston, about in the same time, as if she had e through the Georgian Bay Canal, at canal of speed, 2 miles an hour, and the detention sequent upon the extra locking; so that if the al were built, and toll free, it would not be to interest of vessel owners to send their vessels ough that canal.

an a jury of twelve Lake Captains be got to y these statements over their signatures?

What is really wanted and needed, is the enlargement of the Welland Canal, so that the largest sailing and steam vessels used on the upper lakes could go through easily.

To accomplish that useful and rational purpose —not requiring the thirtieth or fortieth part of the proposed cost of the Georgian Bay Canal, a very large amount of canal debentures payable in tolls could be sold in the United States.

No system of carrying from Kingston to Montreal can be devised cheaper than that now in operation, provided the Welland Canal be enlarged, and an increase of business obtained, which would stimulate and sustain competition.

The enlargement of the Welland Canal would not only pay, if American commerce were tolled, but Montreal would then have a "fair field" in which to compete with New York for the Northwestern United States trade. It is the low freights in large vessels to Buffalo, as compared with the high freights in small vessels to Kingston, from the upper lakes, that embarrasses and disables Montreal in her competition for the trade with New York.

WATER SUPPLY.

The Grand River scantily feeds the Welland Canal, and will the Severn supply two canals, with locks double the size of those in the Welland Canal? There are two canals in the Georgian Bay Canal scheme, one to lift up vessels to the level of Lake Simcoe, and the other to lower them down to the level of Lake Ontario. Yet the Severn in summer affords little enough water for a couple of large sawmills. It is said, in reply to this objection, that some huge hydraulic power is to be used to supplement the natural supplies. If there is a profit in raising water to let it fall again, why ad ocate the Georgian Bay Canal; to get the water power for Toronto, why not commence to pump our Bay, it will last as long as the Georgian Bay?

Very few people, not engineers, can comprehend the magnitude of the proposed work. I have heard it said, ignorant of its fact or falsehood, that the earth from the nine mile cut would cover four townships six feet thick, and that in this way the Holland Marsh is to be reclaimed! Would it not be better and cheaper to try hydraulics for that purpose? One authority alleges that the nine mile cut would cost more than the estimate for the whole canal; and another, that the estimates are all based on twenty-five cents per cubic yard for earth work, supposing no rock to be met with; while the actual cost of much of the earth work would exceed $3 per yard, especially that spread on the Holland Marsh.

It was tempting to the Egyptian ruler to canal the Isthmus of Suez, having a *nation* of *serfs* to labor for him; because with the Sucz Canal finished, he could toll the entire trade of Asia half of Africa, and all of Australasia. His canal affects the ultimate fate of British power and commerce in the east, because a saving of nearly two months on each voyage would be made, and a proportionate saving of wages and interest, while the cost of transporting troops and munitions of war would be greatly reduced; yet, not one guinea have the Government, the Merchants, or the Engineers of England, given publicly to aid that gigantic and important enterprise.

The Isthmus of Panama is similarly situated as regards the United States, the Pacific coast of America and Australia, a canal through it would also save a two months' voyage, yet the nations interested, and capitalists shrink from the *cost* of such an undertaking. And shall we, to save *one day's voyage*, at most two days time from Chicago to Liverpool, undertake a work of nearly double the magnitude?

Some members of our Board of Trade refer to the water power to be created, forgetting that any quantity of power is available on the Welland and St. Lawrance canals, at two or three hundred dollars for each manufactory. The western trade, if it were to pass through such a canal, would do the ratepayers of Ontario no more good than is now done by the American vessel passing through the Welland Canal. We would see them and the trade we now do in lumber and cereals from the Northern Railway sailing from the mouth of the Humber past the back of the Island, while the Northern Railway dock would be pasture for sheep, instead of a source of bread for a thousand mouths.

Niagara was not more effectually ruined by the Welland, than Toronto would be by the Georgian Bay Canal.

There is one, and only one argument, which, in the mouths of the gentlemen who advocate the canal, suffices as an answer to all objections.

It is alleged that Toronto, *i. e.*, its present merchants, would make fortunes while the canal is building. It is contended by respectable, but unthinking men, that Canada has nothing to do with the matter; give ten million acres of land, and if the Engilsh invest their money and lose it, that is their look out; we will get their money into this country and be merry over our gains, and the consciousness that our kinsmen, our fellow Britons, our protectors, have been sacrificed to our ruthless greed. This contemplated raid on the small and great hoards of prudence and self denial in England, unblushingly advocated for the foregoing reason, involves larger pecuniary losses, and is much more culpable than that made under a belief that returns would be got for the money by the projectors of the Grand Trunk Railway. Yet what a howl has been raised about our cars for our share in that scheme? Are the widows and orphans, said to be our victims, so soon to be fogotten?

While the Government, bankers and capitalists are succeeding so well in establishing Canadian credit in Britain, for practicable and judicious enterprise, this system of advocating an impracticable scheme is demoralizing public opinion here, and elsewhere is destroying confidence in Canadian enterprises, and is certain not only to defeat the ends sought, but utterly to ruin the value of Canadian endorsement on any scheme whatever.

As to the American private capital said to be available to the extent of $20,000,000, on condition that 10,000,000 acres of land are obtained, I have only to say, that, probably, the Government would sell these capitalists ten million acres of mineral lands, north of Lake Superior, for half the money, without requiring them to put a dollar in the canal, if these capitalists would agree to settle the tenth of the land every five years.

Twelve millions of dollars only are asked to build the Niagara Ship-Canal, seven miles in length. Congress has not, but may grant the money. But where, meantime, are the men with the twenty millions, ready for the Georgian Bay Canal? Surely, the shortest canal is the best investment.

The proposed Ottawa Canal route is the shortest and most feasible outlet for American commerce from the upper lakes to the sea. It may be practicable, whether it is or not there will need to be double four millions of people in the Dominion before it is undertaken. Canals are so expensive that the cost of one would build 20 railroads of the same length.

The cost of the Georgian Bay Canal at the lowest estimate—forty millions—would build a railway from Ottawa, north of Lake Nipissing, south of the coast range of mountains on the north side of Lake Superior along the table, at the height of land, straight to the Red River country. If ten, or even twenty, millions acres of land are a basis of credit for forty million dollars, then our Ontario Government might give five millions, the Quebec Government five millions, and the Dominion Government ten millions acres, (of the Hudson's Bay Territory)—in all twenty million acres under proper checks, to build a railway from Ottawa to a suitable entrepot in the Red River

district, there to build a second Moscow. Let us have four millions of good Britons, with a sprinkling of Scandinavians, along the line of that railway and in the Red River country, and with plenty of coals, iron, and Britons, we may—those will who live to see it—bid defiance to all the military power thence to Cape Horn.

I am, sir, your obedient servant,

G. LAIDLAW.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Since the New Year the stock market has been very brisk, transactions numerous and prices well maintained.

Bank Stock—There were transactions in Montreal at 138½, with very little offering. Sellers are now asking ½ per cent. prem. for Ontario; large sales at par. Toronto is in great demand, none offering. Sales of Royal Canadian are reported at 87, ex-dividend; small lots offering at 86. Sellers are asking 101½ and 102, ex-dividend, for Commerce, with buyers at 101. Gore offering at 40, with no buyers at over 35. Transactions in Merchants' occurred at 106, ex-dividend; little doing. Quebec is nominal at 98½ to 99½. Sales of Molson's occurred at 110; little offering. City is offered at 101½. There are buyers of Du Peuple at 108. Sales of Jacques Cartier occurred at 107½; sellers asking 108. There are buyers of Union at 103, and no sellers under 104. Nothing doing in other banks.

Debentures—No Canada debentures in market; they would command a high price. No Toronto in market; the last sales were at rates to yield 6¾ per. cent. to purchasers. There were small sales of County during the week; they are eagerly sought after to pay 6½ per cent. interest.

Sundries—There were transactions in Canada Permanent Building Society at 120, ex-dividend; sellers now ask 121. Sales of Western Canada occurred at 113½, ex-dividend; little offering. Freehold enquired for none in market; 105½ would be paid. Sales of Montreal Telegraph occurred at 139; a half-yearly dividend of 5 per cent. is declared, payable on the 8th inst. A small sale of Canada Landed Credit occurred at 72; little in market. Several transactions occurred in British America Assurance at 57. City Gas in great demand; none offering. Mortgages—none offering. Money remains much the same as last week.

PAPER MONEY.

In his report for 1867, the Secretary of the United States Treasury makes the following remarks respecting paper money:

The Government of Austria, during the wars with Napoleon, resorted to the issue of its own notes to circulate as money. From time to time, as expenditure demanded, the volume was augmented, until in 1809, the amount outstanding reached a sum equivalent in our money to six hundred million dollars. In 1811 this paper was called in and replaced by "notes of redemption," as they were termed, at the rate of twenty cents on the dollar. After the return of peace in 1815, these "notes of redemption," together with a large amount of subsequent issues which had been depreciated, were taken up, partly in Bank of Austria notes and partly by conversion into Bank stock, at the rate of forty cents on the dollar. This disposed of the original issue at the rate of eight cents on the dollar.

Russia tried the experiment, and issued Government notes in making disbursements, which, at first, while the amount was small, circulated at par; but the "fatal facility," was fatal here as elsewhere.

There is not a single explanation on record of the power of creating money out of cheap materials having been exercised by a sovereign state for any length of time, or through any season of public difficulty, without having been abused. * * * * The temptation to substitute issues for taxation, to relieve the wants of the treasury, * * * becomes too strong to be resisted. The career of debasement once entered upon, it has no pause till there is scarcely any value left to be destroyed. Fullerton on the Regulation of Currencies, p. 24. "There has never been a Government yet, of the many which have issued irredeemable paper, which had the wisdom and firmness to resist, for any great length of time, the strong temptation to over issues. * * * When once the press is set at work, it must work on with livelier speed; because, just in the ratio of the depreciation is the greater amount required." Perry's Elements of Political Economy.

The advocates of a currency composed exclusively of Government paper, and that in augmented volume, cannot claim even the merit of originality; the experiment has been tried over and over again, and with but one result: the paper goes down until it becomes so nearly worthless that it is taken out of the way at some nominal rate, or repudiated altogether. There is no good reason to believe that it would fare any better now. On the contrary, the experience of the last five years in this country is but the counterpart of the earlier stages of the experiment in other countries and in other times.

In view of all the circumstances surrounding the public debt, the conditions under which, and the purposes for which it was contracted, the only rational course which can be pursued is the one that would suggest itself to every honorable business man; the careful husbanding of the national resources by strict economy in every branch of expenditure, and a plain recognition of the character of the national obligations. Floating indebtedness is always the most embarrassing. A wise policy would remove it, so that it should not be an element of uncertainty or of obstruction in the way of national credit.

COMMERCIAL BANK OF NEW BRUNSWICK.

A telegram dated January 5 says:—An adjourned meeting of the Stockholders of the Commercial Bank was held to-day, when the Directors presented an amended and more detailed report, which differs but slightly from the former. Total assets estimated at $765,671; liabilities, $630,958. Much of the assets consists of landed and other property difficult to realize. It is generally understood that nearly the entire capital has been lost. The Directors, in submitting the report, protested against further scrutiny into the accounts as prejudicial to the interests of the Stockholders, and a violation of the Bank Charter. Should the meeting still insist on fuller information they would retire. After a long discussion the report was referred back to the Directors, and the meeting adjourned to the 9th of March. This virtually leaves the Directors to wind up the bank, as the charter expires on Friday.

INTERNATIONAL CURRENCY.—The French Government has called in all the two and one-franc, half-franc, and four-sou pieces, as well as certain Belgian, Italian, and Swiss silver coins lately current in France. After the last day of the present year, no French or Italian coin of the above denominations will be received which bears date earlier than 1864; the silver Belgian pieces of Leopold I., and the Swiss pieces coined previously to 1860, will also be withdrawn at the same period. The public currency of these coins actually ceased on the 1st of October, but they will be received or exchanged at the postoffice and public *caisses* until the end of the year. The object of this arrangement is, to carry out the terms of a convention between France, Italy, Belgium and Switzerland, by which the coins of each country become current in the other, on the condition that they contain one uniform quantity of silver—namely, 835 parts in 1,000. Some of them at present contain 900 parts of silver, and others not more than 800. A similar convention is being made with the Papal Government, and when all these regulations are in force, the same money, as well as the gold, of these five countries will be current without difference of exchange and without margin for speculation and export. *Produce Markets Review, Dec. 5.*

DEATH OF MR. CONVERSE.—The news of the death of Mr. Converse, accountant of the Bank of Montreal, has excited much sympathy and regret. From all who were brought into contact with him in business relations. His long connection with the Bank of Montreal had made him generally known, and his quiet and attentive discharge of his duties made him a universal favorite. By the managers and directors of the Bank he was highly esteemed and respected, and the utmost confidence was felt in his management of the important department more immediately under his care, whose loss being felt as one that will not be easily repaired. His personal friends, of whom he had many, were warmly attached to him.

WHY THE BANK OF FRANCE IS LOSING GOLD.—The value of the wheat imported into France in the first seven months of this year was £10,520,784, as compared with £2,770,416 in the corresponding period of 1867, and £59,171 in the corresponding period of 1866. Of the sum named for wheat imported by the French in the first seven months of this year £277,220 went to the United Kingdom, £336,672 to Belgium, £1,486,94[illegible] Russia, £1,431,784 to the Zollverein, £650,38[illegible] to Italy, and £4,530,960 to Turkey and the Danubian Principalities. It will be seen that this year's figures showed a considerable expansion compared with 1867 and 1866; but while France paid £10,520,784 for the wheat which she imported to July 31 this year, the corresponding payment made by Great Britain in the same period was no less than £15,320,539.

BANK OF B. N. A. *vs.* TORRANCE.—Judgment was delivered in this case on the 31st December in favour of the plaintiffs.

GAS EXPLOSION.

From a recent article in the 'Monitor,' we take the following extract:—Coal gas is lighter than the atmosphere, and leaking in a cellar or other room, where most of these accidents occur, has a tendency to rise and diffuse itself throughout the house, escaping, and at the same time giving notice of its presence by its offensive odor. Coal gas line is heavier than the atmosphere and falls to the ground, rising only as water would rise, and the room fills. It does not send its odor to the upper parts of the house, but lurks, an unsuspected danger for the approach of the fatal candle or match. On the other hand, it may be said that the [illegible] ten burners in the upper parts of the rooms to [illegible] there is one light near the floor, making the chances ten to one that coal gas will be ignited sooner that the other, and equalizing to some extent the dangers arising from the different properties; but it is equally true that the diffusive property of the coal gas sends it away, or so dilutes the atmosphere as to render it measurably less, while the other, in a still room or cellar remains comparatively solid, and hence more capable of mischief.

Both articles emit an offensive odor, but that of gasoline is similar to the smell of kerosene, and, while familiar to all who have used "coal oil" lamps, is not generally regarded as a sign of danger, while the "smell of gas" invariably suggests a leak, and is a recognized warning of something wrong.

al gas does not condense. Some of the gaso- apparatuses are reported to have overcome tendency in that article, but so far as we knowledge of the various processes, they re- le each other in this, that the gasoline gas is y air forced through the liquid, and impreg- with its vapor. This evaporation, if made ow temperature, is not liable to condensation e pipes, but taking off only the more volatile of the liquid, it leaves a portion of the gaso- n the tank, and, being wasteful and expen- reates a temptation to employ artificial heat aporate the whole. If evaporated at a high erature, it will inevitably condense in the . Being changed from its liquid state by it naturally becomes liquid again as soon as s away from the heat. This is the source of l-known danger; a match is lighted and the turned on," but, instead of gas, a stream of phtha spirts out, which is instantly ignited, falling on the person or furniture in the of liquid fire, burns with an unquenchable nce. Several buildings and lives have thus lost. Economy demands the evaporation of e gasoline; safety demands only such evapo- as can be made at a low temperature. The ct seems radical and irreconcilable. Until ll have been overcome, safety and economy t be combined in the use of gasoline.

r the differences above stated, we conclude coal gas is safer than gasoline.

vertheless, we do not understand that ex- nce is, so far, conclusive against the use soline. Many of the accidents that have red from it might have occurred with gas. Leaky pipes, defective meters, care- acts, all these are incident to the use of r, and productive of danger from both l. Who would think for a moment of ng a coal gas generator under his draw- oom, or of depositing a barrel of gunpow- in his cellar? Yet either would be as nt as to keep gasoline, or to manufac- its gas, on one's premises. This seems s to be the point that has been ignored. rate the gas at a distance of not less than 50 rom any building, run to your house through e pipes as you would city gas from the street at nothing but pipes, and those only such ing city gas, enter your premises; see, also these have been well put up and properly l, and that no leaks exist, and we do not un- and that the average danger of one kind of s greater than the other. When we say "pro- put up," we mean with grades, and traps, faucets, to provide for condensation and age. We mean that no fire or artificial heat approach the gasoline, or the apparatus. ging the gasoline on one's ground is as dan- as bringing the same amount of powder. are perfectly harmless as long as no fire s near them, but there is little choice between when once the fire touches either.

e would not, under any consideration, insure where one of these infernal machines was e building, or within burning distance of it. rience, so far, we regard as conclusive on that , and we again call the attention of Under- rs to the encroachments of these machines, suggest that they be forewarned, and decline sks containing them, or influenced by their sure.

The annual meeting of the shareholders of t. Lawrence Warehouse and Dock Company be held in Quebec on the first Monday in h.

ALS.—Mr. Alexander Gibson, of New Bruns- , shipped during seven months, 77,942,511 icial feet of deals and battens, and 769,505 gs to Liverpool.

Messrs. Copp and Proctor, of Hamilton, have ted the Directorships of the Dominion Tele- Company, vacated by Messrs. McInnis & t.

MADERIA WINES.—According to a report of Messrs. Richard Symonds and Son, the Maderia vintage for 1868 shows a very considerable increase on recent years, and may attain about 4,000 pipes—a quantity still very small compared with that produced in the prosperous days of the Island before 1851. About nine-tenths were grown on the south side of the Island, where the best "Maderias" were formerly produced, and will probably be good wines, taking into consideration the youth of the plants; the remaining tenth, grown on the north side, will be very inferior. Of the total about three-fourths will be required for island consumption and for conversion into brandy, so that only about 1,000 pipes will ultimately be available for exportation. These will be the best wines of the year, but, before they are shipped, should be allowed some five years to attain thorough maturity. The progress of renewed vine culture is slow, but it is nevertheless marked as regards both quantity and quality.

FLAG STONE.—The Brampton flagstone quarries will be worked vigorously next spring. The quarries are situate on Lot 26, in the 4th Concession of Brampton, on the main road from Melbourne, close to the Grand Trunk Railway. The flag stone rises abruptly from the road to an elevation of 126 feet, and extends along the highway about a quarter of a mile, affording great facilities for quarrying, and space for the employment of a large number of gangs of men to work at the same time. The stone is of a hard, tough and non-absorbing nature, with a perfect claveage, splitting through the bed into any thickness required, and easily dressed with hammer or saw. Unlike slate it is capable of standing fire and frost without injury, as has been proved by many years trial.

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, Jan. 5, 1869.

Having been absent from the city during our Christmas holidays, I cannot give the details of business that I am in the habit of sending you, and can only state that in all the wholesale departments matters have been exceedingly flat. Of course our merchants are prepared for this state of thing, as during the large fall sales, retailers both in town and in the country lay in their supplies of staples, and after that only buy to keep assortments complete. I have already informed you that our fall sales went off unsatisfactorily, although a fair amount was placed. This arises from a diffidence on the part of the Western buyers to operate till they practically realized the result of the good harvest, and from the keen competition of Toronto and other western cities, whose merchants have imported direct and are naturally anxious to secure what they consider their legitimate business direct through themselves instead of its passing through Montreal. This city possesses a large connection in all sections of the two Provinces, commands an immense capital and most of the western men are our debtors and can get better accommodation, if hard pressed, here than in any other city. Our stocks are larger and more varied, because they have to be suited to a larger range of customers, and we can sell at prices, if anything, lower than the wholsale western men.

In Produce the market has been very dull, so much so that it is difficult to give more than nominal quotations—the business done being only from hand to mouth. This applies especially to flour, grain and provisions. Butter has hardly held its own, though very fine fresh butter is scarce and would command almost any price.

Taken generally, the trade of Montreal for 1868 has been satisfactory; in the spring everything was dull and the prospects were anything but inviting; during the summer this state of things continued but with a distant breaking of the clouds, as the prospects of the coming harvest appeared more and more bright. Our hopes in that direction were verified to a large extent in Western Canada, especially in the great staple of wheat; and the farmers, after realizing, to a great extent found themselves in a position to pay off outstanding liabilities and yet be well forward with future payments. In Lower Canada, to which my personal observations have chiefly been restricted, the result of the harvest has not been so fortunate, as the leading grains, such as barley, oats, peas, &c., have been almost a total failure; our crops of wheat have been good, but we do not grow sufficient for our own consumption.

Toronto Market.

Trade is steadily improving since the holidays and a general opinion seems to be, that the winter trade promises well. In some of the leading branches, attention has been chiefly directed to stock-taking and the balancing of books.

PRODUCE.—*Wheat.*—Receipts for the week, 10,050 bush.; the market for Spring is steady at $1 to $1.03 in store; there is a moderate demand and not much offering. Midge proof is worth the same prices as Spring, but there is little doing. Fall is quiet at $1.10 to $1.12 for the best samples.

The following were the receipts and shipments of wheat at the Toronto warehouses in the years named:—

	Fall Wheat.	Spring Wheat.
1868.		
Receipts,.....bush.	252,589	364,174
Shipments... "	240,191	354.523
1867.		
Receipts,.....bush.	268,116	485,983
Shipments... "	303,152	478,435
1866.		
Receipts,.....bush.	534,272	493,197
Shipments... "	529,027	406,907
1865.		
Receipts.....bush.	587.688	238,000
Shipments... "	586,904	358,044

Barley.—Receipts by cars, 780 bush.; holders ask $1.27 to $1.30, and buyers offer $1.25 to $1.27; no sales. The total receipts of barley at the port of Toronto, for the years named, were—

Receipts in 1868, ...bu	988,410
Receipts in 1867, ...	1,025,455
Receipts in 1866, ...	1,278.767
Receipts in 1865, ...	1,197,126

Peas—No receipts, and market is dull and nominal at quotations. *Oats*—Receipts by cars, 2,400 bush. Under increased receipts, the market is duller, and cars are now worth 51c. to 52c.; sales at 52c.

FLOUR.—Receipts for the week, 3,200 barrels. There is not much offering; sellers ask $4.55 to $4.60 for No. 1 Superfine, with no buyers above $4.50; sale one lot at $4,52; Extra is nominal at $5.25, and fancy at $4.90 to $5.00. There is no demand for the grades above No. 1 Superfine.

PROVISIONS.—*Dressed Hogs*—The market is active and firm, and closed at considerable advance on last week's quotations. Hogs dividing on 200 lbs are now worth $7.90, and good to heavy Hogs bring $8 to $8.25. *Butter*—The stock is light, and nothing doing except in the home trade. Other provisions we have nothing reliable to report.

PETROLEUM.—The new combination have now entire control of the market, and prices are fixed at 32½ to 35, according to quantity purchased. The lowest quantity that the Association will sell is one carload. In our market a fair business has been done for consumption at the quotations elsewhere given. Benzine is falling into disuse, as turpentine is said to be largely substituted for it.

— It is said that peat has been discovered in Hamilton, in St. Lawrence Ward, during the course of making excavations for a sewer.

California Wheat Market.

The San Francisco Market Review of December 22, says : It has been estimated by the best authorities that, over and above all domestic requirements, California produced this harvest year, 8,000,000 centals for export, or nearly 3,000,000 more than last year. Of this surplus we have already exported 3,600,000 centals, divided as follows :—to Great Britain 1,600,000 centals ; to domestic Atlantic ports, chiefly to New York, 1,000,000 centals ; and to all other countries, 1,000,000 centals—leaving us with a surplus still on hand of 4,400,000 centals. These figures represent wheat, and flour reduced to wheat. In all of last year we shipped 5,312,000 centals, so that the surplus of this year, yet to be marketed, is within 712,000 centals of the whole of last year's export. No account is taken of the Oregon crop in this statement. It will require two hundred and twenty ships of a thousand tons each to carry away the remaining surplus wheat of California alone.

Losses on the Lakes—Harbors of Refuge.

The season of 1868, as has been shown by the reports already published, was attended by a far greater loss to the shipping than any preceding one in the annals of navigation, while a fearful loss of life has occurred. Sixteen disasters occurred during the month of March; 110 in April; 118 during May; 101 in June; 94 in July; 126 in August; 208 in September; 233 in October; 174 in November, and 12 in December. A large majority of the disasters on Lake Erie have taken place on the northern or Canadian coast, and in one particular instance no less than five shipwrecks are recorded within a distance extending only about one hundred miles. Vessels destined through that lake invariably pursue that route, being not only the most direct but more contiguous to various leas, which are interspersed at various points. These points of refuge alluded to, however, being located under the shelter of points or peninsulas of land extending well out into the lake, are very hazardous in resorting to when vessels are suddenly overtaken by a sudden squall or gale of wind from an opposite quarter, and it is chiefly on such occasions that vessels are driven upon the beach and in numerous instances suffer complete and total shipwreck. The same views may also be applied to a greater or less extent with reference to Lake Huron. For the want of a reliable as well as an accessible point of shelter on that lake two fine steamers have been driven on a rock-bound coast and narrowly escaped total loss, while for the same reason the disasters to the sailing vessels on that lake have been beyond precedent. As the Government of the neighboring Dominion of Canada have, as we are informed, been making surveys quite recently, with the view of locating a harbor of refuge on both of the above lakes, and doubtless will soon determine as to the feasibility of a proper site, a deep interest is felt on the part of our ship owners and ship masters at all our lake ports, where those harbors, if established, are to be located. On Lake Huron, Goderich will, without doubt, be decided on, and is unquestionably the most fit of all seeking that end. On Lake Erie, the location, as we have urged on repeated occasions, should be about half way distant between Buffalo and the Detroit river, or midway between the canal and the islands, and not less than fifty miles to the westward of Long Point. The selection should be at a point where a stream or river puts out into the lake, that can without an unreasonable outlay be converted into a harbor of sufficient width, and having also a wide entrance or mouth, not less than 150 feet. With these facilities, which should be of easy approach, with a light elevated and piers of proper extension in the lake, there can be no doubt that a harbor of refuge on either of the above lakes would be the means of saving many lives and much property, and ere long would be more than self-sustaining. On Lake Erie, so far as American ship owners and masters are interested in the above undertakings, and they are, as we have already stated, largely so, Port Burwell is the more preferable of all which have been spoken of, and without doubt such will be the decision of the Canadian Government.

The Pork Trade.

A recent St. Louis circular says: "The South is consuming meat of the new crop, while the old stock was consumed long before the new cure could be got forward. In the face of this fact, we have the evidence that there is at least an even chance for a small crop of hogs to give us the meat for the coming wants. Could we come up to last year's crop we should then be deficient, for that only met the necessities, which were cramped by the lack of means to pay. Now, with increased facilities for payment, and a consumption, so far, of the new crop, astonishing and unusual, and yet legitimate, the "Hog Product" is to be short this year in any event that can now occur. Some writers are descanting upon the fact that the present high prices are checking the exportations. To our mind this is of but little concern, for, from present appearances, the West will have no provisions to send out of the country. The home consumption will be as much as we can meet, and we may not be able to even do that if the hogs do not come forward in larger supply than they have thus far, and than a majority predict they will. One thing is palpable, either hogs must come down in price or the product must go higher than any prices we have yet seen. It is estimated that at the present time the stock of Lard is only about half and that of Pork only about one quarter of the stock of last year at Chicago, and other points also short."

London Barley Market.

Dec. 2.—The firmness of the barley trade noticed last month has been maintained, and high prices have again been realised for malting produce. Larger supplies of barley have, however, been received, and the maltsters have operated with a greater degree of caution ; nevertheless, 53s. and 54s. per quarter have been obtained for fine qualities of barley, being quite equal to the prices current at this period last month. The quality of the English barley is still very fine, and the high quotations have brought larger quantities to market than had been expected. As, however, the crop is a small one, it is evident that although our supplies may be tolerably good now, there will be a great scarcity of English barley later in the season, and, consequently, a continuance of high prices may be expected, unless, indeed, which is somewhat improbable, our importations should be very materially increased.

From abroad, the imports of barley have b good. In October they amounted to 755,798 c against 463,368 cwt. last year, 839,612 cwt 1866, and 726,167 cwt. in 1865. The increas our foreign supply is due, in a great measure a large importation from France. From Germ very moderate supplies have been received, w as regards America, rather an importing coun a considerable quantity of produce has been chased here for shipment to New York. American demand is just now a feature in trade ; about 40,000 quarters have been purch in London and in other parts of the country, as a considerable fall took place in the valu barley at New York on Monday, the demand been much less active during the last few day

The English Hop Crop of 1868.

The past season has been one of the most riable and precarious known to hop growers many years, for at the period of the vine cas off the young hop shoots there was the promi one of the finest and heaviest hop crops of n years; there was an entire absence of mildew insects, which invariably infest the young crops and deteriorate the produce, and the growers very reasonably estimated an unusu heavy yield. In Kent and other well cultiv hop districts the hops were unprecedentedly l and there was every reasonable prospect tha picking time a prolific season would be the re but towards the close of the summer the tinued drought set in, which very fearfully tated against the consummation of the hop throughout the country; but the want of moi to the hop roots had an injurious effect- foliage of the hops expanded and became and chaffy, and the aroma so essential to qualities was lost; and after gathering, the pr of kiln drying was almost superfluous, an hops trod into the pockets bulky and light. the present year a far larger acreage of hop was gathered and cured than at any pre period. In 1855 hop cultivation in this co had attained its highest standard, and 5 acres of land were devoted to the cultivati hops, and a sum of £398,365 was paid as ol duty (with additional imposts) to the In Revenue; but from that year many hop ga ware grubbed up, and in the next four years under hop cultivation had been diminishe 14,028 acres; in 1859 the hop yield was h and the old duty amounted to £328,070 o growth of 43,729 acres of hops, but on the abolition of the hop duty growers commence tending hop plantations which have annual creased, and this year 63,500 acres of hops been gathered and cured. Kent is the l hop county, and comprises nearly 30,000 a hop garden. Sussex is a large hop county Worcestershire is a more extensive and imp hop growing locality, and the hop garden being increased. Herefordshire cultivates a section of hop land. Hants and Berks co hop growing districts. Surrey has at celebrity for its produce of hops of peculi superior rich flavor, and possessing proper high caste, the hops of this county (Farnl have hitherto attained the highest value; bu year they were surpassed by Kent, and were most decidedly the best qualities. has grown from 7 to 14 cwt. an acre, b qualities are of a low standard. Kent pr an average yield of 8 cwt. an acre; and varied from 7 to 12 cwt.: and country (var to 11 cwt. per acre.—*Morgan's Trade Jour*

Petroleum.

Crude in bulk is coming forward a littl freely, but there is no disposition to giv further in prices, although the demand is ate ; we quote at 17½c. Refined standard w trade is a little better to-day. The demand ever, is wholly speculative. Prices are a half cent per gallon higher, closing at 31½c sales are 1,500 bbls. at 31c. ; 500 bbls. at and 1,000 bbls, on private terms. For Pl

delivery the demand is more active, mostly peculate' with a little steadier tone in the et at the close. The sales are 3,000 bbls. d standard white, for the balance of the h at 30c. : 3,000 bbls. do. for January, uary and March delivery, at 30c., and 1,000 do. for March at 30½c.

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, Secretary, | GUY. R. PHELPS, President,
EDWIN W. BRYANT, Actuary, | ZEPHANIAH PRESTON, Vice President.
LUCIAN S. WILCOX, Medical Examiner.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS.

Assets, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

Surplus Assets, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

Its Dividends—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

Its Success Unparalleled—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

Its Responsibility—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

Its Liberality—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

Medical Referees—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

TO MONETARY MEN.—Merchants, Insurance Agents Lawyers, Bankers, Railway and Steamboat Travellers, Mining Agents, Directors and Stockholders of Public Companies, and other persons visiting Montreal for business or pleasure, are here by most respectfully informed that the undersigned propeses to furnish the best hotel accommodation at the most reasonable charges. It is our study to provide every comfort and accommodation to all our guests, especially for gentlemen engaged as above. To those who have been accustomed to patronize other first-class hotels, we only ask a trial; we have the same accommodation and our table is furnished with every delicacy of the season.

H. DUCLOS.

Nov. 22, 1867. 15-1y

The Albion Hotel,

MONTREAL,

ONE of the oldest established houses in the City is again under the personal management of

Mr. DECKER,

Who, to accommodate his rapidly increasing business, is adding Eighty more Rooms to the house, making the Albion one of the *Largest Establishments in Canada.*

June, 1868. 42-6ms

TORONTO PRICES CURRENT.—JANUARY 7, 1869.

Canada Life Assurance Company.

CAPITAL AND CASH ASSETS

OVER $2,000,000.

SUMS ASSURED

$5,000,000.

A COMPARISON of the rates of this Company with others cannot fail to demonstrate the advantage of the low premiums, which, by the higher returns from its investments, it is enabled to offer.

IF PREFERRED, ASSURERS NEED ONLY

PAY ONE-HALF OF EACH YEAR'S PREMIUM IN CASH,

during the whole term of policies on the 10 payment plan, or for seven years on the whole life plan.

For the unpaid portion of premiums,

"NOTES" ARE NOT REQUIRED BY THIS COMPANY,

so that assurers are not liable to be called upon for payment of these, nor for assessments upon them, as in the case of Mutual Companies.

Every facility and advantage which can be afforded are offered by this Company.

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG.:
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

Meetings.

BANK JACQUES CARTIER.

The general meeting was held in Montreal at the office of the Bank, on the 17th December, 1868, Hon. J. L. Beaudry, President of the Bank, having been called to the chair, and Mr. Cotté requested to act as Secretary, the President read the following—the seventh annual report of the Bank:

GENTLEMEN,—The Directors of the Bank Jacques Cartier, in submitting to you the report of the Bank for the year just ended, cannot state that the amount of profits is equal to that of preceding years, but the result of its operations has been relatively satisfactory.

All amongst you must have witnessed the serious fluctuations during the past year in general business, and the trade of Lower Canada appears to have suffered the most.

Failures have become in some way or other a matter of custom, and have succeeded each other with alarming rapidity. In other words commercial morality appears so singularly debased that a large portion of the community seem to consider it as not dishonorable to become bankrupt, or even fraudulently bankrupt, as a meaus to enrich themselves at the expense of others. Added to this the result of the harvest has been below an average, and you will have a faint idea of the trouble and anxiety of the Directors of the Bank, in order to arrive at the following results:

Balance of profit and loss to 30th Nov. 1867,		$4,914 24
Net profit of last year to 30th Nov. 1868		89,901 16
Total		94,815 40
Dedrct dividend 4 per cent. 1st June, 1868	$39,012 25	
Deduct dividend 4 per cent. 1st Dec. 1868	$39,693 57,	78,705 83
Balance		$16,109 57
From this balance is deducted for the Reserve Fund		5,000 00
Balance to cover probable losses and doubtful debts		$11,109 57

The Reserve Fund now amounts to $90,000, equal to 9 per cent on the capital of the Bank.

Here, as elsewhere, after many years of prosperity, an annoying reaction has made itself felt, and confidence strongly shaken, in paralyzing business, has produced an unproductive accumulation of capital. To such an extent is this the case that never in Canada was so much capital seeking employment. To convince one of this fact, it is sufficient to look at the balance sheet attached to this report and you will there see that the Bank has in convertible assets $4 to $1 on its circulation, and $1 to $2½ due on its liabilities.

This state of affairs although very reassuring to the holders of our notes and the depositors, is not satisfactory to your Directors, who desired to see the funds of the Bank employed in a more active manner.

Let us hope that there will soon be a chauge for the better, and that the Bank will obtain its fair allowance of the business accruing from any such change.

The books and other vouchers of the Bank have, as usual, received the attention of your Directors, and have been found to be perfectly correct.

The retiring Directors are Messrs. C. S. Rodin, J. L. Beaudry, and L. J. Beliveau. They are eligible for re-election.

In conclusion, your Directors have pleasure in noticing the scrupulous assiduity to their business, of the cashier and the other officers of the Bank. All of which is respectfully submitted.

J. L. BEAUDRY, President.

Montreal, Dec. 17, 1868.

Balance sheet to 30th November, 1868:

ASSETS.

Bullion and Government notes	$200,873 89	
Government debentures	101,226 67	
Notes and cheques of other banks	25,606 63	
Balances due by other banks	104,353 53	
	$432,060 72	
Notes discounted	$1,710,601 35	
	$2,142,662 07	

LIABILITIES.

Paid up capital	$994,310 00
Reserve Fund	90,000 00
Profit and loss	11,109 57
Circulation	100,801 00
Due other banks	1,326 89
Deposits bearing interest	632,647 46
Deposits not bearing interest	269,535 97
Dividend payable 1st December	39,693 57
Unclaimed dividends	3,237 66
	$2,142,662 07

H. COTTE, Cashier.

The usual vote of thanks to the President and Directors of the Bank was then proposed and carried.

Messrs. C. S. Rodin, J. B. Beaudry, and L. J. Beliveau, were re-elected Directors.

HURON AND ONTARIO SHIP CANAL.

A meeting of the Toronto Board of Trade was held on the 13th in the Mechanics' Institute, for the purpose of considering the prospects of the proposed Georgian Bay Ship Canal.

The meeting was very largely attended—in fact, it was the largest meeting of the Board for some years. A number of spectators were in the Board-room, to listen to the discussion. Among others, there were present the President, Mr. J. G. Worts, who occupied the chair, Messrs. Wm. Gooderham, sen., W. Gooderham, jun., T. C. Chisholm, G. Laidlaw, Wm. Ramsay, William Thompson, J. Burns, T. D. Harris, S. Spreull, James Young, W. F. McMaster, James Stock, N. Barnhart, F. W. Coate W. J. McDonnell, W. Myles, A. M. Smith, R. Wilkes, — Robertson, G. Gooderham, J. Adamson, H. Scott, J. Harris, F. A. Rolph, H. Gooderham, A. V. Delaporte, J. Nelson, J. Campbell, G. H. Wyatt, and many others.

After explaining the object of the meeting the Chairman called upon Mr. T. C. Chisholm, who moved, seconded by Mr. Gooderham, the following resolution:

"That the shipping and commercial interests of the Dominion of Canada, or the Province of Ontario do not require the construction of the Georgian Bay Canal."

In moving the resolution, Mr. Chisholm stated that he had been opposed to the construction of the canal ever since the subject was first broached, as being antagonistic to the interests of the country. He found that Mr. Capreol, in his pamphlet, set down the distance which would be saved in the carrying of grain from Chicago to New York, by the proposed canal, at 460 miles. The speaker, to refute this statement, gave the distances between the several points on the Welland Canal route, and between points on the route which would have to be travelled in passing through the projected Georgian Bay Canal, showing that the distance saved would only be 240 miles.

The total amount of grain which could possibly be shipped through the projected canal in a year would be as fol ows:

One vessel each way every hour, night and day for 7 months—26 days to the month, or 182 days —24 vessels each day down, gives 4368 vessels; estimate each vessel at 25,000 bush., give 109,200,000 bush., or 3,276,000 tons at 80c. per ton, the proposed toll would produce..... $2,620,800

Canal to cost $40,000,000		
Interest on that sum at 7% would be.....	2,800,000	
Add working expenses and repairs.....	600,000	
		3,400,000
Annual loss.....		779,200

This calculation is based on Mr. Capreol's figures, but all lake captains say the canal would not be used if the toll was over 20c. per ton—the same as on the Welland Canal—the result would be as follows:—

3,276,000 tons at 20c.....		$655,200
Less interest.....	$2,800,000	
Working expenses and repairs	6,00,000	
		3,400,000
Annual loss.....		$2,744,800

In order to ascertain what were the feelings of captains of vessels on the subject of constructing the canal, the speaker had written the following letter:—

"Toronto, Jan. 11, 1869.

"Dear Sirs,—In Mr. Capreol's proposition to build the Georgian Bay Canal, he proposes to charge 80 cts. per ton on grain, which is 2 cts. and 4 mills per bushel on wheat. Will you give me your opinion as to the number of steamers and vessels that would pass through it in preference to the Welland Canal, where the toll is 20c. per ton or 6 mills per bushel; also your opinion as to the number of steamers and vessels that would pass through in preference to the Welland Canal, provided the tolls were the same, 20c. per ton? The Georgian Bay Canal will be 100 miles long, have 42 locks, 31 of which are to have an average lift of 15 feet 2 inches; 6 a lift of 15 ft, ; and 5 a lift of 8 ft. Will you give me your opinion as to the average time it would take to lock a steamer or vessel of 1,000 tons through these locks.

"Yours truly,

"Thos. C. Chisholm."

The following was the answer which he received, signed by a number of captains of vessels and steamboats:—

T. C. Chisholm.

Dear Sir—In reply to your letter of the 11th, we, the undersigned steamboat and vessel captains beg leave to say that, at the toll of 80c. per ton on the Georgian Bay Canal, not one steamboat or vessel would pass through it. If the tolls were the same as on the Welland Canal 20c. per ton, we would decide as to which route we would take on arrival at the Straits of Mackinaw. We consider 30 minutes for each lock a low estimate."

Captain Frank Jackman,
" S. Sylvester,
" J. Jackson,
" Arch. Taylor,
" Henry Jackman,
" Jno. McGann,
" S. S. Hamilton,
" J. Jackman,
" Joseph Kennedy,
" G. B. Chisholm,
" Jno. Kemp,
" Geo. Coot,
" M. C. Thompson,
" Wm. Coot,
" Hiram Williams,
" Duncan Chisholm,
" J. T. Douglass,
" Robt. Thomas.

After reading the above, the speaker went on to say that grain was carried on the Northern Railway, a distance of 94 miles, at the rate of one cent and five mills per bushel per mile; the rate from Chicago to Toronto in last December was only one cent and one mill. Mr. Capreol proposed to carry it at one cent and one mill per bushel per mile. Then there was a railway, building, direct from Oswego to New York, and intended for carrying grain, which would be another rival to the proposed canal. The speaker closed by adverting to the fact that, during six months of last year, grain was carried from Chicago to Buffalo at three cents and sometimes even as low as two cents per bushel, while Mr. Capreol proposed to charge two cents and one mill for the passage through the canal.

Mr. Wm. Gooderham, jr. had great pleasure in seconding the resolution.

Mr. Chisholm further pointed out the absurdity of the Company's statements in reference to the immense water power that they allege the canal would give to Toronto, and showed that the head of water spoken of could not be obtained without laying a pipe all the way to Lake Simcoe.

Mr. Wm. Gooderham, sen., seconded the resolution. Messrs. Thompson, McDonell, F. C. Capreol and Coate objected to the proceedings of the meeting and defended the canal project; and Mr. A. M. Smith, Mr. G. Laidlaw, Mr. J. G. Worts, and Mr. R. Wilkes spoke against it, some of them very forcibly and at considerable length. The resolution on being put to the meeting was carried —no one voting against it.

A resolution was subsequently put and carried to the effect that the Toronto Board of Trade be requested to enter into communication with the Boards in the principal cities of the Province, for the purpose of obtaining from the Dominion Government the enlargement of the Welland Canal.

COMMERCIAL BANK OF N. B.

The adjourned meeting of shareholders was held in St. John on the 5th. The Directors submitted the following supplementary report:

"The President and Directors of the Commercial Bank of New Brunswick beg leave to submit herewith to the stockholders a detailed statement of the assets and liabilities of the bank, prepared pursuant to the resolution adopted at the last meeting. In submitting this statement they have given such details as can, in their opinion, be at present submitted by them consistently with the interest of the stockholders and their own duties as Directors to the customers of the bank whose accounts are expressly protected by the Bank Charter. The Directors are unwilling, after mature consideration, to take upon themselves the responsibility of giving at present further details, and believe that to do so would prove most injurious to the Stockholders, but should it be the wish of the Stockholders that such details should be given, the present Directors are prepared cheerfully to retire in favor of such persons as shall be duly nominated by t Stockholders, from a position in which they ha no desire to continue except with the confide of those whose property they have to control."

The total liabilities as on 23rd Novem amounted to $630,958 85, and the assets to $76 671. The changes in assets and liabilities to January, were—

	Nov. 23.	Jan. 2.	Decrea
Circulation	$261,490 00	$131,020 00	$130,470
Bills discounted	269,932 00	162,239 00	107,693
Miramichi debt	100,000 00	53,311 00	46,689
Woodstock debt	60,000 00	57,999 00	2,001
Running acct	53,340 00	34,998 00	18,342
Other banks & agencies	193,709 00	139,021 00	54,688

The latter decrease is owing to the payment certain collaterals lodged before the suspension the Bank.

Deposits have increased	$31,491
Assets on hand, being part of amounts received from Miramichi, and on running accounts,	21,058

After the adoption of the report had be moved, Mr Reed, one of the new Directors, sai The figures showing the estimated surplus wa compromise of three several statements—(of them being made by Mr. Seeley and the Directors, and another by Mr. Jarvis, and third by myself, that the affairs of the bank we so far as it was possible under the circumstan to do, minutely gone into, and that each par estimated the realiable value of the various ite honestly to the best of their judgment and in mation. In very many instances our opinio differed as to the values, but the net results the several statements only varied a few thous dollars. The statement was got up in good fai and as the meeting was not a meeting of cre ors, and as the debts of the Bank must be pa it was deemed imprudent to expose the aff further than to assure you, over our signatures, the moral certainty that by judicious managem on the part of the Directors, and by forbeara on the part of the creditors that the assets wo not only, in our opinion, pay the liabilities, leave something to be divided amongst the Sto holders.

I consider it of the utmost importance t the Board of Directors, on whom at the exp tion of sixty days from the date of suspensi will fall the duty of winding up the affairs of Bank in accordance with the charter, shall h your entire confidence, because if they are supported by the Stockholders unanimou or nearly so, it will be impossible them to wind up the concern in the most adv tageous and economical way. Therefore the sing paragraph of the report puts the matte you fairly, and reduces the whole to the n question, have you confidence in the discreti the judgment and the honesty of purpose of present Directors, or have you not? If you h not, then we retire in favor of five gentlem qualified, who may be duly nominated by Stockholders to take our place.

Nearly all of you are in favor of the conc being wound up by the Directory, and not b Curator, The Central and Westmoreland Ba furnish illustratons of the two modes. The C tral was wound up under the Board of Direct the assets of which, not only paid the debts, a balance wrs left to be divided amongst Stockholders, whereas the Westmoreland be wound up by a Curator, under the direction the Supreme Court, the assets have been enti swamped, and a call of fifty per cent has alre been made upon the Stockholders, and I have very best authority for stating that another of a similar amount will shortly be made.

Mr. Milligan wanted to know where the $5 000 defieit above the losses by Sancton and Ja ley had gone to.

Mr. Kerr wished to see a more detailed settlement of the assets than had been presented. He believed the Bank had violated its charter by dealing so largely in real estate, by which means the working energies of the Bank had been crippled and brought to its present position. The mortgages instead of being permitted to lie over, should have been made available, and the property converted into a working medium. From the returns to the Legislature from 1852 to 1862 it would appear that the position of the Bank was good, when in reality amounts were put in as assets which were utterly worthless. The stockholders had never had an opportunity of seeing how the returns were made up, and had no information of the real situation of things. In 1862 Mr. McLaughlin and Mr. Sancton made oath to the Legislature, that the stock was full, and the assets all good, and yet before the annual meeting in May following, the Directors struck off £20,000 from the assets for which they gave no reason, and the stockholders could gain no information on the matter. With regard to the matter between him and Mr. Jack, he would now say that, although Mr. Jack had stated in the papers that he was not liable for the case he lost, yet that gentlemen had told Mr. Jarvis and Mr. Seely and himself, that Mr. Hazen was liable for that amount, and yet that £500 had been put into the bad debt list. The Bank, moreover, had in 1861 broken their own bye-laws, in handing £1500 over the counter to Mr. John Morrison the Bank taking mortgage on his Mill property at Fredericton, on which the Central Bank had a previous mortgage of £3500.

Mr. Parks explained that when he went to the Board, Mr. Morrison owed the Bank £25,000, all of which by great labors he had got covered, and then he told Mr. Morrison that all future accommodation must be done through the Board. He got leave of absence to go to Canada, and while he was gone the Board handed Morrison £1000.

Mr. Milligan spoke at some length on the departures from the terms of the Charter, and on the liability of the Directors as Trustees for the Stockholders.

Messrs. Reed and Jarvis were approved of to fill the vacancies at the Board, and the further consideration of the report was postponed till the second Tuesday in March.

—A meeting of the subscribers for stock in the Port Whitby and Port Perry Railway Company will be held in Whitby on the 27th of January, for the purpose of electing directors.

—The annual meeting of the shareholders of the Nova Scotia Marine Insurance Company will be held on the 18th January.

Insurance.

Fire Record.—Petrolia, Jan. 8.—A fire occurred here by which three houses were burned to the ground. That in which the fire originated belonged to Mr. Lloyd, and was occupied by Sidney Walters. It appears that Mrs. Walters made a fire in the stove after dinner, and went to a neighbor's house, intending to stay a short time ; and she was not long gone when the fire was discovered. The fire doubtless originated from the stove, but in what way, no one can tell, for when the the door was burst open, the whole house was in flames. Mr. Walters and his family lost all their clothing except what they had on, and all their furniture ; also $300 in bills. Mr. W. rushed in through the flames, and brought out a small trunk containing $100 in gold and silver ; and went back and brought out the stand, in the drawer of which was deposited the $300 in bills ; but by this time the top of the stand was burned through, and the money destroyed. Mr. Lloyd, the owner of the house, lost all his clothing ; $30 in cash ; and a gold watch worth about $50. Of the other two houses burned, one belonged to W. H. McGarvey, and was occupied by Michael Parker, but before the fire communicated to it, all the furniture, &c., was removed. The other house belonged to Mr. Wm. Dundas, of Enniskillen, and was occupied by Mr. John Hall, and its contents were likewise saved before the building itself caught fire. The loss, as far as the buildings are concerned, is complete, none of them having been insured ; nor was their any insurance on any portion of Mr. Walters' or Mr. Lloyd's goods.

Windsor, July 2.—A fire broke out in a stable in the east end of the town, owned by Henry Offitt and was burned to the ground, with all its contents, including four horses. Loss $700 ; insured for $500. The wind was blowing quite fresh at the time, and there being no water to supply the engine, the fire soon communicated to the building owned by P. T. Worthington, of London, and occupied by Rev. Hugh Johnston, and it being of wood, was soon so far in flames as to preclude any hope of saving it. Mr. Johnston lost a great deal of his clothing and many of his books by theft, and much of his furniture was badly damaged by hasty removal. The most of the loss will, however, be made good by the insurance on it. The house was fully insured. The cause of the fire is involved in mystery.

Egremont, Co. Grey, Dec. 31.—The store and dwelling house owned by John Hunt ; and occupied by Mrs. Jane Hunt, on the 14th concession of Egremont, was destroyed by fire. How the fire originated is not known. The total loss in goods, furniture, &c., will be about $1,500, and incudes $75 in cash, which was in one of the drawers. No insurance.

St. John, N. B.—Store of P. Connolly, on King street consumed, no particulars.

London, Jan. 7.—About eleven o'clock on Wednesday night a fire broke out in the tailors' department of Finlayson and Co.'s dry goods and clothing store, which threatened to destroy the principal part of the brick block on Dundas street, between Talbot and Richmond streets, the rear portions of the buildings where the fire originated being principally old wooden structures. By great exertions on the part of the fire brigade the fire was almost entirely confined to the premises which it broke out. The whole interior of Finlayson's including the stock is destroyed. The loss on stock is estimated at $23,000, $5,000 to 8,000 saved, insured for $16,000—$6,000 in the London Assurance ; $2,500 in the Ætna, of Hartford ; $2,500 in the North British Mercantile ; $5,000 in the Northern, of England. The store is owned by Mr. D. Stirling, of Hamilton, and is fully insured. The adjoining store, occupied by Westlake, dry goods, received considerable damage by smoke and water. The loss is fullly covered by an insurance settled for $1,000. Mr. Conachie's dry goods store on the other side also suffered loss through removal. It is insured and settled for $60.

Durham, Ont. Dec. 26.—The Carding Mill, Woollen Factory and Stockhouse, belonging to Peter Patterson, was destroyed by fire. Loss estimated at about $15,000. About $5,000 worth of cloth was destroyed, a portion of which belonged to customers, who will sadly miss the material intended for family wear. Insurance $2,000.

Montreal, Jan. 11th.—A fire broke out in a building situated on Wellington street, occupied as a farmers' tavern, by A. Ryan. The building is a brick one, covered with wood. One of the inmates, a German, who was sleeping in the upper story, was at one time in great danger, but through the praiseworthy exertions of Mr. Alfred Perry and the firemen, he was rescued and taken to the General Hospital in an insensible condition where he now lies in a very low state. The other inmates narrowly escaped uninjured. The loss on the building is about $5,000, insured in the Liverpool and London ; on the contents about $1400, insured in the Royal.

Smithtown, King's Co., N. B., Dec. 31.—The Carding, Fulling and Dyeing Mills of J. McC. Snow, were destroyed by fire. There was no insurance on the Mills, and Mr. Snow lost his books and papers, which were in his desk in the Mill at the time. A large quantity of Wool and Woollen Goods were also destroyed.

Lakelet, Co. Huron, Ont.—The house of Peter Neleny was burned down. The furniture was all saved. There was no insurance on the house, which was owned by R. Young.

Buctouche, N. B.—The dwelling-house and store of Mr. Alex. Johnson and the dwelling-house and store of Mr. John Keswick, both of Buctouche, were destroyed. The house of Mr. Keswick, in which the fire broke out was insured; Mr. Johnson was not insured, but he saved all his household effects.

Cobourg, January.—A fire occurred at Cobourg Station, G. T. R., by which about 400 cords of wood were burnt, the property of the railway company. A large steam sawing machine, owned by C. J. Starling, of Belleville, and which cost about $1,400 was almost completely destroyed.

Waterford, Jan. 12.—Last evening the barn and its contents belonging to Dr. Bowly was consumed. The fire was discovered about 8 P. M., and spread so rapidly that the effort to save anything was impossible. Four horses and two cows were in the building destroyed, together with a large amount of wheat. Loss about $2,500; partially covered by an insurance of $1,000 in the Waterloo Insurance Company.

Fires in Halifax.—There have been during the year 1868, in Halifax and vicinity, 49 fires and alarms, most of which have happened at night or between the hours of 6 p. m. and 6 a. m.

No. of actual fires in Halifax	26	
do. do. Dartmouth	1	27
No. of alarms in Halifax	21

The International Life Assurance.—The case of the International Life Assurance Society came before the Equity Courts od Wednesday, in a suit under a petition filed by a Mr. White, the holder of eighty-five shares, with £7 each paid, which, it appears from the evidence, he bought at an auction sale in Lothbury for the nominal sum of £11. The case was argued at great length, and Dr. Symes, the chairman of the International, and Mr. Shrubb, manager of the Hercules, were examined *viva voce*, before the court with a view of proving the inability of the Hercules to take over the transfer. The evidence went to show that the transfer was a valid one, and that the Hercules was a good and responsible company. It appeared also that £105,000 of mortgages, Government securities and other assets had been absolutely transferred to the Hercules in July last, and that about £15,000 in money had also been paid to them. It also appeared that more than 1,700 policyholders out of the 2,000 or thereabouts had actually accepted the Hercules in the place of the International, and had their policies transferred by endorsement or exchange. The Vice Chancellor gave judgment, the effect of which went to show that the petition must be dismissed unless a suit could be instituted by bill to assert the validity of the transfer-deed, which appeared from the tenor of his honor's remarks to be next to impossible.—*Investors' Guardian.*

Taxation on Insurance in Nova Scotia.—A correspondent writes to a Halifax paper as follows :—By the laws of our Province, we very properly provided, for the public security, that every company is obliged to make an annual return the first of each year, showing the amount of property insured—the gross amount of premiums charged thereon—with the net profits of the business for the year just finished ; and on this return the City Assessor makes up his annual assessment. Knowing there was a good deal of dissatisfaction at the manner in which this wholesome law had been disregarded, I have taken the

trouble to procure a correct statement up to the present time, which I must ask you kindly to publish with this, for the information of the general public, so that each man may form his own opinion, and judge for himself as to how many of the agencies comply with the requirements of the statute referred.

The agents of some of these companies have, as will be seen, generally complied with the law, and it is because there are others who have not, as well as in justice to those who do, that I have ventured to direct public attention to the matter. The statement also shows that the London and Liverpool, although doing a large business, made no general returns for 1867, and paid no taxes for 1867-68. The Royal, generally punctual, made returns, but paid no taxes either for current year. The Queen made no return for two years, and escaped taxes for 1868 and 1866 and 1878, and the London and Lancashire paid nothing for the current year, while at the same time, the Acadia and Halifax, doing a much smaller business, in consequence of being restricted by their charters, than most of the companies referred to, have, by a compliance with the laws of the land, which others have disregarded, taken a large amount annually from their shareholders to pay the city assessment made on their entirety, in consequence of their having made the necessary returns. My object now, Mr. Editor, is to inquire if this cannot and should not at once be looked into and remedied. If we have a law on our statute book requiring returns to be made under a penalty of $20 per month, whether some steps should not be at once taken to bring these refractory agents to book. It is manifestly unfair that foreign Companies should escape taxation, while the local ones, doing a much smaller amount of business, are called upon to contribute so largely to the city funds. I hope the Attorney General may consider it his duty to take the matter in hand, as he will find, if he looks sharply after it, that a very considerable amount in the shape of penalties may now be recovered, which, in the present impoverished condition of the Provincial Treasury, would, I presume, be very acceptable.

—A curious "accident insurance" case has just been decided in Chicago. A fireman insured for $2,000 in the Travellers' Insurance Company, was so injured at a fire that he afterward became delirious. During his delirium he took poison and died. The company provides in its policies that nothing can be collected in case of suicide, whether the party be sane or insane when the act is committed. The insurance in this case was claimed on the ground that the real cause of death was the accident which produced the fireman's insanity. The court decided that the direct and not the remote chance of death was the one insured against.

Hartford Fire Insurance Companies.—The following is a statement of the assets of the Hartford Fire Insurance Companies, January 1, 1869:

	Capital.	Surplus.	Total Assets.
Ætna	$3,000,000	$2,150,931.71	$5,150,931.71
Hartford	1,000,000	1,113,556.22	2,113,556.22
Phœnix	600,000	867,835.60	1,467,835.60
North American	300,000	149,859.65	449,859.65
Merchants'	200,000	246,000.00	446,000.00
Connecticut	200,000	142,613.59	342,613.59
City Fire	250,000	250,000.00	500,000.00
Putnam	400,000	150,000.00	550,000.00
Charter Oak	150,000	75,000.00	225,000.00
	$7,500,000	$5,145,796.68	$11,245,796.68

The Ætna has $289,553.98 of outstanding losses unpaid; the Phœnix, $131,970.62, and the Hartford about $100,000. The remainder have net assets as above. Dividends have been declared during the year as follows:

Ætna	16 per cent.	$480,000
Hartford	16 "	160,000
Phœnix	16 "	96,000
North American	12 "	36,000
Merchants'	12 "	24,000
Connecticut	12 "	24,000
City Fire	12 "	30,000
Charter Oak	10 "	15,000
Total		$865,000

Ocean Marine Losses in 1868.—The following capitulation shows the number of vessels lost during each month of 1868, and their estimated value:

Months.	*No. of Vessels.*	*Value.*
January	38	$1,141,000
February	33	930,000
March	44	1,158,000
April	41	800,000
May	23	640,000
June	19	560,000
July	14	185,000
August	31	598,000
September	26	582,000
October	25	587,000
November	27	890,000
December	41	992,000
Total	362	$10,030,000

The St. Stephens Branch Railway, N. B. has been doing a prosperous business during the past season. The receipts for the year ending 31st Dec., 1868, are $110,000, while those of the year previous only amounted to $79,000. The up freights still continue good, as the lumber operators and St. John River merchants use this road to forward supplies. The down freight is now very small as the St. Croix is closed and it is difficult to ship lumber.

THE SHERBROOKE AND EASTERN TOWNSHIPS RAILWAY.

Mr. R. Oughtred who was engaged in the preliminary survey to Westbury, for the proposed Wooden Railway from this place to Weedon reported to the Town Council, the result of his explorations, from which we make a few extracts:

He says, the first two and three quarter miles from the Grand Trunk Depot, can be graded to about 80 feet to the mile, but will be very expensive on account of the long deep cut required through the high bank on the easterly side of the St. Francis. If, however, the Railway was to start at or near the top of the bank of the river the grade would be easy and the expense only ordinary. For the next two and a half miles there is a descent of about 124 feet, and can be graded to 50 feet per mile, the first mile and a half rather expensive, the ground being ledgy and broken, the remaining mile of the section being very easy to make. For the next section of three and a half miles there is a rise in the whole distance of about 49 feet and will only require a road bed to be built, no cutting or filling being necessary. For the next section of one and three quarter miles the grade descends in that direction 53 feet, and will only require a road bed, with no cutting or filling. The next section on the Winslow brook of about half a mile can easily be graded to about 40 feet per mile at ordinary expense by descending gradually down the slope to the banks of said brook and bank of the River St. Francis for about a mile and a quarter from the beginning of the last mentioned section. The whole distance, surveyed and levelled, being about eleven miles from Sherbrooke. The route on the whole is more favorable than Mr. Oughtred or any one else expected, as to the grade, and can be shortened a good deal if more expense is incurred in cutting off some small angles and fill up some small hollows.

The route thus established will be seen to be favorable to laying down by and by iron rails instead of wood, and in the whole distance surveyed the principal expense will be in the grading for iron rails the first three or three and a half miles. At first for the wooden rails the great part of this expense need not be incurred, and the wooden track can be used for doing the extra grading required, whenever the business of the road calls for iron instead of wood rails. Owing to the great depth of snow it is not thought advisible to continue the survey further at present, nor is it necessary, as it is known no impediments exist up the St. Francis beyond the point now reached, the supposed difficulties being to get from the Grand Trunk Depot across the height of land on the east side of the St. Francis. It is now demonstrated that these difficulties were more imaginary than real, and can be easily overcome. It might be well for the inhabitants in Dudswell, Weedon and other Townships interested to get up petitions to Parliament in favor of the charter being granted. We may add that the proposed line goes into the Township of Stoke in two places and if finally established it will be of great advantage to the settlers there, and tend to induce others to locate in that township, a thing much to be desired. It will also be of great service to this Town in opening up land from which great quantities of fire wood can be brought by the Railway at small expense.—*Sherbrooke Gazette.*

A NEW RAILWAY PROJECT IN NOVA SCOTIA.

It is proposed to extend the railway now in course of construction between Windsor and Annapolis, to Yarmouth in the western part of the Province. Windsor is already connected with Halifax by rail, and the line from Windsor to Annapolis will doubtless be completed next summer. The distance from Halifax to Annapolis by this route is 130 miles, and it is computed that about 70 miles of rail will connect Annapolis and Yarmouth—making the whole distance from the latter place to Halifax about 200 miles. It is claimed for this route that, besides giving Western Nova Scotia railway connection with Halifax, it will afford a direct route for through travel to the West. The distance from Halifax to Yarmouth could be made by train in ten hours, and it is asserted that steamers could make the trip from Yarmouth to Portland in twelve hours—the distance being but 170 miles. This would enable the people of Halifax to reach the eastern terminus of the Grand Trunk within twenty-four hours—saving, at least, twelve hours, as compared with either of the existing routes:

The Goverument at Halifax have promised to put into their next estimates an appropriation of $2,000 for the survey of the route from Annapolis to Yarmouth. Mr. Sandford Fleming has, with the consent of the authorities at Ottawa, undertaken to make the survey for the money, and thinks such a survey may be made by March next.

—Notice is given that application will be made to the Legislature of Ontario, during the present session, for an Act to revive the charter of the Hamilton and Port Dover Railway Company, for the limited purpose of realizing their assets to pay debts.

—Proprietors of shares in the capital stock of the Ottawa City Railway Passenger Company are to pay a further call of 50 per cent. on the subscribed stock, at the Ontario Bank, before the 1st day of February.

Enterprise in Quebec.—Progress is the order of the day in Quebec as well as in Ontario, New Brunswick and Nova Scotia.

L'Evenement asserts that a company is now in process of formation with the object of building a narrow guage railway from Point Levis to the Maine frontier, passing through the counties of Levis, Dorchester and Beauce, a route which would place the American terminus of the road near the headwaters of that old entrance to Canada, the Kennebec. It also states that the success of the enterprise is assured owing to the influential political men and wealthy capitalists who are at its head. Are the Halls, Forsyths, Chauveaus, Blanchets, Cauchons, etc., of the ancient capital seeking for a short outlet to the United States seaboard and a market for Quebec manufactured lumber? Time will tell.

The first actual year under Confederation has, to say the least, witnessed a great advance in the industrial enterprise of this Province. Among the greater and lesser works projected, most of which will eventuate into realities, a retrospective glance will disclose the following: 1. The St. Louis Hydraulic Company, a scheme designed to utilize about ten million horse-power now literally going to waste at our very doors, and calculated, with enterprise and good management, to make Montreal the greatest manufacturing centre on this continent. 2. The extension of the Massawippi, a work which will give Montreal and Quebec another almost direct route to Boston. 3. The extension of the Stanstead and Shefford Railway to Chambly and thence, ultimately to Longeuil, opposite Montreal, an extension which, when completed, will still further shorten the route to the seaboard. 4. Construction of a railway through the county of Missisquoi, giving many of the Eastern townships' farmers and traders direct access to New York, Boston and Montreal. 5. Wooden railway from Quebec to the township of Gosford, opening up the country to the northward for settlement, and furnishing a cheap and almost inexhaustible supply of firewood to the people of Quebec city and vicinity. 6. Wooden railway through the counties of Drummond and Arthabaska, opening portions of them up for settlement, and giving access to the St. Lawrence, Richmond and Sherbrooke. 7. Wooden railway along the valley of the St. Francis. 8. Wooden railway from Montreal to St. Jerome, and thence north, if we please, to the Pole, opening up an enormous district for colonization, and providing an inexhaustible supply of cheap firewood. 9. Revival of the Piles railway project, a scheme intended to give the settlers access to the Upper St. Maurice, and provide an outlet for the valuable lumber of that equally enormous valley. 10. Proposed canal between the rivers rivers Richlieu and Yamaska. 11. Proposed narrow gauge railroad between the St. Lawrence and the head waters of the Kennebec. Many other projects were mooted, but the above list comprises the principal ones—half of which, we confidently repeat, will begin to bear fruit before the present year has expired. Who can say, in view of the above array of intelligent, well-grounded schemes for the development of the resources of the Province of Quebec, that it has not prospered, or will not prosper under Confederation?

Ashbridge's Bay Canal.—A scheme to open a harbour at Leslieville has been started by the inhabitants of the locality, and notice has been given of a bill to sanction the project. The object designed in the construction is, to become independent of the local market for fuel; and, with the canal constructed, wood can be brought in at a much less cost to the inhabitants than at present. It is computed that the parties who would benefit, use at least 7,000 cords per annum; and a very small amount on the total cost of that quantity of fuel would construct the canal. Besides, there are large quantities of lime, plaster and other articles imported, which could be cheapened in cost of carriage by the proposed canal. Its length is estimated at about a mile, and it will strike across the bar a short distance east of Mr. Leslie's nurseries, near Toronto.

—The Lieutenant Governor of Ontario has authorized the issue of letters patent, incorporating the "Church Printing and Publishing Company," with a head office at Toronto or Hamilton, and with power to establish agencies in other cities and towns. Nomiual capital $6,000.

—Some enterprising country projectors speak of making a canal between St. Hyacinthe and St. Charles, so as to connect the Richelieu with the Yamaska—a distance of about thirteen miles. This would enable the people of St. Hyacinthe to get access to the St. Lawrence at Sorel, and thereby shorten the water way to Montreal.

New Insolvents.—The following new insolvents were gazetted on Saturday, the 9th inst.: Paul Tawrin, parish of Montreal; Joseph Nodeur, township of Stanfold; F. D. Cummer, Toronto; Lewis T. Cole, Napanee; David Dean, Bayham; Timothy McCarthy, Bayham; Guelph Packing Company, Guelph; Robert Armstrong, Ailsa Craig; N. Loubert, St. Johns; Thomas Robinson, Esquesing; Joseph Mann, London; P. O'Brien, Belleville; D. L. Carscallen, Belleville; James Flynn, Orangeville; John Wylie, Iroquois; M. Findley, Ingersoll; Wm. Gilmore; Toronto; Grant & Henderson, Ottawa; Donald Matheson, Toronto; A. T. Boucher, Montreal; William Riddle, London; D. D. Chesbro, Belleville; John Clements, Berthier; Edward Ward White, Kingston; Edward Wilmot, Kingston; Thomas Coe, Ashburnham; Monteeth, London; L. P. Profontaine, Bolocial, Buckland, Howell & Co., Montreal.

THE MUNICIPAL LOAN FUND.

It appears that the municipalities of the Province of Ontario borrowed from the Government, under the Municipal Loan Fund Act, $7,300,000. Of this amount, $5,867,400 were spent on railways, and $1,482,600 on local improvements. Of the entire amount invested in railways $3,229,400 was by way of loan and $2,638,000 in stock.

THURSDAY, JANUARY 14, 1869.

THE HURON AND ONTARIO SHIP CANAL.

The agitation raised by the Huron and Ontario Ship Canal Company respecting the non-reception, by the Ontario Legislature, of the petitions asking a grant of 10,000,000 acres of land in aid of the proposed scheme to connect lakes Huron and Ontario by a canal, calls for an examination of the grounds of such refusal. Ten millions of acres make, certainly, a large tract of country. One can understand what the expression means when we call to mind that there were in 1863 only a little over six million acres under cultivation in the province of Ontario. It means a tract of country equal, according to the number of acres assessed in 1866, to the counties of Huron, Bruce, Simcoe, Grey, Wellington, York, Peel, Elgin, Haldimand, Halton, Kent, Lambton, Middlesex, Norfolk, Waterloo, Wentworth, Oxford and Ontario—eighteen counties, the largest in the Province of Ontario—put together. Our experience of land monopolies in this country has been not such as to cause the creation of a new one to be viewed with popular favour; and any scheme which demands the donation of so much territory as that we have indicated must present extraordinary inducements before the Canadian people will consent to assist it in such a way. It is all very well to say that the land the Company would accept is of no value. If such be the case we should be lending ourselves to a fraud in tempting men to invest their means by pretending to give them something substantial when what we give is, in reality, of no value. If the land is sufficient in value to induce those to whom it would be given to invest $40,000,000 in a canal, then the question arises, Are we making the best of it?

The proposed canal would connect Lake Ontario (234 feet above the sea) with Lake Huron (574 feet above the sea), and have Lake Simcoe (704 feet above the sea) for its summit level and feeder. The estimated length is 100 miles, of which 24 miles are deep water navigation through Lake Simcoe, and 16 miles slack water navigation, there being 60 miles of canal proper, of which 30 miles would be summit level, and 30 miles interrupted by lockage. The total lockage is placed at 600 feet. The number of locks is 42. The width of the canal would be 100 feet at the water suface, and 80 feet in the bottom, and its depth 13 feet. The time required for passing through the canal is computed at 42 hours, thus:—

24 miles	Lake navigation at 8 miles per hour...	3
52¼ "	River and Canal, long reaches 3½ m.p.h.	15
20 "	" " short " 2 " "	10
3½ "	42 locks, at 20 minutes each..	14
	Total.....	42

The estimated cost of all the works is $36,000,000, to which must be added the interest on expenditure during construction, which, together, would absorb the capital of $40,000,000.

The following advantages are claimed for the canal by its promoters:

1. The intricacies and dangers of the shoals and flats of Lakes Erie and St. Clair avoided, and a saving of about 500 miles affected.

2. Cargoes of 1000 or 1200 tons may be taken from Chicago, or other Lake ports, to tide water, or across the Atlantic, without transhipment.

3. Instead of 350 miles distance, and 14 days of time, on the warm and shallow water of the Erie Canal (exposing grain to risk of heating), the Huron and Ontario Canal and the St. Lawrence Canals, together, will have only 120 miles of length, with 14 feet of water, the rest of the navigation being equal to any in the world.

4. Quebec being 500 miles nearer than New York to Liverpool, there will be a saving of that distance in the sea voyage.

5. A cargo of 1,000 or 1,200 tons shipped at Chicago for Liverpool, *via* H. & O. Canal, would under ordinary circumstances, and whether transhipped at Quebec or not, reach Liverpool before another cargo shipped at same time, *via* Buffalo and Erie Canal, could reach New York.

6. With the advantages of the great saving of time and distance, and the passage of large cargoes without transhipment, the transportation charges as well between Chicago and Oswego as between Chicago and Liverpool, may be reduced nearly 50 per cent.

It is assumed that at least 5,275,000 tons of freight between the West and the East would be commanded by the canal, yielding 80 cents per gross ton.

The advantages claimed as likely to accrue to this Province are "the creation of an almost unlimited water power along the first 24 miles of the canal," the expenditure of large sums of money, and the employment of a large amount of labor, the stimulation of ship building and the trade in ship-chandlery, and the developement of the vast and rich region west of Georgian Bay. As a national work, it is considered that it would supply the population of Great Britain with breadstuffs at a reduced rate, and constitute a powerful bond of peace with the United States.

The question to be decided by the people of Ontario is not whether the canal can be constructed—the Company's Engineers have answered that affirmatively—or whether, if constructed, would it pay dividends to the Stockholders in the Company—the Company must satisfy themselves on that,—but rather, Would the advantages to accrue to Ontario from the construction of the canal be equal to the advantages that might be secured from the giving of 10,000,000 acres of land, if they are to be given away, to aid other enterprises such as railroads, which would assuredly benefit our own country directly and immediately? Would we derive greater benefit from building a canal by which the so-called "starving masses" in Europe might, or might not, get their bread cheaper than they do now, than we would by building railways and opening up new and fertile districts by which these "starving masses" might be induced to come here and feed themselves? A capacious mouth and a willing pair of hands in Canada are worth more to us than a great many mouths and hands in Europe. We consider, therefore, that Mr. Laidlaw has hit upon the true answer to those who ask us to lavish our means upon a canal, when the same assistance would build several railways and open up millions of acres to cultivation and settlement. But it may be said, let us do both; let us build canals and railways also. Very well. With all due deference to the energetic promoters of the canal scheme we assert that railways are entitled to precedence. If ten millions of acres are a sufficient inducement to the investment of forty millions of dollars in a canal, and our canals have not paid one and a half per cent. on their cost they should be a powerful temptation to capitalists to build a good many railways for us and that, too, through these very lands.

We need not be in too great a hurry with this canal project. The canal, if built, might be, (which is disputed) of great service to Chicago and the Western States. But in the present state of affairs, it would be of little use to us Canadians. Our American neigh

urs shew little consideration for our inter- s in imposing a high tariff on everything sell to them. In a previous number of s journal (No. 7—Vol. 2) we pointed out e outrageous treatment our Canadian ma- e receives at the hands of American legis- lors, and American Custom-house officials. ey use every means to destroy our carrying de. They won't allow our vessels to enter y American inland stream or canal ; they n't even allow a Canadian steamer to go to American side of the St. Clair river to e in tow an American vessel ; they have nopolized all the ferries, by making it cessary for a Canadian ferry boat to enter l clear every time she touches an Ameri- landing; they won't allow a Canadian to command an American vessel, or to be an gineer on one; they won't allow a Canadian sel to touch at any American port without yment of tonnage dues and a charge for arance ; they wont allow our vessels to rticipate in their coasting trade at all ; and ally, they won't allow a Canadian vessel carry grain from any American port to a adian port.

What is the proclaimed object of the ron and Ontario Ship Canal? Why, to ord an additional outlet "to the teeming ducts of the great west"; in fact, to bene- fi Chicago and the Western States. Who is to have the carrying trade? Assuredly not Canadians, for our friends across the lines w't allow our vessels to carry grain from o American port to another. It is not pleasant to think of giving 10,000,000 acres land to build a canal which we could not n. They would exclude us from their als and prevent us from using our own. Under such circumstances, we say, we are n likely to give away large blocks of our tory for their benefit, and we can afford wait until they manifest a more friendly it to us, in the meantime using our re- rces for our own benefit. Charity begins a home.

FLOUR AND GRAIN TRADE OF 1868.

The trade in the natural products of the soil a climate is primarily deserving of atten- n, in that it forms the basis of operations every branch of business. The importer a the manufacturer frame their estimates o sales and purchases with an eye chiefly to th prosperity of agriculture ; this is the ba- meter which unfailingly indicates the future o the commercial horizon. Such being well erstood principles, the deductions of obser- on and experience, we need not explain th great consequence to the whole country, a every individual interest in it, of the trade in the great agricultural staples of Canada—breadstuffs and grain.

In Ontario a good crop of wheat was gathered in last harvest. Fall sown was unusually favorable, and Spring did very well, taken as a whole, though the uncommonly dry summer weather ruined it in many localities, especially the late sown. The year opened with high prices, but the prolific production of nature was an overmatch for the resources of speculators, and the demands of consumers, so that a fall came—"and what a falling off was there!" Fall wheat sold in April last at $1 85, and in December at $1 10, for the same quality of sample—75 cents down ; Spring was worth $1 65 on the first of April, and slipped down to $1 02 ; No. 1 superfine flour was worth $7 15 per barrel on the 1st. of August, and by the end of December sold for $4 50. Such a reduction in values, as may be supposed, kept millers and dealers at their wits end to keep from making ruinous losses—the *profits* of the grain, wheat and flour trade are very little talked of.

The movement through the Toronto warehouses is shown by the following figures :—

1868.	Fall Wheat.	Spring Wheat.
Receipts, bush..	252,589	364,174
Shipments, bush.....	249,191	854,523
1867.		
Receipts, bush.....	268,116	485,983
Shipments, bush.....	302,152	478,435
1866.		
Receipts, bush...	534,272	463,197
Shipments, bush.....	529,027	406,907
1865.		
Receipts, bush.....	687,688	338,000
Shipments, bush.....	586,904	358,000

It should be explained that the circumstances of the trade, within a few years, are such as induce a reduction, rather than an increase, in the receipts of wheat, at Toronto. Since our flour trade with the Lower Provinces was established in its present magnificent proportions, our milling interests have been more prosperous, and a great portion of our wheat, which passed through the city warehouses, and was shipped to American markets, there to be ground and mixed with their own wheat, of an inferior quality, and the product shipped to the Provinces, is now converted into flour at the mills along our lines of railway, and shipped direct to the Maratime markets. In other words the flour trade has increased partly at the expense of the wheat trade. The shipments to Montreal, and the lower ports, were 184,770 bush. and 409,944 to Oswego and other American markets.

The movement in wheat in Montreal, in 1868, appears by the following statement :—

	1867.	1868.
Receipts, bush.....	2,426,822	2,831,667
Shipments, bush.....	1,141,673	1,575,346

Our flour trade with the Maratine ports has become of great service to the territory tributary to Toronto. A half dozen firms—Messrs. Howland, W. D. Matthews, & Co., Gibbs & Bro., of Oshawa; T. C. Chisholm, Gooderham & Worts, and W. Marshall, of Stratford ; sent forward not less than200,-000 brls. to those markets. It is very interesting to notice the way in which thetrade with St. John has been transferred from American to Canadian hands, since the demolition of the tariffs, and the establishment of closer political relations A statement of receipts of flour at St. John for several years is :

1865.		
Total Flour received from the United States, barrels.....	205,373	
Do. do. from Canada.....	28,000	
		233,373
1866.		
Total Flour received from the United States, barrels..... ...	89,915	
Do. do. from Canada.....	144,399	
		234,314
1867.		
Total Flour received from the United States, barrels.....	32,000	
Do. do. from Canada.....	220.000	
		252,000
1868.		
Total Flour received from the United States, barrels.....	55,000	
Do. do. from Canada.....	234,000	
		259,000

The movement of flour at the Toronto warehouses is shewn by the following statement of receipts and shipments for the years named :

	Receipts.	Shipments.
1868.—Barrels.....	56,120	51,930
1867.—Barrels.....	66,793	61,891
1866.—Barrels.....	125,089	108,852
1865.—Barrels.....	61,197	57,761

To the above receipts should be added about 50,000 barrels each year, being the estimated consumption of the city annually ; it need scarcely be added that these figures convey no approximate idea of the quantities handled by our dealers.

Receipts and shipments of flour at Montreal during the years named were

	1867.	1868.
Receipts, barrels.....	643,154	789,041
Shipments, barrels.....	561,047	510,847

The barley trade ranks next in importance. About 4,000,000 of bushels are estimated to have been produced in Ontario in 1868, yielding producers about $5,000,000. The dry weather greatly lessened our crop, but high prices more than compensated. The trade of the port of Toronto for several years is shown as follows :—

	Receipts.	Shipments.
1868.—Bushels.....	988,410	895,330
1867.—Bushels..... ..	1,225,455	943,303
1866.—Bushels..... ...	1,278,767	1,247,798
1865.—Bushels.....	1,197,126	1,187,626

The receipts of barley at Oswego, from Canada, in the years named, were

Receipts at Oswego in	1865.....bu.	2,992,432
" "	1866.....	4,094,889
" "	1867.....	2,528,447
" "	1868.....	2,031,385

To show the American ports to which our shipments go, we give the following statement of the receipts of barley from Ontario at the lake ports named, during 1868:—

Chicago, bush	92,017
Milwaukee, bush	15,013
Detroit, bush	113,060
Toledo, bush	593,227
Cleveland, bush	194,851
Buffalo, bush	544,195
Oswego, bush	2,031,385
Cape Vincent, bush	50,800
Ogdensburgh, bush	54,293
	3,578,841
Deduct Canada barley shipped from Oswego to western lake ports	79,184
Total receipts at above named ports	3,499,707

The market opened on the 13th of August, fully three weeks earlier than the average date of previous seasons. Beginning at 95 to 97c., and advancing to $1 50 in the middle of November, it closed at $1 25 to $1 30. Large profits were made by every one who handled the crop.

It is supposed that prices were greatly influenced, if not controlled, by a ring of speculators on both sides of the lakes, and the sudden drop in the early part of November is attributed to a breaking up of this organization by a severe monetary pressure. If a ring existed, its operations were carried on with unusual prudence and secrecy, and was managed by those who understood better the prospective requirements of the market than the great majority of dealers.

The whole course of the market is most extraordinary, and tends to enhance the great relative importance that this crop has assumed among the cereal products of Canada.

Communications.

GEORGIAN BAY CANAL.

Editor Canadian Monetary Times.

SIR,—The state of international law between the United States and Canada prevents Canadian ship owners from carrying wheat or other cargo from Chicago or any other United States port through the *Welland Canal*, Oswego, or other American port. Worse yet! If a cargo arrives in a Canadian bottom, at Port Colborne, and transhipped by rail or canal to Port Dalhousie? *No Canadian vessel is permitted* by the United States Government to carry such cargo to Oswego or other American port!

No Canadian bottom would be allowed to carry produce from an American to an American port *through the Georgian Bay Canal* if it was now ready for work.

Shall we, therefore, give ten million acres of land to build canals for the sole benefit of a people who will not allow us to carry *their trade through our own Canals with our own vessels?*

Before the Welland Canal is enlarged, or any other proposed, a treaty should be made, securing to Canadian, equal rights with American vessels in the upper lake carrying trade.

Much cannot be expected from a people who strain their construction of international coasting laws to such an extent as to declare it coasting for a *British vessel* to carry a cargo from New York, round Cape Horn, to San Francisco!

Pretty fellows they are, for which to ruin our kindred in building canals! England allows American vessels to carry coals from Newcastle to London or other British ports.

The Huron and Ontario Canal Company having absurdly proposed to commence a ship canal in *the middle* of our inland system of navigation, discovered, (when taught), the uselessness of their proposed work, unless the St. Lawrence canals were deepened and enlarged to correspond with the size of their proposed canal. I understood that the liberal leaders at the inception of Confederation, stipulated for the enlargement of the canals, and suppose the Dominion Government have, in consequence, a canal policy, to be developed after the Intercolonial Railway is built, or building.

If, however, the Huron and Ontario Canal Company assume the functions of the Dominion Government, and make the "enlargement of the St. Lawrence Canal part and parcel of their *'little business'* no doubt, although the enlargement is not necessary, it will be done forthwith.

Vessels of 500 tons could come to Montreal one hundred years ago. The mere deepening of the Clyde for a short distance has cost I believe over $10,000,000. The unnecessary deepening of the St. Lawrence and the Canals, to carry ocean vessels of 1,000 tons, would cost thirty or forty millions of dollars—the bed of the river and canals being mainly rock.

How much did the dredging of a channel through the mud of Lake St. Peter cost? Chicago harbor might be deepened; but all the harbors of refuge would also need to be deepened.

WATER SUPPLY.

The only stream running out of Lake Simcoe is the Severn, which, therefore, represents the surplus water of that lake. Its volume being a great deal less than that of the Grand river, which does not suffice to supply the small locks of the Welland Canal; how, therefore, with double-sized locks are the *two canals* from Lake Simcoe, one to the Georgian Bay and the other to Lake Ontario, to be supplied with water? By hydraulic power! The Severn after leaving Lake Simcoe, or rather the arm of it, Lake Couchiching, receives many large affluents, one about as large as itself; yet in summer, when canals are required, these combined waters are barely sufficient to drive a couple of saw mills.

Some gain would accrue from the canal, if built, to the farmers of the county of Simcoe, and such business places as Newmarket, Bradford, Barrie, &c.; these places gaining what Toronto would lose, but at a cost unworthy of a moment's consideration.

Is it supposed by citizens of Toronto advocating the canal that vessels would load lumber and wheat at Barrie, for instance, and bring their cargoes to Toronto, discharge and reload again? No! Vessels would clear from Newmarket, Barrie, &c., for Oswego and Montreal, as they now do from St. Catharines or Thorold and would load back from Oswego and Montreal, to these places instead of loading for Toronto.

Toronto would, therefore, be *stripped of the whole Northern trade* by the very men and means employed to enhance its prosperity.

Does the state of the Welland Railway, alongside the Welland Canal, foreshadow the fate of the Northern Railway, with a canal as its rival!

I am, Sir,
Your obed't serv't,
G. LAIDLAW.

SALT.—Goderich salt is beginning to assume a much more prominent position in our market; the demand is increasing. We quote Goderich salt $1.65, American do. $1.50, Liverpool coarse, bag $1.30, do. fine do. $1.40.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The improvement in stocks noticed in our report has been well maintained; the business done this week has been large and at advancing rates.

Bank Stock—Several sales of Montreal occur at 138 to 138½; at the latter rate the market closing firm, with a good demand at 138½. There have been no late transactions in British. Sales of Ontario occurred at 100, 100¼ and 100½ and closed firm at the latter rate. No Toronto market. There are no buyers of Royal Canada over 84; sellers ask 86. Large sales of Commerce occurred at 101½ and 102; there are now buyers and sellers at the latter rate. Buyers offer 35 Gore; no sellers under 39. Merchants has been sold for 105 and 105½; small lots are now offered at 106. Buyers offer 110 for Molson's, sellers at 110½. Sales of City occurred at 100 and 101; there are no sellers now under 101. Buyers offer 108 freely for Du Peuple; no sellers. There are sellers of National at 106½ and buyers at 105. Jacques Cartier is not procurable under 108; buyers generally offer 107. Other banks nominal.

Debentures—There have been no debentures in the market for some time; buyers would advance on quotations. Sales of Toronto occurred at 100 to pay 6¾ per cent. interest. County are in good demand, and there were buyers at high rates.

Sundries—107 would readily be paid for Gas. there has been no stock in market for some months. Sales of Canada Permanent Building Society occurred at 120½, 121, 121½ and closing firm at the latter price. No Western Canada in market; buyers offer 114 without attracting sellers. There are buyers of Freehold 105½; no sellers. Buyers would pay 133 for Montreal Telegraph, ex dividend; no sales. Sales Canada Landed Credit occurred at 71½ and and there are buyers at the latter rate. Mortgages are readily sold to pay 8 per cent. interest. Money is very plentiful on good security.

U. S. NATIONAL BANKS.—The United States Comptroller of the Currency reports that the six of the National Banks are in voluntary liquidation, and fifteen have failed during the year. The aggregate capital of the 1629 National Banks in operation on 30th September, 1868 was $426,189,111, an average of $261,000 to each. The taxes paid by them to government equal to 4.332 per cent. The Comptroller recommends the general redeeming agency at New York for the whole National Banks in operation, in lieu of the nineteen cities at present.

GORE BANK.—Notice is given that application will be made to the Parliament of the Dominion next session for an Act to amend the charter of the Gore Bank by reducing the capital stock from fully paid up, from $40 to $24 each, and by increasing the number of shares requisite for the qualification of its directors, and by authorizing the issue of new shares to an amount which together with the amount of share capital not issued when so reduced will make the capital of the Bank amount to one million dollars, and by changing the time now fixed for holding the annual meeting of shareholders.

DOMINION REVENUE AND EXPENDITURE FOR DECEMBER. — Revenue — Customs, $479,3[illegible] excise, $272,292.34; postoffice, $19,890.76; stamps, $5,480.60; public works, including railways, $85,551.49; miscellaneous, $140,0[illegible] total, $1,002,610.33. Expenditure, $956,7[illegible]

—The barque Grace E. Cram, which arrived at Winterport, Me., a few days since, brought 1,000 tons of rails for the European and North American Railroad. About 500 tons will be landed at Bangor for immediate use.

BANK OF ENGLAND.

	Dec. 24, 1868.	Dec. 27, 1867.
nk rate of discount	3 per cent.	2 per cent.
nk reserve.....	£10,433,640	£13,578,182
nk stock of bullion	18,158,315	21,941,047
ice of Consols.....	92⅜ x d	92¼ x d

As usual just before the close of the year more nand for money has been experienced this ek, and in the open market 2⅞ per cent. is paid the best three months paper. Some tightness the market will probably be experienced next ek. On the Stock Exchange the rate for ad- nces on British Government securities is 2 to per cent.

BANKING IN FRANCE.

The first bank of circulation in France was ablished by John Law, a Scotchman, who in 16 obtained from the Duke of Orleans, the n Regent, the privilege of establishing a eneral bank" to receive deposits, discount com- rcial paper, and issue bills payable to bearer demand. In spite of the very small capital ch which it was started, its beginnings were tunate; but the visionary theories of its nder, and the passions of a necessitous and scrupulous government, plunged it into specu- ions which speedily occasioned its downfall. ter only four years of existence, it was com- led to suspend operations. Fifty years elapsed ore any further attempt was made to establish ank of circulation in France. In 1776, under ministry of Turgot, a bank of discount was ablished at Paris. Its original capital was y seven and a half million of francs, con- buted by its shareholders. In 1779, by an der in council, its capital was increased to elve millions. The rate of discount was fixed four per cent. on bills of exchange having two three months to run. Shortly afterward it ued bank bills, and by this means doubled its ital. In consideration of its public utility, institution was authorized, by an order in ncil of November 28, 1781, to assume a coat arms, which should serve both as a seal for the k and an official stamp for its stock certifi- es. Such was the activity it imparted to the culation during the war which ended in 1783, t in the opinion of the most enlightened mer- nts of the time, commerce could not have plied itself with silver, even at the rate of six cent., which was the uniform rate which it mauded during the latter years of the war. t during the revolution which ensued, the em- rassments of the bank were so great that it was pressed in March, 1793, by a decree of the nvention. Various associations were subse- ently formed at Paris for carrying on the dis- nt business, the most distinguished of which s the "Caisse des Comptes Courants," or bank current accounts, which was founded in 1800, t was almost immediately afterward merged in e Bank of France.

By the law of April 14, 1803, the monopoly of bank was declared, and the other establish- nts of like character, of which the "Comptoir mmercial" was the most important, either sed up or were united with it. The same law thorized it to issue bills, payable to bearer on mand, of the denominations of 500 and 1,000 nes. By the law of March 25, 1841, issues of 0 francs were authorized; by that of June 10, 48, of 200 francs; and by that of March, 1848, 100 francs.

By the provisions of articles ten and eleven of act of April 14, 1803, the whole body of ckholders is represented at the annual meeting the two hundred of them holding the largest mber of shares; but each of these representa- es has only one vote, whatever may be the mber of shares which he holds.

The chief direction of the bank is intrusted to Governor and two Deputy Governors, who are appointed by the executive government of the empire; and to fifteen regents and three censors apaointed by the shareholders in general meeting. The management of funds, amounting annually to eight thousand million francs ($1,600,000,000), is therefore directed by these twenty-one functionaries. On the 31st of December, 1866, the number of chief managers, directors of branches, managers, clerks, and inferior agents, was 1,193, of whom 574 were at Paris, and 619 at the branches.

The original capital was thirty millions of francs. The surplus fund having been used to purchase shares of the bank, its capital, in 1812, had been reduced to 67,900,000 francs, by the cancellation of 22,100 shares. It remained at this figure till 1848. On the 1st of January, 1849, the capital was increased by the addition of twenty-three and a half millions, resulting from the union of the provincial banks with the Bank of France, pursuant to the decrees of April 27 and May 2, 1848. With this addition it became 91,250,000 francs. The law of June 9, 1857, doubled that figure, and stipulated that out of the proceeds of 91,250 new shares to be issued, 100 millions of francs should be deposited in the public treasury in exchange for an inscription of inalienable three per cent. rentes of four millions a year. This transaction was completed on the 31st of December, 1860. This portion of the capital constitutes the reserve, necessary for the redemption, over the counter, of the bills which the bank puts into circulation. The limit of the circulation was fixed by three decrees of 1848 to an issue of 452 million francs; by the law of December 22, 1849, it was raised to 525 millions; but by that of April 6, 1850, all restrictions upon the amount of it were removed.

The law of June 9, 1857, required that within ten years from that date, the bank should have a branch in each of the departments. At the end of 1866 there were fifty-five branches established, and their united operations in that year amounted to 5,069¼ millions of francs.

The principal business of the bank is the discount of commercial paper, bearing three signatures and not having more than ninety days to run. Instead of a third signature, the decree of January 16, 1808, authorizes the bank to receive collateral security of public stocks, or corporate shares of adequate value. Formerly, it discounted only twice a week, but since 1837 paper is discounted every day the bank is open for business, and the proceeds of the discount are paid over immediately, whereas formerly they were held over till the following day.

The progress of discounts at Paris since the establishment of the bank has been as follows:

In 1800 the amount of commercial paper discounted did not exceed 112 millions of francs; in 1805 it had risen to 631 millions; but in 1814 it had fallen again to 85 millions, from which point it rose, till in 1817, it stood at 547¼ millions.

The bank pays no interest on deposits, but it makes collections for the depositors without charge.

The amount of the note circulation and of the specie reserved at corresponding dates is one of the facts most worthy of observation. The following figures show the maximum in millions of francs, for the years indicated:

Years.	Circulation.	Reserve.
1807.....	167·6..	83·6
1817.....	96·2.....	94
1827.....	303·5.....	193·8
1837.....	216·9..... ...	248·2
1847.....	288·8.....	107·5
1848.....	390·4.....	141·5
1852.....	525·8.....	513·9
1856.....	589	132·9
1860.....	801·2.....	549·2
1862.....	869	431·3
1864.....	839·6.....	367·5
1866.....	.....1,029	748·7
1867 (Dec. 5).....	1,142	987
1868 (Oct. 26).....	.....1,266	1,207

These losses from bad debts are very inconsiderable, in fact, and especially so when the amount of business is considered. Up to 1833, inclusive, the sums carried to profit and loss to cover eventual losses of discounted paper did not reach two millions of francs ($400,000). After the Revolution of 1848 the suspended debt of the bank and its branches amounted to eighty-four and a half millions of francs ($17,000,000), but the whole of this debt was paid in the course of the two following years. Up to 1856 the sum charged off for bad debts slightly exceeded three millions of francs ($600,000), out of a total of sixty thousand millions ($12,000,000,000) discounted 1-200 of one per cent.—*Translator.* On the 24th of December, 1861, the suspended debt amounted to only 291,021 francs ($60,000), but at the same date in 1866 it had risen to 3,124,140 francs ($625,000). This increased figure was due to the crisis of 1866 in England, which had stricken down many of the English banks and caused the suspension of French houses having relations with them.

It was from the outset provided that the stockholders should receive a dividend of 5 per cent., and that the surplus should constitute a reserve fund to secure the maintenance of a uniform rate of interest, the reserve to accumulate till it reached a certain per centage. The minimum dividend was 10 francs (1 per cent.), in 1814; the maximum 272 francs (27 per cent.), in 1856; in 1859 it was 115 francs; in 1860, 140 francs; in 1864, 154 francs; and in 1866, 156 francs for the 133d and 134th dividends since the creation of the bank.

In the sixty-seven years of its existence the total of its operations has reached the sum of 133,390 million francs ($26,680,000,000), which is thus divided:

1. Discount of commercial paper, 75,357 millions; of bonds of the Mint, the Treasury, and the Bakers' Bank, and orders for cutting timber, 2,954 millions. Total, 78,311 millions.

2. Advances on treasury bonds, canal shares, and other securities, 990 millions; on rentes, 3,940 millions; on bullion, 2,304 millions; on obligations of railways, and of the Credit Mobilier, 4,434 millions. Total, 11,668 millions.

3. Operations in bullion and premiums on gold, 556 millions; operations with the Treasury and the city of Paris, 6,267 millions.

The total of these three classes is 96,762 millions of francs. The residue of 36,628 millions must be referred to operations of the bank and its branches other than discounts and advances.

The gross profits derived from all these operations, including the increase of rentes which the bank holds from the State, have amounted to 902 millions, of which 717 millions have been distributed in dividends, and the balance has been applied to the various expenses of the bank and its branches.—*Banker's Magazine.*

SPEEDY PROCESS FOR RECOVERING DEBTS.—Mr. McColl of Norfolk has introduced into the Legislative Assembly of Ontario a Bill entitled: "An Act to facilitate the recovery of debts acknowledged in writing, and to lessen the cost on their collection." It provides that all debts settled by note or acknowledged in writing, if unpaid for twenty-five days, shall become judgments against the debtor without the usual process of law, "provided such note or other written evidence of debt is undisputed." Such debts before becoming judgments "shall be placed in the hands" of the Clerk of the Court having jurisdiction, with an affidavit of the debt being paid and unpaid for twenty-five days, and the Clerk shall register it as a judgment. Judgments so obtained shall "hold the real and personal estate (now liable by law to be seized under execution for debt) of the debtor until such judgments are satisfied. If the note or other evidence of debt be disputed, the debtor may "on the day of the maturity of such debt, or within ten days thereafter notify the Clerk when such judgments

are to be entered," of his intention to contest payment, setting forth his grounds of defence. Thereupon the Clerk shall notify immediately the the Judge presiding in such court, then "in that event the usual process of law shall be followed as in all disputed suits." If the defence is frivolous or vexatious the defendant shall be liable to all costs and damages incurred. On all judgments obtained under this Act no execution shall issue until after the expiration of thirty days, and then only on Judge's order.

DELERY GOLD MINES.—The action in the case of John O'Farrell and others against Alexander R. C. DeLery, now before the Court, was brought, says the Quebec *Chronicle*, to revoke the instrument known as the patent granted to the DeLery family as seignior and proprietors of the Fief and Seignory of Rigaud-Vaudreuil, giving the patentee the exclusive privilege to search, dig for and work all gold mines found in the seigniory, and to recover $250,000 damages.

RAILWAY—RECEIPT NOTE FOR FREIGHT.—Plaintiff's correspondents in Chicago delivered there to the Michigan Southern Railway Company certain articles of merchandize, to be transported to Toronto for plaintiff, that company at the time of delivery giving a receipt-note to the effect that they had received from plaintiff's correspondents the merchandize in question, consigned to plaintiff at Toronto, to be transported over their line of road to their terminus, and delivered to the company whose line might be considered a part of the route, to be carried to the place of destination; the Michigan Company not to be liable as common carriers for the goods whilst at any of their stations awaiting delivery to the Company which was to forward them; with the further proviso, that no company or carrier forming part of the line, over which the freight was to be carried, should be responsible for demurrage or detention at its terminus, or beyond or on any part of the line, arising from any accumulation or over pressure of business; and that "the Company" should not be liable for the destruction or damage of the freight from any cause whilst in the depot of the company, or for any loss or damage from "Providential" causes, or from fire, whilst in transit or at the stations.

It appeared that there was an arrangement between the Michigan Company and the defendants that the latter should carry their freight from the terminus of their line to certain points in Canada, and that the freight in question here arrived in Detroit, the terminus of the Michigan Company, who telegraphed defendants' agent, the day before its destruction by fire, that it was in store, and requested them to forward it. It also appeared that at this time defendants had such an accumulation of freight on hand that they could not transport it all over their line, and could not therefore receive plaintiff's goods which were destroyed by fire at the Michigan Company's Station in Detroit the day after the defendants were advised of their arrival. In an action against defendants for the value of the goods, charging a refusal on their part to receive them, in consequence of which they became lost to plaintiff, *Held*, that plaintiff could not recover for that the receipt-note given by the Michigan Company, formed the basis of the contract to carry, and that they became the carriers; but that they only undertook to carry over their line of road, and were plaintiff's agents to deliver over his merchandize to defendants to be carried to Toronto; but that the understanding between the Michigan Company and defendants, that the latter would, on certain terms, carry on the former's freight to Canada, created no privity between defendants and plaintiff, so as to enable him to sue defendants for not carrying out that arrangement; and that, even if defendants were bound to receive the merchandize at Detroit, for carriage to Toronto, the evidence shewed that they were not liable for not receiving, owing to the overcrowded state of their premises, and the pressure of freight upon them.

Held, also, that plaintiff could not, in any case, recover more than nominal damages, if even that, as the value of the goods, which had been destroyed by fire, would not be the damages which would naturally flow from a breach of contract, or refusal to carry, in disregard of defendants' common law obligation to do so; for that the loss by fire arose from the omission to insure, and it would by no means follow that, even if defendants had received the property, it might not have been on the express condition of exemption from liability in that event.

Held, also, that the condition that "the Company" should not be liable for loss from Providential causes, or from fire from any cause whatever, &c., applied to the Michigan Company alone, and not to defendants also.—*Crawford v. G. W. R. Co.*, 18 *C. P.* 511.

Commercial.

Toronto Market.

Trade has improved somewhat since the beginning of the new year; but there is not much activity in any branch.

GROCERIES.—Business, since the beginning of the week, has been a little more brisk; there is a good deal doing with city buyers. *Teas.*—Several lines of medium have met with a better enquiry from jobbers. Considerable sales of half-chests greens have been made in New York on English orders. *Sugars.*—Quiet and unchanged.

PRODUCE.—*Wheat.*—Receipts 8,360 bushels, and 10,050 bushels last week. There is more demand for Spring, chiefly of a local character, and sales of several carloads occurred at $1 02 to $1 03. Midge proof would bring the same figures but is not offered. Fall, there is a fair demand for good samples, which are worth $1 10 to $1 12. Nothing prime could be bought below $1 14 to $1 15, owing to its scarcity and to the fact that it is held in few hands. *Barley.*—Receipts by cars 959 bushels and 870 bush. last week. The market is unchanged at $1 25 to $1 27; we notice greater activity in the New York market. There are one or two large holders here who are confident of a rise to a point far above present quotations before our Winter is over. *Peas.*—Receipts, slight.—The market is quiet at quotations. *Oats.*—Receipts 4,800 bush. and 2,400 bush. last week. Sales of eight to ten cars occurred at 53 to 54c. delivered in the city, the market closing at 52c. on the track.

FLOUR.—Receipts, 1,225 bbls, and 3200 bbls. last week. There are buyers of No. 1 superfine at $4.50 to $4.55, and sales of 500 barrels occurred at $4.55, and 400 bbls. at $4.60. Other grades nominal and not quoted.

PROVISIONS.—*Dressed Hogs*—The market was active throughout the week, and closed from 75c. to $1 higher than last week. One or two lots sold at $9.50, and medium lots brought $9 freely. Some very light sold as low as $8.62½. In other provisions nothing doing.

St. John Markets.

Breadstuffs—The demand continues to be very light, and there is no change in prices. Superfine continues to rate at $5.90 to $6 for ordinary brands of Canada, favorite qualities bringing 10c to 15c above the outside rate. Arrivals are in excess of sales, and the stock is not diminishing.

Flour and Meal—Duty: free, except oatmeal, 15 per cent.

Extra State, per brl	$5.75 to 6.00
Canada Superfine	5.90 to 6.00
Canada Choice	6.00 to 6.15
Family and Pastry	7.25 to 7.50
Rye Flour	6.00 to 6.25
Oatmeal	7.50 to 7.55
Cornmeal	4.50 to 4.50

Arrivals of flour have kept up late in the ye and the stock now on hand is estimated at 20,0 to 25,000 barrels. Of course, as usual at t date, the demand is small, and will continue for two months to come, hence there is not mu to encourage holders in looking for hig prices. The year has been an unprofitable one millers and dealers in flour, there being very f indeed who will go out of the year 1868 witho loss. A new feature in the flour trade of the p year has been the opening of some trade with t distant port of Milwaukee; some thousands barrels having been received from there. We b lieve this trade has been without profit to the i porters. Present appearances indicate that l prices will prevail during the winter and spring

A Duty on Salt

A petition has been gotten up by W. T. Ha Esq., M.P.P., which has been already signed sixty-four members of the Local Legislature, presentation to the House of Commons when meets. It runs as follows:

"We the undersigned members of the Lo Legislature of Ontario, would most respectfu represent to your Honorable body, that the d covery of salt at Goderich, in the county of Hur is an event of great importanee not only to t Province but to the whole Dominion of Cana and we also most respectfully wish to repres to your Honorable body, that salt manufactu in the United States of America, is permitted be imported into this Province free from du and that the Government of the United Sta exact a duty of seventy cents in gold on ev barrel of salt exported from this Province into t said United States. That we look upon this st of affairs as unjust in the extreme, and hope t your Honorable body will take the matter i your serious consideration, and give such relief the premises as to your Honorable body in y wisdom may seem meet."

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, Secretary, | GUY. R. PHELPS, President,
EDWIN W. BRYANT, Actuary, | ZEPHANIAH PRESTON, Vice President.
LUCIAN S. WILCOX, Medical Examiner.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS.

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the familics of deceased members, nearly $2,000,000, and at the same time added more thau four millions to its accumulated capital.

The whole record of this Company has been one of prudent managemeut and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its eutire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

Meetings.

THE CANADA COMPANY.

The half-yearly meeting of the shareholders of this company was held at their offices, 1, East India Avenue, London, England, on the 31st Dec.

The report was to the following effect :—

The directors propose to recommend a division out of the assets in hand of 1*l.* a share, free of income tax, as dividend for the half-year ending the 10th of January next. They propose also to divide a further sum of 10s. a share, as a third instalment towards the repayment of the paid-up capital of the company. The funds in hand in London, according to the finance statement, are 18,585*l.*, and the liabilities 1,211*l.* leaving a balance of 17,374*l.* The proportion applicable to repayment of capital is 6,884*l.*, and the proportion applicable to dividend 10,490*l.* The balance at Bank of British North America is 1,503*l.* in currency, and the liabilities 6,115*l.* In addition to the above liabilities, there is a sum of 18,749*l.* currency at the credit of Settlers' Savings Bank account, which has been deposited with the company by their lessees to meet the rent and purchase-money of the lands occupied by them, but which may be withdrawn at the option of the depositors, subject to the deduction of all arrears of rent and taxes due to the company. There was also circulated a comparative statement of the lands disposed of and moneys received in Canada from 1st January to 27th November, 1868, which showed that the lands sold and leased amounted to 43,146 acres, against 52,561 in the same period of 1867. The receipts in the same period amounted to 56,644*l.*, against 68,847*l.* in 1867, showing a decrease of 12,203*l.*

Mr. Ransford was then elected to a seat at the Board in place of Mr. Wilson, deceased.

The Chairman said there was a falling off in the business as compared with 1867, but when the figures were analysed, and the main causes of it considered, he thought they would concur with the board that there was nothing to discourage them. The circumstances especially causing the reduction in their receipts arose through the smaller amount of conversions falling due during the year than in the preceding one. Besides which, they had sold less acreage, and they could not expect year by year to keep up the maximum amount of sales. There was a small decrease in the average price realized of about 1s. 4d. an acre. He found that 18 per cent. of these sales in 1868 represented sales of land which in 1854 were valued at 2s. to 10s. per acre. He might state that these lots have been sold from 7s. 6d. to 30s. instead of from 2s. to 10s. an acre, which was a satisfactory evidence that they were not altogether falling behind. He would now move the declaration of a dividend of 20s. per share on 8,915 shares, clear of income tax.

The resolution was carried *nem con.*

The Chairman had to announce that the directors proposed to divide out of moneys received from lands in reserve to meet capital a sum of 10s. per share, which would be paid at the same time as the dividend—viz., on the 11th prox. Since the closing of their account they had received considerable remittances from their commissioners, amounting to 3,500*l.*

Mr. Ransford had resided some years in Canada, and was acquainted with the Huron tract and the country generally. The knowledge he had acquired he would be happy to give to the use of the company, so as to further their interests. The chairman had made some remarks about salt, and he could fully bear out all he had said. [The hon. gentleman here handed to the Secretary a very beautiful sample of the salt obtainable in the country. It was remarkable white and sparkling, very dry, and seemed to be very pure.] There were as many salt springs as they liked to dig for. The country about Goderich would be the Cheshire of America, and would be able to supply the whole West. It was the purest salt in the world, and contained no chloride of calcium. The sample was perfectly dry, although it had been in this country two months. The value of salt in Canada was five times as much as in this country, it being about 50s. a ton.

The proceedings then terminated.

ERIE AND NIAGARA RAILWAY.

A meeting of the rate-payers of the county of Norfolk, was held in Simcoe, on Jan. 2nd, for the purpose of discussing the proper course to pursue, with reference to granting the right of way through the county to the Erie and Niagara Railway Co. The meeting was attended by a considerable number of citizens. After it had been formally called to order by the Warden, the following resolutions were put and carried :—

"That railroad communication would be of immense advantage to this County, inasmuch as it would enhance the value of real estate; would make a better market for all kinds of produce at all seasons of the year, more especially during the period navigation is closed ; and would tend to the more rapid settlement of its wild lands, as it would greatly facilitate the ingress and egress of parties looking for lands whereon to settle. That in view of the great advantages this county would derive from railway communication, this meeting pledges itself to use every effort to secure this most desirable boon. That the people of this County were pleased that the efforts to secure a charter for the construction of a railroad through the tier of counties skirting the north shore of Lake Erie were successful ; and that so soon as the parties controlling the charter are in a position to proceed with the construction of this great work, it will be the interest and duty of the people of Norfolk to use every means to secure its speedy completion. That having learned that the municipalities, through which the contemplated road is to run, will be required to give the right of way, this meeting respectfully recommends that the County Council should purchase the same through the county of Norfolk, and give it to the company, upon a good and sufficient guarantee being given that the road will be constructed, or the right of way revert to the County."

PORT ROWAN SHIP-CANAL CO.—The annual meeting of the shareholders took place at Port Rowan, on the 18th of January. The five directors elected were, Messrs. E. Deedes, H. J. Kilmaster, John Charlton, W. H. Stevenson, and A. Burrowes. Mr. Deedes was re-elected President; and

Mr. Chauncey Pennett, Secretary, Treasurer, and Superintendent. The Simcoe *Reformer* says the company is flourishing; stock above par, and a dividend of ten per cent., declared for last year. The directors contemplate to deepen the outlet during the ensuing season.

COBOURG, PETERBOROUGH AND MARMORA RAILWAY.—The annual meeting of the Stockholders of the Cobourg, Peterborough and Marmora Railway and Mining Company was held at the Company's Offices, Cobourg, on Monday, 4th instant. John Bell, Esq., Q. C., in the chair.

After the transaction of certain business in connection with the contract with Mr. McDougall for the carrying of number, the following gentlemen were elected Directors for the ensuing year: Messrs. Thos. S. Blair, and J. H. Schoenberger, Pittsburg, G. K. Schoenberger, Cincinnatti, Isaac Butts, Rochester, J. Harshman, Dayton, Ohio, John Bell, Bellevile, and J. H. Dumble, A. Frase, P. P., and Col. W. P. Chambliss, Cobourg.

A resolution was adopted at a wooden railway meeting held recently in St. Eustache, Quebec, pledging aid to the extension of the proposed road to Ottawa, by the North Shore. *La Minerve* asserts that there are eighteen hundred square miles of standing timber, well adapted for fire wood, in the neighborhood of St. Jerome, another proposed terminus of the wooden railway scheme now before the public.

Insurance.

FIRE RECORD.—Port Hope, Jan. 15.—The old frame Distillery buildings on Cavan street, owned by Mr. Mouson, were destroyed by fire; also a small frame building adjoining the distillery premises. The latter was occupied by Patrick Curran, while the former was unoccupied. The fire originated in the distillery building, and rapidly communicated to the other building.

Gar[illegible]axa Township, Ont., Dec. 31.—A barn, the property of Mr. Turnbull, on the 5th concession, was burned to the ground. The barn was filled with hay and oats; no insurance.

Aylmer, Jan.—The Court House at this place was totally destroyed, and the County Gaol partially. The cost of the building is put at $35,000, and there was an insurance of $12,000 in the Royal. There is no fire engine in the place, so that the only opposition offered to the flames was water poured on by hand. Cause unknown.

London, Ont., Jan. 16.—A fire occurred here this evening at six o'clock, by which White's Hotel, North street, was almost totally destroyed. Most of the effects were saved. The loss will be about $1,200 on building and contents; insured in the Western, the building for $1,400 and $400 on contents.

New Aberdeen, Ont., Dec. 28.—A house on the farm of John Linton was burned, and nothing saved from the flames except a few articles. The house occupied by Mr. Linton himself would also have been burned, had not a few of the neighbors aarived in time and worked manfully, thus preventing further damage.

Peel Township, Ont., Dec. 28.—The barn of Mr. Matthew Nay, 3rd concession of Peel, was totally destroyed by fire, with its contents, comprising almost all his crop of last season, and several implements. The horses and harness were saved. Loss estimated at $800; insured for $400 in the Waterloo Mutual.

Montmorenci, Jan. 11.—The match factory of Howard & Fitch was entirely destroyed. Loss, $15,000; insured in the British America for $3,000. The fire originated from the stovepipe, which ignited a partition.

Halifax, Jan. 11.—A fire broke out in a wooden building on Star street, north of Temperance Hall, owned by Murdoch Lindsay, and occupied by him as a work shop. The fire, which originated from a defective stovepipe, was soon extinguished.

Brantford, Jan. 20.—At an early hour this morning a fire broke out in a brick store on Colborne street, owned and occupied by W. Lines, grocer. The fire is supposed to have originated up stairs, which was occupied by J. D. Kirchner, as a cigar manufactory. The building is entirely destroyed. The stores adjoining were on fire several times, but by the great exertions of the firemen they were saved. W. Lines' loss not known; insured for $3,000 on building and stock. J. D. Kirchner's loss about $1,200; insured for $700. Cause of fire not known.

—Between 400 and 500 deaths took place during the past year in Montreal from small pox.

—The National Life Insurance Company of the United States has deposited $50,000 with the Government. Mr. Douglas, Jr., of Montreal, is the agent.

LAW OF LIFE INSURANCE.—A. P. Gould, of Nashua, N. H., had a policy on his life—$1,400—"for the benefit of his wife and children." But he left a will depriving his daughter of all interest in the policy. The daughter sued the executors, and the Court has decided in her favor, holding that a life insurance policy cannot be changed by a will.

ÆTNA LIVE STOCK INSURANCE COMPANY, OF HARTFORD.—This Company has determined to discontinue its agencies and withdraw from the business. The causes that have led to this step are simply the unprofitable nature of the business, and the shock to public confidence given by the failure of the *Hartford Live Stock Company* last August. The Ætna commenced business in September, 1857, and four months after the close of its first year, its statistics reveal so unpromising an experience as to discourage from further effort.

LIFE INSURANCE.—A case of interest to life insurers has recently been decided by the Superior Court of New York. A life insurance company in Maine in September, 1866, issued a policy for $10,000 upon the life of a Mr Warner of this city, who represented, at the time of his examination by the medical officer of the company that he had no regular physician. Warner died in February, 1867, when it became known that he had availed himself of the services of one doctor for himself and family for several years, receiving presciptions from him the month before his application for life insurance, and also after the policy had been issued. Under these circumstances the insurance company refused to pay the claim of Mr. Warner's heirs; and upon the trial of the case before the late Justice Robertson, the position of the defendants was sustained. The matter was then taken on appeal by the plaintiffs to the General Term of the Superior Court, and the decision of the court below was affirmed.—*N. Y. Times.*

LEGISLATURE OF ONTARIO.

ONTARIO MUTUAL INSURANCE COMPANY.—On January 11th the House went into committee on the Bill to grant certain powers to the Ontario Farmer's Mutual Insurance Company.

Hon. Mr. McMurrich urged that the Company should be restricted to doing business strictly on the Mutual principle. Dr. McGill said that several Bills, having the clause now objected to were allowed to pass last session. Hon. Mr. McMurrich said he had opposed these Bills last year, both in the Private Bills committee and in the House, Dr. McGill—If he did, it was clear he did not succeed in convincing the judgment of the majority of this House. The very language of the statutes of last session was copied in this Bill. This Company found that, unless they were allowed to receive premiums entirely in cash as well as partly in cash and partly in bills, they could not compete on fair terms with other companies. If this clause were struck out, the Bill would be of no use. Hon. Mr. McMurrich said the principle was a wrong one, and a stand should be taken against it, and as well begin with this Bill. Instead of expunging the clause, he would be satisfied if it were amended, by providing that the man who paid a cash premium should not give his note for double its amount. Dr. McGill said this proposition was altogether unreasonable. No one, after insuring on the cash principle, would consent to give his note in addition. Mr. Springer supported the Bill, which, he said, contained the same powers as were given to a Waterloo Company last year. He thought there was nothing wrong in the principle, and the companies which carried on business on it, were as prosperous as any others. Mr. Ferrier supported Mr. McMurrich's view. Mr. Rykert urged on the attention of the Attorney General the desirability of having a General Act, under which all the companies should be incorporated, and which should define the limits of their powers. He did not think that insuring on the cash system in Mutual Insurance Companies was a sound principle. Atty.-Gen. Macdonald said the proper way to regulate these matters was by a General Act. But the trouble was, that after a General Act was passed, members would be introducing special powers for particular companies. He was willing this Bill should pass, but hoped that next session they would commence a clean sheet and carry out a different system. Mr. Blake was unable to concur in the proposition of the Atty. Gen.. He thought the principle of the Waterloo Bill was entirely objectionable, and was opposed to repeating, with reference to this Bill, the mistake of last session. Hon. Mr. Cameron said he had not understood the Attorney-General to say that the principle of this Bill was wrong.. He had merely said that exceptional legislation was wrong. He (Mr. Cameron) supported the Bill, because he thought one company should not enjoy privileges which were denied to another, and because experience had not shewn that the principle was unsafe or unsound. Atty.-Gen., Macdonald said those who objected to the principle, should show that bad consequences had resulted from it. But Mr. McMurrich—prevention is better than cure. Mr. Rykert said, if there was any force in the Provincial Secretary's argument, this Bill should be a general one, granting to all Mutual Insurance Companies, the powers given last session to the Waterloo Company. Mr. McMurrich's amendment to expunge the clause was negatived by 23 to 24.

The Bill was reported, and ordered to be read a third time to-morrow.

Freehold is much inquired for; sales were made at 106, 106¼, 107 and 107½, and closes firm at the latter rate. There are buyers of Montreal Telegraph at 133; no sellers under 136. Canada Landed Credit has been asked for during the week at 72. Several good mortgages have been sold to pay 8 per cent. interest. Money is freely offered on good paper.

BANK OF ENGLAND.

	Jan. 1, 1869.	Jan. 3, 1868.
Bank rate of discount..	3 per cent.	2 per cent.
Bank reserve.....	£9,931,228	£12,819,673
Bank stock of bullion.	18,445,858	22,061,728
Price of Consols.....	92⅜ x d	92⅛ x d

The demand for money has been very heavy this week, although not more so than is customary just before the end of the year. The rates of discount have, however, rather stiffened, the best three months paper not being taken below 3 per cent.; we may now, however, look for an increased supply of capital, and probably a slight reduction in its value. On the Stock Exchange some pressure for money has been experienced, and for advances on British Government securities as much as 4 per cent was paid.

The bank return this week exhibits an increase of £154,237 in the stock of bullion. There is, it will be noted, a very considerable addition to the other securities, owing to the increased discount demand experienced by the bank.

CHANGES.—Mr. J. S. Meredith, for some time teller of the Commercial Bank in Berlin, and latterly in the same position in the Merchant's Bank, is about to leave Berlin, having been promoted to Ingersoll with an increase of salary.

COUNTERFEIT.—Yesterday we were shown a counterfeit $4 note on the Niagara District Bank. The counterfeit may be easily detected by a careful examination of the Vignette on the left hand corner, which is a portrait of the Hon. Mr. Merritt, being most wretchedly executed. The rest of the note is passable. We understand there are a considerable number in circulation.—*Spectator*, 13th.

—The Bank of Montreal has closed its agencies at Whitby and St. Catherines. In the former place its deposits have been handed over to the Ontario Bank, and in the latter to the Bank of Commerce.

PORT WHITBY AND PORT PERRY RAILWAY.—The Ontario Legislature went into committee on the bill to amend the charter of this Co. on the 11th. Mr. Paxton said the Co. had now shown their ability to build a road from Whitby to Port Perry. The bonuses had been granted, and the contracts let, and the contractors were going on with the work. Last year he supported the Toronto and Nipissing, the Grey and Bruce, and the Erie and Niagara Bills, believing the Legislature was to support free trade in railways, even in cases where a projected railway crossed an existing one. On the same principle he claimed support for this Bill. The company asked powers to extend their line from Port Perry to Beaverton, with a branch to Uxbridge. It was urged against the Bill, that this extension to Beaverton would hinder the progress of the Toronto and Nipissing. He thought the Toronto and Nipissing must be a scheme weak in the extreme, if it was to be hindered by this little scheme from Whitby.

Hon. Mr. Cameron, did not the promoters of this Bill go into the Township of Brock and do all in their power to prevent the people of that township from supporting the Toronto and Nipissing.

Mr. Paxton said this Bill did not compel the township of Brock to support the Whitby extension. The Toronto and Nipissing must be a weak scheme, if it could not succeed without a bonus from Brock. In reply to another question, Mr. Paxton said the township of Reach had promised $12,000 to this extension. He moved an additional clause, authorising the extension to Beaverton, and a branch to Uxbridge.

Hon. Mr. Cameron said the Company's Bill of last session, authorised them to build a road, 17 miles in length, connecting Lakes Scugog and Ontario. The object of this Bill was not to provide railway facilities for the section of country through which this extension was sought, but to injure the Toronto and Nipissing, which had already received a charter for opening up that section. That this was the object, was manifest from the fact, that the township of Brock had been urged to the utmost by the promoters of this undertaking to oppose the Toronto and Nipissing. What evidence was there that the parties who had undertaken to construct the 17 miles to Port Perry, would be able to construct another 50 miles. On the contrary, was it not likely that this extension would ruin the Port Whitby and Port Perry railway as a paying undertaking. The City of Toronto did not oppose this from any sectional motive, but the question was, whether it would be desirable that that small section of country should be traversed by three railways, when already there were charters for two railways, which would give it ample facilities, the Toronto and Nipissing, and the Lindsay extension to Beaverton.

Mr. Paxton said the extension to Beaverton would be—not 50 miles in length, but 28 miles.

Dr. McGill could not see how the passage of this bill would prevent the building of the Toronto and Nipissing road. The undertaking was a good one. It opened up the most direct route from the southern to the northern section of that district; and the company seeking this extension gave a good earnest in what they had done for what they would do. The fact was, that by this line the farmers would not only be enabled to get their freight cheaper to the front, but would get it to Whitby, from whence it could be conveyed to the large markets at a much lower rate than if forwarded to Toronto.

Mr. Cumberland would vote for the measure, because he was a convert to the doctrine laid down so emphatically by the Secretary last session, that the people ought to be left free to place railroads where they liked. He (Cumberland) saw that it was useless to attempt to check this railway legislation. He hoped the hasty railway legislation of that House would not lead to any disastrous results; but his position as a railway man led him to warn the House to be more careful as to what they did in this respect.

Mr. Paxton's motion, to restore the second clause, which had been struck out in the Railway Committee, was carried. The fourth clause, which had been struck out in the Committee, was also restored, so as to stand as follows:—

"4. All the clauses and provisions contained in the said Act incorporating the said Port Whitby and Port Perry Railway Company, and the several powers and authorities conferred upon such Company by such Act, and all subsequent Acts relating thereto, and the several clauses of the "Railway Act," mentioned and referred to in said Act, shall apply to the extended powers conferred hereby. And the extension hereby authorized shall be commenced within two years, and completed within five years after the passing of this

Act, or else the charter of the said extension shall be forfeited."

The Committee then rose and reported the Bill, with amendments. Amendments concurred in, and Bill ordered for a third reading.

COBURG AND PETERBOROUGH RAILWAY.—Mr. Blake moved the second reading of the Bill to remove doubts as to the rights of the bondholders to the surplus funds paid, or to be paid, into the Court of Chancery.

Mr. Fraser objected to the Bill as unfair towards the Company. Some years ago, when the affairs of the Company came before Parliament, an arrangement was made by which this railway was sold for $100,000. Out of this sum it was agreed that the bondholders should receive $70,000, and that the balance, $30,000, should be paid over to the parties claiming for unpaid rights of way, depot grounds, &c. These parties had at present their claims in the Court of Chancery, and when they were to be approved of by the Master, were to be paid. If the $30,000 were insufficient, the Company were still liable for the excess. As a matter of fact $10,000 remained in the Court of Chancery, and the Railway Company believe that this unappropriated money should revert to them, as they placed it there. He might further remark that the Company were engaged for some time in securing some of the claims against the line, and had actually paid out of other funds belonging to the Company, the sum of $3,000 in the purchase of claims against the Company. The effect of the bill, if passed, would be, not only would they receive no benefit from the money in Court, but they would not be repaid even the sum lately expended. Under these circumstances he would, seconded by Mr. Coyne, move that the Bill be read a second time that day six months.

Hon. Mr. Cameron argued that the Company had no right to the balance in Court, but that the bondholders, who were the losing parties, ought to have the benefit of it.

Mr. Pardee said the whole question turned on what was the arrangement. If it were true that $30,000 had been appropriated for the right of way, and it were bought for less, it appeared to him that the balance should go to the bondholders. But if the arrangement were as stated by the member for Northumberland—that in case the right of way cost more than $30,000, that then the excess would have to be paid by the purchasers of the Road—then it appeared to him to be clearly according to the principles of law and equity, that whatever difference the purchasers made, should go into their own pockets, and not into those of the bondholders.

Hon. Mr. Cameron enquired of the member for South Bruce if he was right in understanding that the Court of Chancery, which had the matter in charge was not of opinion that the bondholders were entitled to the surplus; but that under the provisions of the law they could not so determine it.

Mr. Blake said he had no cognizance of what had taken place in the Court of Chancery. He never heard what opinion was expressed there.

Mr. McMurrich thought the parties here applying for redress should have gone to the Court of Chancery.

After some further debate,

Mr. Blake moved that the debate be adjourned in order to satisfy himself whether or not the matter was before the Court of Chancery.

The motion for adjourning the debate was then put and carried.

ROYAL INSURANCE.—This Company has issued a neat little almanack for 1869. It contains the annual report of the Company and the usual data. An immense edition has been printed and the copies distributed with a liberal hand throughout the country.

THURSDAY, JANUARY 21, 1869.

RAILWAYS AND RAILWAY LEGISLATION.

Our neighbours across the lines think us Canadians anything but a fast people. They picture to themselves a very cold, undefined region to the North of freedom and civilization, away beyond the sound of the bugle-horn of liberty, with unenterprising, drowsy, cold-benumbed inhabitants and call that Canada. Such occurs when there is nothing to be gained by ascertaining the true character of the country thus described. But, when occasion requires, as in the case of an agitation for reciprocity in trade, there are not a few among them who exercise themselves wonderfully to prove that we are a shrewd, scheming, devil-may-care set whose sole desire is to get the better of the United States and build up our country at the expense of our virtuous neighbours; that our progress is amazing and due entirely to the advantages we obtain by superior diplomacy and sharpness.

Without laying claim to the term fast, we are not inclined to submit to the reproach of slowness. At any rate, if we were slow, we are beginning to move along at an increased pace. If progress in the construction of railways is to be considered a test, we have a good record to show and are likely from present indications, to earn a few compliments for praiseworthy intentions. We have in the Dominion, 2388 miles of railway made up as follows:—Grand Trunk 1377, Great Western 251½, London and Port Stanley 24½, Welland 25, Northern 97, Port Hope, Lindsay and Beaverton 56, Cobourg, Peterborough and Marmora 22, Brockville and Ottawa 86, St. Lawrence and Ottawa 54, Carillon and Grenville 13, Stanstead, S. and Ch. 44, St. Lawrence and Industry 12, New Brunswick and Canada 107, European and North American 108, Nova Scotia, 145. Among these we do not include railways at present in process of construction, of which there are several. According to these figures the mileage is divided thus: Ontario (616 x 616) 1,278; Quebec, (69 x 515) 584; New Brunswick and Nova Scotia 145.

When the Intercolonial railway is built there will be direct communication between Windsor, Sarnia, Goderich or Collingwood the four points on our Western frontier, and St. John and Halifax on the Atlantic. A line of railway of the same gauge throughout the whole of Canada, affording access to the ocean at Montreal and Quebec during the season of navigation, and at all seasons with St. John, Halifax and Portland, is not to be sneered at. The railroad between Port Huron and Detroit is likely to be conformed to the Canadian gauge, and it is possible that a line of the same gauge will soon be constructed along Michigan to Chicago, so that, when the Intercolonial is opened, cars loaded in Chicago or Detroit can pass without transhipment to the sides of ocean vessels at Montreal, Quebec, Portland, St. John or Halifax.

But our great arteries of Commerce will be distended by many feeders. From all parts of the Dominion we catch the sounds of active labour. New Brunswick is pushing on its extensions to the United States, boundaries. Nova Scotia proposes to add 70 miles to its system. The Province of Quebec is not asleep. It proposes to extend the Massawippi railway and the Stanstead and Shefford railway, construct a railway through Missisiquoi, a wooden railway from Quebec to Gosford, a wooden railway through Arthabaska and Drummond, a wooden railway along the St. Francis, a wooden railway from Montreal to St. Jerome, a railway to the upper St. Maurice, and a narrow gauge road between the St. Lawrence and the Kennebec.

Nor is the Province of Ontario behind either in the number or in the character of its railway projects. At the last session of the Ontario Legislature no less than eight Acts were passed relating to railways. The following companies were incorporated:—the Wellington, Grey and Bruce, the Erie and Ontario extension, the Grey and Simcoe, the Whitby and Port Perry, the Toronto and Bruce and the Toronto and Nipissing and power was granted to the Cobourg, Peterborough and Marmora Company to extend their line to a point on the Chemong Lake and to the Grey and Simcoe to extend the line to Walkerton. There are at present before the Ontario Legislature five companies asking incorporation:—The Peterborough and Haliburton, to construct a woden or iron railway from Peterborough to a point beyond the town plot of Haliburton; the Kingston and Frontenac, to construct a wooden

way from Kingston to the vicinity of Belleville Lake in the Township of Loughborough, with power to extend into the Township of Alden or Oso; the Norfolk, to construct a railway from Simcoe, Port Dover, or Port Ryerse on Lake Erie, to Caledonia in Dumfries or to Brantford or Paris; the Simcoe and Muskoka, to construct a railway from some point on Lake Couchiching to Lake Muskoka; the Presque-Isle and Belmont, to construct a railway from Presque-Isle Harbour, thence through Brighton, Norham, Farnworth, Meyersburgh and Campbell, in Northumberland, and the Townships of Belleville and Marmora, to the Township of Lake Hastings.

The Ontario Legislature has before it, other matters pertaining to railways. The Toronto Nipissing Company seek to have legalized the by-laws passed and to be passed, and debentures issued or to be issued under such by-laws, granting aid to their undertaking, and to amend their charter by allowing municipalities granting a bonus of not less than $150,000 to the Company, the right to appoint a director; and by allowing the construction of a branch from Brock to Lindsay. The Toronto, Grey and Bruce, besides asking for the legalization of by-laws as in the former case, and the appointment of a director by each municipality that grants a bonus of no less than $250,000, prays the enactment of the following clauses:

That the following proviso be added to the 7th clause of 31 Vic. c. 40: provided always that nothing in the said clause contained shall prevent the application of any bonus granted by the City of Toronto, or Township of York, or Village of Mount Forest, or by any municipality between any of those points, pro rata to the mileage of the said railway between those points.

The Company may build any part of their railway to the West or North-west of the Township of Arthur, or the Village of Mount Forest, by sections, but no bonus granted by any municipality to the West or North-west of the Township of Arthur or the Village of Mount Forest, shall be applied to any other section than that for which such bonuses are granted.

The Corporation of Port Hope apply for power to enable them to transfer, by way of bonus to the Port Hope, Lindsay and Beaverton Railway Company, Port Hope Harbour Sterling Bonds, to the extent of $30,000, for the purpose of extending the line from Port Hope to Beaverton. Certain monies have been paid into the Court of Chancery by the Cobourg and Peterborough Railway Company under 29 Vic., cap. 79, certain bondholders of that Company have applied for an order holding their claims to the surplus money against the Cobourg, Peterborough and Marmora Railway and Mining Company.—The Act provides that the surplus of moneys paid into the Court of Chancery under 29 Vic. over and above the sum required to pay all claims for unpaid rights of way, station and depot grounds, as well as the further payment directed to be made by the said act for the like purpose, together with all interest thereon, shall be distributed by the Court among the bondholders, in addition to, and in like manner, as the sums formerly ordered to be distributed among those bondholders. There is also an act to amend and consolidate the various acts relating to the Cobourg P. & M. Railway & Mining Co.

The London and Port Stanley Railway Company has, it appears, got into trouble, and applies now, for leave to sell the railway, the purchase money, upon sale, to be paid into the Court of Chancery for distribution among the creditors according to priority.—The Port Whitby and Port Perry Railway Company ask to have their charter amended, by striking out the 23 section of 31 Vic., c. 42 after the words "provided always" and substituting the words "The said bonds, debentures and mortgages not to exceed in amount the paid up stock of the Company, together with the municipal or other bonuses expended upon such Railway;" and to obtain for the Company power to extend their Railway to a point on Lake Simcoe, near Beaverton, and to build a branch into the village of Uxbridge.

THE HURON AND ONTARIO SHIP CANAL.

It seems to us that the promoters of this scheme have taken a very injudicious course in selecting one member of the Ontario Government, as an object of attack, by way of revenge for the action of the Government. Such proceeding has, very naturally evoked opposition and we have at once two parties, the one promoting the objects of the Company, and the other assailing the whole scheme, as well as its supporters, with fact and argument which defy successful rebuttal. The petition which not a few merchants and prominent men signed, received the signatures of many who never troubled themselves to examine the scheme until this partizan warfare broke out, and consequently, we find some of those who numbered themselves among the supporters of the Company, now its active antagonists. Hence, we think, a blunder has been committed and the promoters of the scheme have only themselves to thank for it.

Mr. Chisholm's statements raise a distinct issue. The Canal Company's pamphlet claims that the proposed Canal would save, in the carrying of grain from Chicago to New York, a distance of 460 miles. Mr. Chisholm gives figures to show that only 240 miles would be saved. Mr. T. C. Keefer, in his report on the Lake Scugog route, places the shortening of distance at 250 miles.

The question of probable revenue is also discussed, the conclusions arrived at being unfavourable to the project. Were a vessel to pass each way through the Canal, every hour, night and day for seven months, carrying 3,276,000 tons, at 80 cents per ton, there would be a loss of $779,200. But it is asserted on good authority, that at the toll of 80 cents, not one vessel or steamboat would pass through. A toll of 80 cents a ton on grain is two cents and four mills per bushel of wheat. The rate from Chicago to Toronto, last December, was only one cent and one mill per bushel. The Northern Railway which runs the whole length of the proposed Canal, carries at the rate of one cent and five mills per bushel. Under such circumstances the Canal would not be very profitable. If the toll were reduced to 20 cents a ton, the tonnage passed through being the same as in the former case, the annual loss to the Company on their investment would be $2,744,800.

The Company claimes that cargoes of 1000 or 1200 tons might be sent through the canal, without transhipment, from Chicago to Liverpool. Mr. Laidlaw steps forward and shows that no vessel drawing over nine feet of water, equivalent to a lading of 300 tons, can come up the St. Lawrence, and that there is no harbour on Lake Ontario, except Kingston, and no shipping port on the upper lakes which a vessel drawing over eleven feet can enter.

Mr. Kingsford, C.E., in his useful book on the Canadian canals, considers that "as a solitary project, were the canal constructed, not one vessel more would pass by the St. Lawrence than goes by it to-day." And further, "all the advantages sought would be attained by the enlargement of the Welland Canal, with the addition of having only twenty-eight miles against one hundred of canal by Georgian Bay. The St. Clair Flats may be marked by objectionable features, but they are capable of improvement, to be obtained by increased depth." Mr. Worts, the President of the Toronto Board of Trade, who is the largest importer of corn, and thoroughly experienced in shipping matters gives evidence to the same effect.

To enlarge the St. Lawrence Canals would cost about $12,000,000. Before Europe could expect to profit much by a reduction caused by the Canal, the St. Lawrence Canals would therefore have to be enlarged. Chicago and Oswego might possibly be benefitted; but until the American navigation laws are relaxed, Canadian vessels would derive little advantage from the construction of the Canal,

as in their present state we are debarred the privilege of carrying grain from one American port to another.

The general commercial interests of Canada, it seems, would not be served to any appreciable extent by the construction of the Canal, at least, until the St. Lawrence Canals are deepened and the American navigation laws repealed. But would Toronto benefit by the work? It is true, a large amount of money would be spent within a hundred miles of the city; but it is contended with great force, that the Canal would cut off the trade on which the city depends. Vessels would clear from New Market, Barrie, &c., for Oswego and Montreal, and would load back for these places instead of loading at Toronto. What would become, therefore, of our great lumber and wheat trade?

With such facts staring one in the face, to say nothing of the practicability or impracticability of the work, the many engineering difficulties to be encountered at the ridges, or the supply of water, people very naturally look upon the scheme as chimerical, and justly feel hesitation in granting 10,000,000 of the public domain to aid it.

The popular view of the subject is that the land asked is of no value to us, and, if by granting it by way of bonus, we can get English and American capitalists to spend $40,000,000 among us, it is their look out whether the work will pay. But as Mr. Worts put it, in his masterly address to the Board of Trade, there is a question of commercial morality involved. Are our merchants justified in assisting to induce foreign capitalists to sink so much money in a work that would be useless and unprofitable? We have no right to impose on our fellow men, to take advantage of their ignorance, and to damage the good name of our country. Canada has suffered, rightfully or wrongfully, from the failure of the Grand Trunk as an investment. Suppose the $40,000,000 were sunk in the canal without the slightest prospect of a return, would not Canada again suffer? If capitalists will throw away their money we cannot help it, but we can, at least, refrain from tempting them into a great loss by indorsing a scheme which facts and figures show to be so utterly delusive as the one under consideration.

ETNA INSURANCE CO. OF DUBLIN.

It appears that the Sheriff of the county of Carleton, under four executions, amounting to $4,500, offered for sale, at Ottawa, the securities deposited by the Etna Insurance Company of Dublin with the Minister of Finance. When the Etna commenced to do business in Canada the Insurance Act of 1860 was in force, and, in accordance with its requirements, invested $10,000 in Canadian five per cents. An Ottawa paper states that the executions were sent to the Sheriff of Carleton from Toronto and Goderich, for the purpose of having these securities seized, and that "the seizure was made," and the securities duly put up for sale. The Ottawa *Times* says, "The bidders, however, were few, the company's agent having sent a verbal intimation "that he had lodged a written protest against "the surrender of the securities with the "Minister of Finance. The sale was consequently postponed until the 23rd inst., at "the same hour, noon, when, if the executors "are not previously satisfied, or proceedings "stayed, the securities will be peremptorily "sold to the highest bidder." We can easily understand that doubts exist as to the completeness of the Sheriff's title. The Act speaks of the deposit as a security liable to be forfeited to Her Majesty, on the breach by the Company, or its Agent, of any of the conditions of the Act, and only liable to be distributed among claimants in a certain event. It is provided that the Minister of Finance shall not issue his warrant permitting the withdrawal of the deposit or investment "until fifteen months after the day on which "the Company may have given notice that "they have ceased to carry on business in "this province." In case of the insolvency of a Company, the sum deposited "shall be applied pro rata towards the payment of all "claims duly authenticated against such Company, alike, as to losses, and premiums or "risks unexpired, or on policies issued in "this province." The evidence of insolvency is the failure to pay losses insured against, within this province, for ninety days after being due. The distribution may be made by order in Chancery, in Ontario. The contention, it appears, is that the deposit was for the benefit of all the creditors of the company. It would, certainly, seem that such a construction of the statute is both fair and reasonable.

Some one telegraphed to the New York journals the astounding information, that the total amount of deposits by Insurance Companies in Canada is $33,682,400.

Fire in Ottawa.—Just as we go to press we learn by telegraph that Desbarat's block, in Ottawa, was consumed by fire last night. Insurance on Desbarat's stock, Home of New Haven $8000; Ætna $8000; Hartford of Hartford $8000; London Assurance Corporation $8000; Provincial $8000 on building. Queen's Printer's Block —Lancashire $8000; Queen $4000; Royal $8000; Provincial, $5,000, and $4,000 in the same company for the benefit of the Government. On Mrs. Trotter's furniture, $3,000 in Etna of Dublin. Mr. Graham, of the Carleton Hotel, has a p... in the Imperial for $1,000. Total insur... $75,000. Loss variously stated at $140,0... $200,000.

NOVA SCOTIA GOLD FIELDS.

(From our own Correspondent).

Halifax, Jan. 12, 1...

The progress of the several established ... panies and proclaimed districts is tolerabl... indicated by the subjoined mill and bulli... turns. Investments in gold stocks have ... wholly ceased, though there has been enqu... shares in the Mt. Uniacke Co. of Uniack... Wellington Co. of Sherbrooke, both contro... Boston. The sale of the late Shaffer an... properties at Oldham, to parties in New ... wick is authentically stated.

Sherbrooke.—The low yield from the ... mill, in the absence of any explanation ... panying the returns, must be explained by t... position that this was an experimental ... test. Mr. Newell Snow is expected in ... to-night with about 500 ounces, the pro... the Wellington, Hayden and Derby, and ... ston mines,

Wine Harbor.—The *Eureka* mine is e... to send up about 70 ounces as the result ... fortnight's crushing. Messrs. J. DeW. ... and R G.. Leckie, are in Halifax, and re... tenders for the new mill of sixty stamps ... they propose having erected on their e... property in this district.

Waverley.—Professor H. Y. Hind's ge... plan, sections and reports are nearly com... and are of great interest. They cannot ... revive attention to this long neglected dis...

Tangier.—Mr. J. M. Forrest, the ma... the Strawberry Hill mine, reports the d... of a new lode that has given a large retu... surface tests.

Unproclaimed Districts.—Notwiths... the severity of the weather several pro... parties have been in the field, and return... just in time for the holidays. The subs... their report is thus given:

Masquodaboit (Jennings)—appears l... become of importance, very reliable an... stating that more gold is visible there in ...

quartz than in that of any other district. th of soil, wetness and want of a good road, the present drawbacks to its popularity.

IFTEEN-MILE STREAM is considered so import--about three thousand areas have been taken under leases and prospecting licences—that a ernment Surveyor has been sent down to lay ', and two mills are in course of erection. ad also has been commenced, partly at Gov- ent, and partly at the miners', expense.

EAVER DAM—The surface boulders are re- ably rich, but the exploring party returned wi out having succeeded in discovering any lodes.

GOLD RETURNS.

he following is an abstract of the mill-owners' rns for the month of December, received up o the 12th inst., at the office of the Chief Com- ioner. Oldham, Uniacke, and Renfrew Mills a not returned, but those districts are repre- ed in the appended bullion report:

Commercial.

Montreal Correspondence.

(From our own Correspondent.)

Montreal, Jan. 19. 1869.

I have to report exceeding dulness in all branches of trade, merchants, generally, being busy in making up their books and squaring up last year's operations. So far no new transactions have been gone into, and everything is conducted on purely retail principles. This is generally the case till towards the end of February, when the country trade usually brightens up, stocks running low about that time.

GROCERIES.—The market has been exceedingly quiet; some few lines of tea have changed hands, chiefly of Japans and Young Hysons. Twankays are enquired for, but all good qualities are scarce. Sugars have rather advanced, and are in good demand. Stocks here are not heavy, and the refinery prices are very stiff. Salt remains firm at 95c. for coarse and fine. Chemicals of all sorts are dull, the stocks being ample. Wines and liquors are very quiet, but not being pressed on the market, prices are maintained. Other staples are dull, with only a retail business doing.

PRODUCE.—Our receipts since the 1st January, have been heavy, in excess of our requirements, consequently prices are dull and the tendency of the market is downwards; some lots of extra strong bakers' sold at $5.00 to $5.05; but the latter is an exceptional rate; the range is—Extra, $5.25 to $5.40; Fancy, $5.00 to $5.05; Supers No. 1, $4.85 to $4.90; ditto No. 2, $4.40 to $4.50; even at these rates, buyers are very reluctant to enter the Market; the late rise in England has had comparatively but little effect here. In grain of all sorts, the business is so light that prices are purely nominal, I may quote U.C. Spring Wheat at $1.17 to $1.18; Red Winter, $1.16; Chicago No. 2, $1.10 to $1.12; Peas, 92c to 94c per 60 lbs; Corn, western mixed, 87½ to 90c per 60 lbs.; Oats are worth 45c to 46c per 32 lbs. for round lots; Barley, $1.20 to $1.25 for ordinary samples.

PROVISIONS.—The receipts of butter are considerable, but prices remain firm. Pork still rules high, and mess sells at $25 50 to $25 75. Other grades in proportion. Dressed hogs command full rates, say $9 to $9 50, for good to choice lots.—No particular change in other articles.

Toronto Market.

GRAIN.—*Wheat.*—Receipts 7,400 bush. and 8,360 bush. for the previous week. The demand for Spring continues light and there is not much offering. Good samples are worth $1.03 $1.04, and several cars sold at these figures. There is a limited demand for fall at $1.10 to $1.12; receipts are light and very little offered; the brightest samples of white are scarce and might bring an advance on these figures. *Barley.*—Receipts 1,300 bush. and 1,959 bush. last week. There is a small demand from brewers for car loads at $1.25 to $1.28 and a fair amount offering. *Oats.*—Receipts 6,700 bush. and 4,800 bush. last week. The market is rather dull at 52c. on track, a little higher was paid during the week. *Peas.*—Receipts very light and there is little doing; car loads are nominally worth our quotations. *Rye.*—Selling on the street at 70c. to 75c.

FLOUR.—Receipts 3,350 bbls. and 1,228 bbls. last week. No. 1 Superfine is dull at $4.50 to $4.55 for ordinary brands; Spring extra is worth $4.65. Sales of these two grades foot up over 1,000 bbls. in all at from $4.55 to $4.65. Extra is worth $5 to $5.25. Nothing doing in other grades.

PROVISIONS.—*Dressed Hogs.*—The market is firm and steady at our quotations with a considerable amount of business doing. Prices have ranged from $8 for very light weight to $8.25 for heavy and $9.50 for extra heavy. In other provisions little doing.

PETROLEUM.—A steady trade is doing at our quotations which remain unchanged.

DRY GOODS.—There has been no movement in trade worthy of notice since the commencement of the year. The imports of the leading articles of dry goods, at the port of Toronto, for three years were as follows:

	1866.	1867.	1868.
Woollens	$1,485,779	$1,439,494	$1 073,081
Cottons	1,3 0,009	1,307,246	979,914
Silks, satins, velvets	304,415	2 1,867	277,855
Linens	1.9,.59	175 199	165,883
Hats, caps, bonnets	49,042	54,333	63,234

GROCERIES.—There were very few changes in prices for a month past; any that have occurred are carefully noted in our price list. The imports of the articles named at the port of Toronto for 1868 were:

Sugar, yellow Muscovado	lbs.	3,213,407	$413,713
Cane juice	"	47,820	879
Confectionery	"	14,054	2,174
Coffee, green	"	2:6,211	26,499
Starch	"	3,805	195
Tea, green and Japan	"	66?,006	273,9.9
Tea, black	"	119,264	43,742
Tobacco, manufactured	"	25,608	7,779
Mace and Nutmegs	"	19,970	5,690
Dried Fruits & Nuts			48,028

The following were the importations of liquors at the port of Toronto for the year ending 31st December, 1868:

	1865.	1866.	1867.	1868.
Whiskey, gals	4,6.2	3,218	6,387	15,367
Gin, gals	2,715	3,757	4,907	8,850
Rum, gals	2,030	2,126	9,574	7,2b7
Brandy, gals	6 714	15,027	15,703	18,987
Ales, beer & d porter, gals	6,707	66	594	
" " "	4,445	4,445	7,700	13,804
Wine in wood, gals	1o,795	13,540	2o,359	33,211

FREIGHTS.—Rates by Grand Trunk Railway:—Flour to all stations from Belleville to Lynn, inclusive, 35c., grain per 100 lbs. 18c.; flour to Brockville and Cornwall, inclusive, 45c., grain 22c.; flour to Montreal 50c., grain 25c; flour to all stations between Island Pond and Portland, inclusive, 85c., grain 45c.; flour to Boston $1.15 U. S. currency; flour to Halifax $1,06, grain 53c.; flour to St. John 95c.; boxed meats and butter to Liverpool per gross ton 82s 6d.; lard or butter in tinnets 87s. 6d; pork 11s. per tierce; flour 5s 6d. per bbl.; grain 12s. 0d. per 480 pounds. Rates by Great Western Railway—Flour, Toronto to Suspension Bridge 25c. gold; thence to New York 70c U. L. currency per bbl.; to Boston 90c. gold. Rates from Toronto to Liverpool, London and Glasgow are—Beef, bacon, pork, hams, lard and tallow, in lots of one car load and upwards, $1.52 gold, per 200 lbs.; grain in bags of 5 car loads and upwards, 90c., do.; flour $1.62 per bbl., do.

The Sugar Trade of 1868.

The sugar trade of late years has not been a very profitable one to anybody, and we cannot say that there has been much improvement during 1868. It is true that the British and foreign West Indian crops have been large, but, at the outside, they do not produce more than a third of the known production of sugar, and, under the present imperfect conditions of manufacture, the current rates have not been very remunerative. The home trade have not had greater reason to think well of 1868, for the year opened with falling prices, which were followed in the spring by a speculative rise—to be succeeded, as was to be expected, by a continued gradual fall in prices, which has been spread over no less than seven months, and nothing can be more unsatisfactory than such a state of things to those who have to hold stocks. Nor have diminished earnings rateably been followed by an increased return, for the consumption for the first time in many years has fallen off considerably—thus showing that the crisis of 1866 has at last affected consumption by stopping speculative enterprise, and this cause, coupled with the high price of bread in the earlier part of the year, and the continued dearness of meat and butter, are, no doubt, sufficient to account for the disappointing decrease in the use of

sugar. One satisfactory point, however, is that the custom of "cutting in sugar," that is, of the retailers selling it at a loss or a little profit, appears to be rapidly diminishing, as the necessity becomes more apparent for obtaining a fair rate of profit on everything sold, instead, of making some article, like tea, a kind of scapegoat to bear the sins of others.

The statistical position of sugar at the beginning of 1868 was a strong one, but the margin for the refiners' profit was insufficient, while their stocks of manufactured goods were large. The result was that the refiners were completely out of the market, and a fall in raw sugar naturally followed, and during January, and up to the middle of February, amounted to no less than 3s. per cwt. took place, to be followed in March by renewed depression, when the new West India sugars began to arrive. The statistical position of affairs, however, continued strong, and an opinion began to be entertained that the produce markets would be the first to profit by a revival from the effects of the panic, and that sugar would be one of the first articles most affected, as the stocks were small, while prices were low. It appeared also that the stocks in the United States were exhausted, so that the early shipments from the West Indies would be diverted from Europe. Owing to the small turnout of the beet crop it was evident also that the continental refiners would not send much of their produce here. Although the promise of the European West Indian crops was very good, these considerations, aided by news of a terrific hurricane in Mauritius, and of great damage to the crop, led to a rise during April and the first half of May of 3s. 6d. per cwt. In the meantime the void in the United States stocks had been pretty well filled, and supplies from the large crops began to pour in here, while the grocers persisted in a curious hand-to-mouth policy which completely baffled the efforts of speculators. A fall then commenced, followed by a depression and a continuous decline in prices which has lasted to the present time. This has only been relieved by fears in the autumn of injury to the beet crops by drought and by rumors of the damage to be done to the next Cuban crop by the rising in the island, and by the not improbable emancipation of the slaves. The catalogue of successive falls continued through nearly seven months would be wearisome, and it is sufficient to say that the general raw sugar market closed 6d to 1s. lower than at the end of 1867. Fine grocery sugars which, however, are too rarely to be had to affect prices, and which are therefore not included in ordinary market reports, are fully 1s. dearer. Refiners' moist sugars are on the average 2s. cheaper, but the absence of foreign competition, owing to the smallness of the present and last beet crops has enabled them to maintain the price of their stoved sugars, at the same point as at the end of 1867. The same cause has also kept up the price of crushed.

With regard to the prospects of the market, the principal element of uncertainty is the condition of Cuba, which still remains very unsettled. At present we are not disposed to attach importance to the insurrection in the island, but should it reach larger proportions, the out-turn of sugar would no doubt be reduced. The possible decrease, however, we regard as too problematical to affect prices, at present, in a commodity affected by so many causes. The beet crops will again show a decrease, or only a slight increase, while the news from the British West Indies and Mauritius is not very good at present. So far, therefore, probabilities are somewhat in favor of prices; but, on the other hand, the consumption not only here, but in all the principal markets, taking them together, shows a considerable decrease, and no immediate prospect of a revival, while the stocks, already in excess, will shortly be reinforced by the new West Indian crops; there will, in all probability, be a considerable increase in the produce of Louisiana, which indeed will, it is said, be double that of last year, although not nearly up to the average yield before the civil war. Should Cuba settle down, an even larger crop than the last (which yielded an excess of no less than 150,000 tons) is looked for, while while we do not place much reliance on the fragmentary crop reports which come from the West Indies, and prefer to wait for actual results. The refiners also are not likely to be heavy buyers; and, on the whole, it seems to us that the immediate prospect of the price of raw sugar is downwards. No one, however, can pretend to foretell for any lengthened period the course of a market dependent entirely on the weather in fifty different countries, and on the very uncertain issue of the troubles in Cuba.

There has been no very marked advance in sugar machinery during the past year, and "Diffusion" and Mr. Fryer's Concretor are still the principal subjects of discussion among planters. The late controversy as to the desirability of cultivating the beet in England for sugar purposes, and its practical result in Mr. Duncan's experimental factory at Lavenham, as well as the successful introduction of its cultivation into the United States—the only stronghold of the cane left, besides England—together with the gradual progress of the sugar industry on the Continent, are surely sufficient to induce the closest attention to possible improvements on the part of cane growers. The wonderful results of central factories in the French West Indies, and the great dividends paid by them, contrasted with the abject and almost retrogressive position of our islands, are at last, we trust, attracting greater attention among our colonists. The very important question of improving the cane by selection has been taken up in earnest in Mauritius, where the plant appears to be exhausted, and in the West Indies the question of adopting the Salangore cane is also being discussed. What can be done by care in cultivation in manufacture is shown by the recent complete transformation of Guadeloupe, and on a lesser scale by our own colony of Demerara, where the yield has been raised from one to two tons per acre, while its sugar, from being the by-word of our market, has assumed the first place in it. The large proportion of raw white crystals, equal to the refines now made in the French Islands, raises the question whether the easy further step of putting up moulds and making loaf sugar cannot be carried out. Already in France loaf sugar is made direct from the beet at a less cost than raw sugar under the old process, and the question has at length arisen whether sugar refiners are not as unnecessary as a fifth wheel to a coach, and whether, in the course of time, they will not disappear. This however, will not, we trust, become a practical question for many years, as the refining trade has been anything but a brilliant one of late.

The refiners, generally, have been dissatisfied with the result of their labors during the past year, and, although the position of the loaf sugar makers is no doubt much better than it was a year ago, the pieces makers have still considerable cause for complaint. The London refining trade trade is certainly not a flourishing branch of industry at present, while rumors of difficulties among the Clyde refiners, in the course of the year, have shown that their apparently wonderful prosperity did not extend to the whole trade. In fact, in these days of competition, sugar refining is no longer a Sleepy Hollow where things can jog easily along, but, on the contrary, it has become a trade which only keen men of business can make pay. It is to be regretted, therefore, that so little improvement in the processes of the London refiners is to be reported, and that they still persist in their obsolete mode of manufacture, and in refusing to meet the wants of the time. As this is the case, however, it is by no means surprising that the proportion of the sugar trade done by London continues to decrease.

Those who lean upon a delusive support like the graduated sugar duties start from an unsafe position, and one which every day that passes renders more precarious. The Drawback Conve tion, by which the refiners of England, Fran Holland and Belgium, finding their hold on t trade slipping from them, entered into a soler league and covenant to protect and stand by ea other, has proved a deceptive protection, a although the weak places in its armor have ag been tinkered up, it is none the less unsat factory to those concerned, and is worthless a defensive weapon. We have not patience to det the incomprehensible negotiations at the Hag which, however, were carried on in a way qu characteristic of our Government's managem of the sugar duties, and consisted chiefly leaving the Dutch in full possession of th bounty on the import of Java sugar, leaving t touched the French bounty on French Colo sugar, the differential duties on foreign botto the protection of 1s. per cwt. against English l sugar, and evasion of the spirit of the convent which bound the French to adopt graduated ties. Such elaborate trifling is almost conte ble, and it becomes clearer every day that s antiquated diplomatic cobwebs cannot bind sugar trade, and that either a uniform duty better still, no duty at all, is the only solutio the sugar question. The latter solution has great weight given to it by Mr. Bright's breakfast table policy, which, as regards sugar not only practicable, but eminently desirable not only advancing free trade in general, bu releasing one of the most important articles food from the trammels which, as we have cently shown, probably treble its price.—*Produce Markets Review.*

Petroleum.

We condense the following statistics of important branch of trade from the annual rev published in the New York *Commercial Shipping List*:

Total exports from the United States for t years:

N. Y...galls.	52,803,202	33,834,133	34,501
Boston	2,410,114	2,264,121	1,591
Philadel'a....	40,505,620	29,437,429	28,811
Baltimore....	2,587,707	1,515,454	2,48
Portland.....	705,107	900	1
New Bedford	.. ..	.. ..	3
Cleveland....	270,000	.....	...
Total galls...	99,281,750	65,052,029	67,43
Equal to bbls of 40 galls..	2,482,044	1,676,300	1,68

Of the exports from New York in 1868, 6, 180 gallons were crude, 40,347,922 gallons ref 231,345 gallons lubricating, 5,526,920 ga naphtha, and 72,765 residuum.

Of the exports from New York in 1867, 2,570,000 gallons were crude, 29,950,000 ref and 1,364,000 gallons naphtha.

Of the exports from Philadelphia in 2,672,055 gallons were crude, 35,449,070 ga refined, 594,270 gallons lubricating, 3,20 gallons naphtha, and 52,920 gallons resid total 41,974,985 gallons, allowing 45 gallo the barrel.

Of the exports from Boston, 2,041,746 g were refined, 27,966 gallons lubricating, 340,402 gallons naphtha. Of the exports Baltimore, 177,390 gallons were crude, 1,50 gallons refined, 847,980 gallons lubricating 55,980 gallons naphtha.

The production of crude has probably averaged ,000 bbls. per day the past year, or about the me as in 1867, although the present yield is lieved to be not over 8,500 barrels per day. he stock held on the Allegheny River from Oil ty to Tidioute, January 1st, is 264,805 bbls. of gallons each, against 534, 600 same time in 67. Shipments from January 1 to December 1868; shipments of crude and refined of 45 llons to the bbl., by all routes, and the total ipments of crude for the same time are:

New York, bbls	877,251
Cleveland, bbls	814,882
Boston, bbls	106,811
Philadelphia, bbls	224,479
Portland, bbls	32,648
Pittsburgh, bbls	1,121,397
other points	221,677
Total bbls	3,399,145
fference between the rude and refined shipped bbls	109,670

tal shipments of crude of bbls. of 45 gallons each 3,508,815
tal production from January 1 to Dec. 1, 1868 (11 months), bbls 3,413,891
erage per day, bbls. 10,190

A later date, at hand after the above was itten, makes the total production from Janu- 1 to December 31, 1868, 3,715,741 bbls. of gallons, and the total shipments of crude, 27,063 bbls. of 45 gallons each.

The total capacity of iron tankage in the gion mentioned is 1,140,039 bbls., of which 7,534 are empty, of these latter, 244,410 in l City and vicinity, and 162,792 in Tidioute.

A BANK WANTED.—The St. John's *Morning News* of the 12th says :—

"The extent of the shaving operations in notes and sterling exchange, done outside the Banks is sufficient evidence of the necessity for the establishment of another Bank in our City. The operations in this line were never larger or more lucrative than at present, but the element on which we would lay most stress is that the business seems to be a comparatively safe one. It is nothing unusual to see good paper, the foundation of which is all 'leather,' being hawked around various offices in town, for discount, and ultimately, as the best that can be done with it, subjected to a shave of 12 or 15 per cent. With proper Banking facilities this ought not to be ; and we are surprised that the commercial community submit quietly to such usury."

The remedy lies in the hands of our merchants —let them represent to some first-class Canadian Banks the field open here for their enterprise, and we are assured the shavers and curb-stone bookers will speedily find their occupation gone.

To Mercantile Men.

THE NEW POCKET REFERENCE BOOK OF THE MERCANTILE AGENCY revised to Christmas, and containing 35,000 names of Traders in the Dominion, is now out of press, and ready for delivery.

Subscribers having Travellers out, or about leaving, should avail themselves of this indispensable volume.

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY,
EDWIN W. BRYANT, ACTUARY,
GUY. R. PHELPS, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,863,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,836 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREE—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

3-1

Montreal House, Montreal, Canada.

TO MONETARY MEN.—Merchants, Insurance Agents Lawyers, Bankers, Railway and Steamboat Travellers Mining Agents, Directors and Stockholders of Public Companies, and other persons visiting Montreal for business or pleasure, are here by most respectfully informed that the undersigned propose to furnish the best hotel accommodation at the most reasonable charges. It is our study to provide every comfort and accommodation to all our guests, especially for gentlemen engaged as above. To those who have been accustomed to patronize other first class hotels, we only ask a trial; we have the same accommodation and our table is furnished with every delicacy of the season.

H. DUCLOS.

Canada Life Assurance Company.

CAPITAL AND CASH ASSETS

OVER $2,000,000.

SUMS ASSURED

$5,000,000.

A COMPARISON of the rates of this Company with others cannot fail to demonstrate the advantage of the low premiums, which, by the higher returns from its investments, it is enabled to offer.

IF PREFERRED, ASSURERS NEED ONLY

PAY ONE-HALF OF EACH YEAR'S PREMIUM IN CASH,

during the whole term of policies on the 10 payment plan, or for seven years on the whole life plan.

For the unpaid portion of premiums,

"NOTES" ARE NOT REQUIRED BY THIS COMPANY

so that assurers are not liable to be called upon for payment of these, nor for assessments upon them, as in the case of Mutual Companies.

Every facility and advantage which can be afforded are offered by this Company.

Briton Medical and General Life Association,

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the Lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

Etna Fire and Marine Insurance Company of Dublin.

AT a Meeting of the Shareholders of this Company, held at Dublin, on the 13th ult., it was agreed that the business of the "ETNA" should be transferred to the "UNITED PORTS AND GENERAL INSURANCE COMPANY." In accordance with this agreement, the business will hereafter be carried on by the latter Company, which assumes and guarantees all the risks and liabilities of the "ETNA."

The Directors have resolved to continue the CANADIAN BRANCH, and arrangements for resuming FIRE and MARINE business are rapidly approaching completion.

PROSPECTUS OF THE ONTARIO PEAT COMPANY

LIMITED LIABILITY. - - - - - - - HEAD OFFICE—TORONTO.

To be Organized under the Act 27 and 28 Victoria, Chapter 23, and the Amendments thereto.

THE property of the company forms a portion of the well-known "Cranberry Marsh," in the Townships of Humberstone and Wainfleet, County of Welland, and Province of Ontario, traversed by the Welland Canal, as well as by its "Feeder," which is also navigable; and is composed of the following lots, viz. :—

	Acres.
Humberstone—South halves of 28, 30, 32 and 33, Concession IV	400
Wainfleet—South halves of 6 and 7, Concession IV	200
" Whole of 10, Concession II, and the whole of 10 and 11, Concession III	600
" Parts of 8 and 9, Concessions IV. and V., about	200
Total	1400

A main ditch six feet deep has been made by the County through the whole of this Marsh for surface drainage, at an expenditure of $50,000; and this ditch runs along a portion of every one of the above lots, except two which abut upon the feeder of the Welland Canal.

The several lots above enumerated were the first chosen from the Marsh, having been selected for their great value as Peat Deposits. The remaining Peat lands have been obtained by the Anglo-American Peat Company, which has been operating most successfully during the past season upon a lot adjoining one of the Company's lots. A most satisfactory report has been obtained from Frederick Holmes, Esq., the County Engineer—a gentleman who has had large experience in these peat lands, having not only surveyed and laid off the Marsh into lots for the County, but has also been employed as superintendent in the ditching operations which have been undertaken and carried out through the whole extent of the Marsh. His estimate of the quantity of Peat contained in the Company's lands is placed at three millions of tons, at the very least; and this estimate is fully borne out by the eminent firm of Messrs. Macdougall and Skae, Civil Engineers, Toronto, who were specially despatched to make a personal examination of the property, and whose report is subjoined.

Peat can be laid down on the banks of the canal at the cost of from $1 to $1.25 per ton, and can from thence be forwarded by water to market in all directions, at small cost, and without transhipment; to say nothing of the facilities and advantages afforded by no less than five railways, one of which the "Buffalo and Lake Huron," passes within twenty chains of the property. In addition to these advantages, the fact may be noticed, that about thirty vessels pass through the canal every day during the season of navigation, the steamers requiring fuel for their own use, and the sailing vessels seeking cargoes, and requiring ballast westward to Chicago and other points.

The demand for this fuel for private consumption will be very great when its superior qualities become more widely known. Already railways and steamers are beginning to use it instead of wood and coal, with the most satisfactory results, experience having proved that one ton of peat is equal to about one and one-third cords of the best hard wood. With a view to the full and proper development of this property, it is proposed to organize the Company with a capital of $120,000, in 2,400 shares of $50 each; $50,000 of this sum to be retained by the Directors for working capital, the balance to be applied to the purchase of the real estate. It is also proposed that 5 per cent shall be paid at the time of subscription, and the balance in calls of 10 per cent at such times as the Directors may name, but not oftener than once in every three months, from 1st of January, 1869.

The affairs of the Company will be managed by a Board of five Directors, the first set to be provisional, and, as soon as the charter is obtained and the Company organized, the permanent Directors to be chosen by the Shareholders, and to be elected annually.

The principal office of the Company to be in the City of Toronto. The property has been conveyed to Peleg Howland, Esquire, who will hold the same in trust until the Company is organized

PROVISIONAL DIRECTORS.

HENRY S. HOWLAND, Esquire, Toronto. JOHN FISKEN, Esquire, Toronto. LARRATT W. SMITH, Esquire, Toronto.
ALFRED TODD, Esquire, Ottawa. EDWARD A. C. PEW, Esquire, Welland.

Further information can be obtained at the office of C. J. Campbell, Esquire, Banker, 92 King Street East, Toronto, who will act as Provisional Treasurer, and will also receive subscriptions for Stock.

CHAMBERS, 17 TORONTO STREET, TORONTO, JANUARY 11, 1869.

To the Directors of the Ontario Peat Company,—

GENTLEMEN,—We have the honor to lay before you the following report, on the Peat Beds in the Great Cranberry Marsh, situated in the County of Welland. The swamp, or to call it by a more proper name, moor, for it is more like the moors of Scotland than the swamps of this country, intersected by a large drain, which at present carries off a considerable quantity of water; and from its juxta position, to the lots owned by your company could be made available for drainage purposes. The moor rises gradually from its northern limit in concession 4, to its summit, at the south end of concession 3, about four feet on two and a half miles, where it is about eight feet above the level of Lake Erie; while, on the north, from the end of the moor to the Welland River, distant about a mile and a half, there is a fall of sixteen feet. Following the course of the water through the various drains, the result arrived at is, that the moor is higher than the surrounding country, which is under cultivation.

The peat on this marsh, brought up by the boring rods, as well as that lying on the sides of the drains, thrown up when they were made, shows good quality of a dark black color, in every lot. There is a layer of red peat in some of the lots of the Township of Humberstone; but generally the peat was of the dark colour above mentioned. The surface of the marsh, or moor, has been burnt once or twice, so that there is not much moss or up growth, nor are there many trees alive; and on the lots owned by your company this is more marked. The lots are conveniently placed for working and connections could be formed, at a small cost, to the several outlets that surround this tract of land; and the surface being regular, no difficulty would be encountered in laying tramroads.

In making the borings for this report, the valuable assistance of the County Engineer, Mr. Frederick Holmes, was obtained, as he had superintended the making of the drains, and had laid out several of the lots some years ago, and since that time had been intimately acquainted with the moor. The depths arrived at give an average of six to eight feet of peat over all the lots in the 3rd and 4th concessions, while in the lot of the 2nd concession of the Township of Wainfleet, the peat is very deep, averaging about 15 feet, and it is said to go even deeper. There are 200 acres in this lot.

The regularity of the upper surface of this large tract of land, both peat and arable, being combined with the result of the borings taken, tend to the conclusion that the bottom of the peat bed must also be regular, as there are no hills or mounds of any size or consequence in the vicinity.

The Anglo-American Peat Fuel Company have been at work during last summer on a portion of this marsh, opposite to some of the lots owned by your Company. They find the loss, by weight and shrinkage to be 75 per cent.; or to make one ton of peat fuel, four tons of peat are required. This is less than that of a similar project in the Lower Province, where the shrinkage is 85 per cent.

From the data and experience of the Anglo-American Company, taking the loss by weight and shrinkage at 75 per cent., with an average of from six to eight feet over all the lots, but that in the 5th Concession of Wainfleet, which is taken at sixteen feet, we find the property of your Company situated in the marsh, to be capable of producing over 3,000,000 tons of fuel.

A fuller report, by us, lies in the hands of Mr. C. J. Campbell, Banker, King Street, Toronto, to which also we beg to call your attention.

We have the honour to be, gentlemen,

Your obedient servants,

MACDOUGALL & SKAE.

Mining.

NOVA SCOTIA GOLD FIELDS.

(From our own Correspondent).

HALIFAX, Jan. 19, 1869.

The general returns for December are coming in but slowly, and the subjoined three are all that have been at present received at head quarters from the several deputy commissioners.

	Sherbrooke.			*Wine Harbor.*			*Isaac's Harbor.*		
	oz.	dwt	gr.	oz.	dwt	gr.	oz.	dwt	gr.
Total Gold yield,..	522	2	6	114	0	9	5	0	0
Aver. per 2000 lbs.	0	8	8	0	6	4	–	–	–
Maximum	1	2	17	0	14	16	–	–	–
Alluvial Gold	–	–	–	–	–	–	5	0	0
	tons.	cwt.		tons.	cwt.		tons.	cwt.	
Quartz raised.....	1250	0		353	7		137	0	
Quartz crushed....	1249	5		353	7		—	–	
Day's work.....	5000			2562			1100		
No. Mines worked.	23			5			5		
No. of Mills	10			4			2		

It will be seen that the amount of alluvial gold from Isaac's Harbor is quite insignificant, and fully justified the cautions contained in the late *Mining Gazette*. The existence of alluvial gold was indicated by Mr. Campbell in his Reports to the Government in 1861 and 1863, and proved by subsequent workings in 1863–4; but it is not so abundant as to warrant any unusual interest, still less the excitement sought to be awakened by the designing and unprincipled parties who spread the report that an expert washer could easily earn an ounce a day. The true average from one property is under 80 cents., and from another about $1.20 per day, to the man, which is not even laborer's wages. The yield might be increased with sluices, but the results of the past five months tells of "much cry and little wool."

WAVERLEY.—Professor Hind's geological plans and sections are finally completed, and pass to-day into the hands of the lithographer. It is to be hoped that other districts will receive the benefit of careful professional examination, which, if it result in no other good, helps to awaken discussion and draw attention to the district reported upon.

UNIACKE.—The returns for December are not all received. Investors, however, will be glad to hear that the Montreal Gold Mining Association again figures among the productive holders, Mr. Robertson, the new manager (late of the Richardson mine, Madoc,) having brought up last week 44 ounces, the produce of 90 tons of quartz, raised from a depth of 75 feet. As soon as the other shafts are pumped dry, the works on this property will be vigorously prosecuted, which, it is hoped, will be an example to the owners of the eastward adjoining claims. In the absence of the deputy's report, the following statistics from the managers' sworn returns, for the quarter ending 30th Sept. last, may not be without interest.

The Mount Uniacke Co., with 4,074 days labour, raised 490 tons of quartz, and produced 345 ozs. 6 dwts., gold. The West Lake Co. produced 130 ozs. 9 dwts. from 630 tons, raised by 2,207 days labour. The Queen Co. obtained 239 ozs. 9 dwts. from 512½ tons and 4,297 days labour. The Central Co., from 23 tons, obtained 35 ozs. 3 dwts. with 383 days labour. The lodes worked by the Queen Co. are so wide, compared with that of the Central Co., that the yield is but little less remunerative. There has been much dispute about the belt of lodes, south of the Union Co. claims, not bearing gold in appreciable quantity, for which reason several bands of parallel lodes, (many of considerable width) below the designated property, and extending into block seven, were, until last fall, entirely neglected. The refutation of this theory has now been given by practical results. 7 tons of surface quartz, from the so-called La Mothe areas, having just passed through the mill to yield a little bar of 5 ozs. 2 dwts. Solid arguments of this kind outweigh fanciful theories and ignorant prejudice. This, however, is not the first crushing from these lodes, as the claims to the east were sunk upon to the depth of 35 feet, and from 38 tons, crushed last winter, under very unfavourable circumstances, produced an average of 9 dwts. Still further south, as far as 1,500 feet from the boundary of blocks two and seven, gold has been obtained by hand mortaring the surface quartz; so that if the district continues in favour, there is yet a large area in that direction worthy the attention of explorers.

AN OPINION FROM NOVA SCOTIA.

"A MINER," writing recently to the *Acadian Recorder*, tried to make it appear that the granting of charters favored the establishment of bubble mining companies, although an official act of incorporation has as little influence upon the morality of promoters as Tenterden Church Steeple had in the creation of Goodwin Sands. The writer cited two instances of public extortion,—in the formation of the Honey-Suckle and Bumble-Bee Companies of Bulliontown, Nova Scotia,—from an exposure contained in the Canadian *Monetary Times*.

The promoters of one of these companies pocketed eighty thousand dollars for an area that cost them *(palm-grease excepted)* about two thousand five hundred dollars!

By a singular coincidence, the *Recorder* has been selected for a notice of the Woodland Gold-mining Company, of Goldenville, originally the Woodbine Company, which by a still more singular coincidence, through synonomy of title and locality, was assumed to be the subject of a "A Miner's" animadversion.

An average of five ounces per ton is claimed as the result of the last crushing; but as the amount of ore is not stated in the *Recorder's* notice, the omission is here remedied, and the actual average given of previous millings:—

Tons Quartz.	Yield Gold.			Av. per Ton.		
	oz.	dwt.	gr.	oz.	dwt.	gr.
69½	7	12	2	...	2	5
9¼	4	6	0	...	9	...
5¼	1	0	22	...	3	19
3	16	13	6	5	11	2
87¼	29	12	6	0	7	2

This property would have to maintain a continuous yield of five ounces to the ton on two thousand tons of ore before it can pay dividends, on

account of the high price for which it sold ; and the present comparison is not made in disparagement, but merely to prevent shareholders in Nova Scotia gold properties from making invidious distinctions between districts, or expecting a uniformly high yield from the most favorably represented, best managed, or even most dearly-purchased mine.- *Halifax Reporter.*

MARMORA IRON MINES.—The Company working these mines have contracted to get out 60,000 tons of ore in 1869, and 100,000 tons in 1870. The company owns 23,000 acres of land, and 150 men are kept at work. The ore is loaded on cars at the mine, is then run to the river, where it is dumped on the decks of scows, which are towed by steamers to Harwood, again loaded on the cars, and dumped into the holds of schooners at the Cobourg harbor. The whole cost of mining, railway carriage, lake freight, and American duty, we understand, is a little under $4 per ton, while the price ranges from $5.50 to $8 per ton in gold. The market is at Pittsburgh.

Insurance.

FIRE RECORD.—Hamilton, Jan. 23.—A fire occurred in Reid's cabinet manufactory, King-st. West. The building was quickly gutted. The fire was confined to the building in which it originated.

Hamilton, Jan. 21.—The sheepskin tannery of Messrs. Humphrey and Newberrry, east end of the city, took fire, and the building being a very old frame one, and all as dry as tinder, was speedily consumed. 7000 lbs. of wool, about 1000 manufactured sheepskins, with tools, machinery, &c., were destroyed. Loss on stock estimated at $7,000 ; insurance $2,000. The loss of Mr. Wm. P. Moore, the owner of the building, is covered by insurance. An exchange says : The firemen were promptly on hand and did their duty, but the hose proved wretchedly inefficient ; and it is surely made plain enough at last that the hundreds of thousands which the water-works cost must not be left useless for putting out fire for the want of a small amount spent on hose. It is like letting the horse and rider perish for want of a nail in the shoe. The water is there, enough to drown out, in a very short time, any fire within its reach ; but there must be good hose, and plenty of it, to turn the water on with. A fire also broke out at half-past four this morning, at L. D. Sawyer & Co's Agricultural Implement Works, to the east of the city, and outside the limits of water supply from the works. It commenced in the blacksmith's shop, and some thousand of dollars worth of patterns and parts of machines were destroyed. Loss covered by insurance in the Ætna and Hartford Companies. The stone walls are not injured, and the burnt portion of the works will be renewed without loss of time. The firemen did good service, and to their exertions it is due that the Canada Felt Hat works, immediately adjoining were saved. But for the fact that the shingles of the roof were laid in mortar, this building would have gone, too.

This afternoon a fire broke out in the bellows factory of Mr. James Dallyn, down James-street, between Murray and Concession-streets. The firemen were promptly on hand, and the fire was quickly subdued, though here, as at the tannery, the inefficient condition of the hose was much against their efforts.

Watson's Corners, North Lanark, Ont., Jan. 15. —A fire broke out in the general store of William Horn, by which he suffered to the extent of $2,500. The Perth *Courier* learns that not a dollar's worth of anything was saved—the entire stock of goods and the books of the establishment being consumed together. There was no insurance on the goods or the building. No clue as to the origin of the fire can yet be arrived at.

St. Vincent, Grey Co., Ont. Jany. 16.—A barn belonging to Jas. Grier, on a lot near Griersville, rented by Mr. Byers, was burnt to the ground, together with about 300 bushels of wheat, some pease, hay, straw, &c., and a few hogs. The building is said to be insured for $600 by the owner, and the contents for $200 by the tenant.

Township of Stamford, Ont., Jany. 15.—L. S. Lundy had two stacks of good hay, of about 30 tons each, set fire to by some miscreant. No insurance.

Percy, Ont., Jany. 13 & 15.—A correspondent of the Trenton *Courier* informs that journal of two fires which took place in Percy, on the 13th and 15th inst. The first was the total destruction of Massy's saw-mill, near Warkworth ; and the second that of Hay's residence, at Oak Hills. There was no insurance on either buildings, and the loss in each case is said to be heavy.

Odessa, Ont., Jany. 20.—The barn, sheds and stables of Mr. K. Booth, containing a large quantity of grain, hay, straw, &c., were totally consumed. Two valuable cows were burnt in their stalls. Loss estimated at $1000. No insurance. The fire is said to have been caused by straw igniting from a lighted candle used by one of the farm hands in the stable.

Riviere du Loup, January 21.—Marchand's Hotel, at this place, was burned down. Three of Marchand's children, and Mr. Wallis, civil engineer, of Quebec, perished in the fire. Mr. Johnson escaped, though somewhat injured. Everything is lost, including the office. By this fire the Intercolonial Railway Office at Riviere du Loup, with all the plans, is destroyed. They will be replaced at once. No insurance.

Seaforth, Jany. 21.—A fire broke out in the stables attached to Cardene's bakery, which consumed the stable, two horses, one cow, a quantity of hay, and one light wagon. No particulars as to insurance.

St. Catherines, Jany. 19.—A fire was discovered in the large stable in rear of Vanderlip's Hotel. By tearing the burning portion away, with a few buckets of water placed the barn out of danger. Cause unknown.

St. Catherines, January 16.—House of Mr. D. Bessy, near village of Homer, had the roof burnt off.

Caledon, East, January 15.—Barn of Henry Smith, and contents, together with a valuable mare and colt. Loss $500; insurance $300.

Bronte, Jan. 17.—A second ineffectual attempt was made to fire the store of E. C. Thompson & Co. The fire had been kindled on the outside of the building, opposite a small opening in the cellar, intended for a water-pipe. Close to this hole, on the inside, was a quantity of oil, which fortunately did not ignite. The Milton *Champion* says Mr. W. Thompson, one of the firm, had a narrow escape from being suffocated by smoke. Nothing but the hard work and good will of the Brontonians saved the building and its contents from total ruin. Goods are somewhat damaged by smoke. Damage about covered by insurance—some $300 or $400.

Kingston, January 21st.—An explosion took place in one of the stores of Mr. Overend's building, occupied by a glass blower, shattering the windows and throwing down the partitions. This and the adjoining shop of Mr. Ireland, engraver, were consumed; nothing saved. The fire spread to the adjoining property: White's store is completely gutted; Meyer's and Cannon's partly so; but Hewitt's is not injured. None of the tenants had any insurance whatever; Branigan's was insured for $2,000 on the buildings, which will about cover his loss. Overend has $1,400 insurance on his building (stone) but Ireland had none on his stock, materials, or household effects. The Glass Blower loses his stock also. Cause of explosion unknown.

Beverly, Ont. Jan. 17.—The two-story frame dwelling of William Henry, near Westover's Corner's took fire from a defective stove-pipe, and was entirely consumed, together with a large portion of the furniture and effects of the family. addition to other property that fell a prey to flames was $1,500 in bank bills. Mr. Henry an insurance of $1,500 in the Gore District tual. The loss is estimated at about $3,000.

St. Catherines, Jan. 27.—The Welland H stables and E. McCarty's house; the former sured for $400 and the latter for $600.

Toronto, Jan. 27.—Jackson's Hotel on road; was valued at $2,000.

APPOINTMENTS.—Mr. William Brooks, many years connected with the Northern In ance Company, has been appointed assis manager to the Progress Insurance Comp We learn that Mr. William Beaman has appointed assistant secretary of the Briton Me and General Life Assurance Association, an the Brittania Fire Association. Mr. Beaman filled the office of chief clerk to the Brito several years past.—*Insurance Record.*

ENGLISH OFFICES.—We find in the *Post M zine Almanac* the following list of companies have transferred their business in 1868 :— cable Mutual to United Ports ; British Mutu Providential ; Etna to United Ports ; Ge Provident to Etna ; International to Herc London and Northern to National Widows' F National Union to Great Britain ; Uncondit to British Alliance. The same authority gi list of companies which have been founded d the past year, including a number of "ephe companies,"—Alexandra, Britannia, British perial, Commercial Indemnity, Economic General Accident, Life Insurance Union, L pool, London and General Accident, Mas Monarch, and United Ports.

— It appears from an official memorandum the whole of the shares lately offered to the p by the Britannia Fire Association having taken up, they have now commenced busin conjunction with the Briton Medical and Ge Life Association.

—A new Company, styled the *General Ac and Guarantee Co.*, has been started in Eng C. Harding, Manager.

MODE OF VALUING ASSURANCES

The Annual Premium of each existing Assu is to be taken, not however the Annual Pre payable for the Assurance according to the of the original contract, and which is in fa actual Premium which is paid continually, b higher premium which would be chargeable under the supposition that it now was to be for the first time, and therefore at the which the life upon which it is is to be mad advanced.

This done, then the amount of the origin real Premium is to be subtracted from the a of the supposed higher Premium as above the remainder is to be put down. The p value of such remainder is now to be found Society's Annuity Tables, treating it as an A payable during the life from the age at whi life the Assurance is made has now arrived date of the valuation ; and whatever may amount of the value of this Annuity, such amount of the value of the Assurance a time.

Assume that an Assurance for £1,000 was out on the 1st of June, 1856, upon a life ag The Annual Premium for this Assurance is £ and that will be the amount ever payable and no more.

Five years have passed away, and 1st 1861, has arrived, which is the time fix valuation of Assurances and distribution o plus Capital. Now in valuing the Assura above on 1st June, 1861, the Annual Prem be paid for it was considered to be the Premium payable at the age 29, which is £ 0d. Substracting £19 10s. 0d. from £22 1

remainder of £3 is left. Finding now the present value of an annuity of £3 per annum, payable during a life aged 29, such was the present value of the Assurance as above on 1st June, 1861.

Again, the same Assurance being valued on 1st June, 1866, the Annual Premium to be paid for it was considered to be that payable at the age 34, which is £25 15s. 0d. Substracting £19 10s. 0d. from £25 15s. 0d. the remainder left is £6 5s. 0d. The present value of an annuity of £6 5s. 0d. payable during a life aged 34 was therefore the value of the Assurance as above on the 1st June, 1866.

Again, when the same Assurance is to be valued on 1st June, 1871, if then on foot, the Annual Premium to be paid for it will be considered to be that of the age 39, which is £30 1s. 8d. Substracting £19 10. 0d. from £30 1s. 8d. the remainder left will be £10 11s. 8d. The present value of an annuity of £10 11s. 8d. payable during a life aged 39 will therefore be the present value of the Assurance as above on 1st June, 1871.

And again, when the same Assurance is to be valued on the 1st June, 1866, if then on foot, the Annual Premium to be paid for it will be considered to be that of the age 44, which is £35. Substracting £19 10s. 0d. from £35, the remainder left will be £15 10s 0d. The present value of an annuity of £15 10s. 0d. payable during a life aged 44 will therefore be the present value of the Assurance as above on 1st June, 1876.

And now, passing over twenty-five years during which the value of the Assurance will be continually increasing year by year, in valuing it on the 1st of June, 1901, if still on foot, the Annual Premium to be paid for it will be considered to be that of the age 69, which is £108 18s. 4d. Substracting £19 10s. 0d. from £108 18s. 4d. the remainder left will be £89 8s. 4d. The premium value of an Annuity of £89 8s. 4d., payable during a life aged 69, will therefore be the present value of the Assurance as above on 1st June, 1901.

Now when every Assurance on foot at the time of valuation has been valued according to instances given above, and the values of all of them summed up, the total will be the amount of capital required to be in the possession of the Society, and to be held in reserve to meet its liabilities; and whatever capital in excess of such amount may be found in the possession of the Society will be "Surplus Capital."—*Post Magazine.*

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There was an average business done this week, and stocks generally close firm and in good demand.

Bank Stock.—Montreal sold during the week from 139 to 140, the market closing with buyers at 139¾. Ontario has been freely dealt in at 100 and 100¼; closing with sellers at the latter rate. No sellers of Toronto; buyers at high rates. There are buyers of Royal Canadian at 85 for stock all paid. Considerable sales of Commerce occurred at 102 and 102½; there are sellers now at the latter rate. Buyers offer 39 for Gore; very little doing in market. Merchants' has advanced to 108¼, at which rate there are buyers, but no sellers. For Quebec 98 would be paid; sellers ask 100; no sales. Sellers ask 110½ for Molson's, with buyers at 110. Sales of City occurred at 100¼, at which rate the stock is still procurcable. Buyers offer 99 for Du Peuple; no sellers. Nationale would be taken at 106, and Jacques Cartier at 107; none offering. There are buyers of Union at 103, and sellers at 103½. Nothing to report in other banks.

Debentures.—No Canada bonds of any kind offering. Sales of Dominion stock were made at 105, 105¼ and 105¼. Toronto are much enquired for; none in market. A few small lots County have been placed at par.

Sundries.—No transactions in City Gas for some weeks. For a round amount of Canada Permanent Building Society 124 would be paid; last sale at 123¼. Western Canada Building Society has advanced 3 ℔ cent. since our last; considerable sales have taken place at 117 to 118. Sales of Freehold Building Society were made at 106½, 107 and 107½; there are some buyers but no sellers at the latter rate. There are buyers of Montreal Telegraph at 134, and sellers at 135.—Canada Landed Credit is asked for at 72; little offering. A few good mortgages were placed at 8 ℔ cent. There is a fair supply of money on good security.

THE LONDON MONEY MARKET, 1868, 1869.

The financial course of the past year, as was the case with that of its predecessor, has precisely realized the anticipations expressed at its commencement. A fair harvest and the avoidance of war were the only conditions requisite to insure a steady continuance of low terms of discount, and an uninterrupted though slow recovery in trade. For the year now commencing the prospect is equally or rather more satisfactory. Every month that places us further from the disastrous recollections of 1866 increases the healthy power of the nation for the development of its natural commercial vigor.

It is true that the recent rise in the bank rate from 2 to 3 per cent., in consequence of the heedless welcome given to foreign and colonial loans, has thrown, for the moment, a damper over Stock Exchange speculation. But this has been salutary. There is a total absence of danger of any persistent run of folly. The public may be tempted by adroit manipulation to go on up to a certain point; but so fresh is their sense of past penalties that the moment the slightest check happens they fall back scared, as if another general convulsion were at hand. In the present instance, the simultaneous occurrence of the contemptible Greek complication has been sufficient to cause a fall in the nominal value of all convertible property equal to that which might ordinarily occur from any severe political or commercial disturbance.

Hence it would seem that, instead of any further immediate increase in the value of money. Several of the foreign and colonial returns of the past year remain to be paid up, but the introduction of new ones being in some degree stopped, the demands thus occasioned can well be met by the surplus income always flowing into the country in the shape of dividends on the securities already existing. Looking at the sums standing in Indian railways, Australian and Canadian Government guarantees, United States bonds and foreign loans generally, these payments are now of extraordinary magnitude, and make a yearly total, in addition to the regular profits of the national trade, such as to necessitate a constant outlet through fresh loans and ventures.

Estimating the consol and railway dividends now falling due, together with the foreign dividends and sinking funds to be remitted hither, it may be calculated that a sum of at least twelve or fifteen million sterling will find its way into the hands of the investing public within the next few weeks, and the portion of this to be received from distant sources will certainly be ample to provide for the outgoings for recent commitments.

Still, so long as the rate for money in the London market is below its normal point of 3½ or 4 per cent., the tendency must be always toward an advance, and consequently every check like that now in operation is certain to be succeeded by a reaction. A momentary renewal of ease will instantly be taken advantage of by new contractors and operators, soon to be checked by a fresh fright, again to be followed by a further series of recoveries and checks until the supply of capital shall have been reduced so as to cause its employment at home to yield an average return. The tendency to a rapid restoration of our rate of discount from any extreme point, such as two per cent., on the one hand or ten per cent. on the other, is singularly stimulated both by the diffusion of telegraphic communication and the general increase of intercourse among the various financial centres of the world. As regards America, for instance, the system of borrowing money on United States securities in London, Paris, Frankfort and other European cities, whenever the difference between their rates and those of New York is sufficient to present an inducement, is every day coming into more extended operation, and cannot fail to have an important influence in equalizing the current terms at all the Exchanges. For the next few years, therefore, the prevalence of fair average rates may, in the absence of exceptional influences, be safely relied upon.

Meanwhile, as regards the intrinsic values of fixed properties, there is a silent and inevitable process still going on, which attracts but little attention from year to year, but is more powerful in its effect than any other. The increased production of the precious metals is in undisturbed operation, and although by some circumstances its influence is gradually lessened, there are others by which it is augmented. On the one hand, in proportion as the stock of gold has been added to during the last twenty years, the power of any given amount to produce an effect upon it is diminished, since, supposing the total supply in the world to be only 200,000,000, an addition of 200,000,000 would reduce its value 50 per cent., whereas after this had occurred a further addition of 200,000,000 would cause a reduction of only 25 per cent.; but, on the other hand there is the fact that new sources of supply are being constantly discovered, including, if the accounts from the Far West may to any extent be trusted, deposits of silver of an apparently inexhaustible character, while at the same time the progress of science is constantly simplifying the methods of extraction. The circumstance that the absorption in India, which for a period had some considerable effect in retarding the changes in question, is now less active, is also to be taken into account, as well as the constant economizing of the circulation of the leading commercial countries by the resort to processes which save the passage of coin.

As regards incitements to adventure and trading enterprise, the new year is likely to offer enough for the most ardent minds. The completion of the Pacific Railroad which is to be accomplished by July next, and which, through an extent of over 1,000 miles, will bring new regions into the full tide of civilization, and at the same time, perhaps, revolutionize many of the existing relations of the Eastern and Western hemispheres, cannot fail to present openings such as will be the commencement of changes that must materially influence the destinies of future generations. Perhaps among its minor and transitory consequences will be the furnishing of the materials that during the next few years will have to be cultivated in preparation for the panic to fall due in 1876.—*London Times.*

BANKING BALANCE-SHEETS.

As the half-yearly meetings are now being held, it may be useful to call attention to some points connected with banking balance-sheets, although it appears to be generally understood that the Board of Trade will bring forward a measure, at the earliest convenient opportunity, to enforce uniformity. The form of balance-sheet is therefore of the most importance, and we think shareholders would act wisely in throwing out some suggestions, as to the propriety of separating the drawing accounts from the deposit accounts. They should also inquire what amount of bad debts have been written off during the half-year, and what have been created during the half-year, and

how much is the total now outstanding under the head of bad debts. Then the amount of overdue bills should on no account be concealed, as has been clearly established in the examinations at the Mansion House, during the past week, into the case of Overend, Gurney & Co., limited. The amount of loans on which the interest is in arrear should also be clearly stated, and it might be prudent to ask what amount is owing by directors for loans and bills discounted, as managers have often very little power of ascertaining the worth of the security offered by members of the Board when they decline to answer questions. The amount lent on shares in companies is a very important subject for inquiry, and when money has been advanced on a company's own shares, it is obvious that it is a diminution of capital rather than a loan. Auditors should be able to certify that the balance-sheets which have been placed before them, and they should also have the advances so classified that they can easily separate the loans on goods and warrants, the loans on land and houses, and the loans on stock or shares in various companies. The present opportunity should not be lost of endeavoring to place before the Board of Trade all information likely to secure the most accurate details.—*Investors' Guardian*

CANADIAN GOVERNMENT SECURITIES.—The following table exhibits the fluctuations in Canada 5's & 6's for 1868:—

	5 per cents. Jan. & July.	6 per cents. Jan. & July.

SAVINGS BANKS.

Mr. Keyes, in his report to the N. Y. Legislature, says: If a savings bank were subject to no contingencies in its business, if it were possible to protect every institution from any probable loss, no surplus would be required. But this we have shown and know to be impractible. The profoundest wisdom, the most pretending sagacity the most consummate financial skill, is vain to place any one of these institutions upon a basis of absolute exemption from loss. These qualities with strict integrity and conscientious care, may greatly diminish the chances of misfortune, but cannot eliminate them altogether. It must needs be that, sooner or later, slight and heavy losses will come. A bank of issue in which savings deposits are kept may fail, a claim for insurance may be successfully resisted, skilful burglars may get access to the cash, investments must sometimes be made at a premium that only return par on the day of redemption, or securities must sometimes be converted at a discount to meet unexpected emergencies. In these and many other ways which we need not enumerate, savings banks are exposed to perils, which all cannot be so fortunate as to escape. We can only guard against needless exposure to these perils, and provide a means whereby the severity of the misfortune, when it comes, shall be greatly mitigated; means that will enable the institution to sustain its losses without impairing its ability to meet in full the demands of every depositor. But this can only be done by the accumulation of a surplus of assets over all liabilities for the purpose of meeting such contingencies. In no other way can perfect security against loss be secured to the depositor. In this way it can be assured; and yet, strangely enough, the provisions of the statutes in regard to this surplus, upon which the security of the depositor so greatly depends, are only permissive. If anything connected with the management of savings banks should be obligatory this should be. If anything the discretion of trustees should be controlled by law, this, upon which so much depends, should surely be thus controlled.

On the question of the rate of interest to be paid to depositors, in connection with the formation of a surplus fund Mr. Keyes says,—

No savings bank should be permitted to declare more than five per cent. dividends until it has accumulated a surplus of at least five per cent. of its assets.

With regard to savings banks to be organised hereafter, such a provision is practicable, and would have the salutary effect of checking the mania for organising such institutions in localities already sufficiently accommodated. To make such a requirement of savings banks already organised, might lead to consequences not only perilous to their own integrity, but embarrassing in kindred institutions. Concerning these, it will be better to leave them at liberty to declare such dividends as they can, from actual earnings, after paying necessary expenses, and putting aside one-half per cent. per annum to account.

STERLING EXCHANGE.—The course of sterling exchange for three years is shown by the following figures, which represent the bank selling rates in Toronto, on the 1st and 15th of each month:—

	1866.	1867.	1868.

The name of Mr. Buchanan, of the late agency of the Bank of Montreal, at St. Catherines, is mentioned in connection with a vacant managership at Brantford. Much sympathy is expressed for him on account of the robbery of his agency.

The Lightning *Express* says there is no better point in the great North-West peninsula for banking agencies, than Elora, and calls loudly for more banking accommodation than is afforded by a country Agency of the Bank of Montreal.

INDEBTEDNESS OF BELLEVILLE.

The Mayor of Belleville in addressing the Council on Monday last made the following statement:

The present indebtedness of the town in the form of outstanding debentures is about $54,000 which is made up as follows, viz:

A debenture overdue, bearing 8 per cent. interest.....	$ 5,00
Debentures to Trust and Loan Company, overdue, 8 per cent. interest.....	14,00
Debentures issued in 1865, bearing 6 per cent interest.....	16,00
Against which there is a county debenture in the sinking fund for $1,600 with interest for two years, leaving a balance in round numbers that will be due in less than five years of.....	14,00
Balance due the Receiver General bearing 5 per cent. interest, and which will be paid off in about eight years by the yearly payment of $1,600.....	9,00
Debentures issued last year bearing 7 per cent. interest, and due in twenty years.....	12,00
Making the total of.....	$54,0

$19,000 being now over due, and $14,000 falling due in less than five years.

THE MONTREAL TELEGRAPH COMPANY has recently made some sweeping reductions in the Tariff of Charges, applicable throughout the whole of the Dominion. In many instances the reduction is equal to making the new Tariff less than one half the old rate on lengthy messages. The press rate from St. John to Montreal or Ottawa is now but half what it was a fortnight ago, and we presume that Halifax and other Maritime Cities share in these advantages. The Company, we believe, will be gainers by this liberal policy, and the important public result—the speedy and cheap exchange of commercial, political and other news between the principal cities of the Dominion—will be brought about through the Company's instrumentality.

LAND GRANTS.

Congress up to March last, had granted in aid to various Western and Southern States over 000,000 acres lands for railroad purposes. It has given beside over 17,000,000 acres to canals and similar improvements. The Pacific Railroad and branches have received 124,000,000 acres, and to this is added the even numbered sections along those routes, which the Secretary of the Interior decided to be closed for settlement, it will appear that nearly one-third of the entire public domain has been made over to the control of railroad companies. "The quantity of lands conveyed by these grants," says the Commissioner of the General Land Office, "is of empire extent, exceeding in the aggregate, by more than 5,000,000 of acres the entire areas of the six New England States added to the surface of New York, New Jersey, Pensylvania, Ohio, Delaware, Maryland and Virginia." He says the grants to the Pacific railroad lines alone "are within about a fourth of being twice the united area of England, Scotland, Wales, Ireland, Guernsey, Jersey, the Isle of Man, and the Islands of the British seas, and within a tenth of being equal to the French empire proper."

In 1860 and 1861 the Government sold 234,000 acres of Delaware lands to the Leavenworth, Pawnee and Western road. In 1866 it sold 92,000 acres of Delaware lands to the Missouri river road, and in 1859 it disposed of 278,200 acres to 36 purchasers. Among them were the following: The Hon. Hugh McCulloch, 7,014 acres; Hon. Fuller and McDonald, 39,058 acres; John Manus, 142,915 acres; Robert R. Stevens, 5,

cres. In 1865, Senator Pomeroy being then Pre-i lent and one of the principal owners of the At-hison and Pike's Peat Railroad Company, a treaty vas carried through the Senate by which this road ourchased 123,832 acres of as rich lands as there re in Kansas. The above facts and figures were brought to the notice of the House by Mr. Julian, Chairman of the Committee of Public Lands, in March last, and Mr. Clarke, of Kansas, has given direct testimony upon most of the points involved n the attempted Osage and the completed Che-okee swindles. These things are in the past.—But hundreds of similar schemes, quite as extensive, are now before Congress, and the lobby engaged in pushing them is larger and more influential than ever before.—*U. S. Railway and Mining Journal.*

THURSDAY, JANUARY 28, 1869.

ONTARIO PEAT COMPANY.

The production of peat fuel is likely to be-me an important branch of industry in Can-la. Wood has become se scarce that the sidents in our cities find it a very promi-nt item in their household expenses, and he farmers in many parts of the country are gginning to feel the effects of that wholesale struction of the forest which has goneon for ars, without a thought being bestowed on e future. The price of cordwood has gone so high that dealers have found it profit-le to bring supplies to Toronto from the ate of Michigan. The coal dealers have tle pity for the community, and by forming rings" and "corners," have run up the ice of coal to a very high figure.

The scarcity of wood and the high price of al have, we are glad to say, turned public tention to the production of peat, and stim-ated enterprises such as that taken in hand the Ontario Peat Company. The pros-ctus of this Company, which will be found another page, is worthy of a careful perusal. he ton of peat has been found by experi-ent to be equal to about one and one-third rds of hard wood, and if the peat can be laid down on the banks of the Welland Canal at $1 to $1.25 a ton, we have no doubt that we shall soon be freed from the clutches of a monopoly in fuel. The Company has 1400 acres, part of the well known Cranberry Marsh, in Welland, capable of producing, according to the estimate of the engineers, over 3,000,000 tons of peat. We are assured that some of the Welland peat which sold in Hamilton at $4 a ton, has given the greatest satisfaction. With such a margin for profit, as this affords, the stock of the Company should be readily floated, and, with judicious management, could not fail to prove a paying investment.

PROTECTION AND UNEQUAL TAXATION.

According to Mr. Commissioner Well's report, the price of groceries and provisions in the United States, in 1867, as compared with 1860–61, is 88 per cent; of domestic dry goods, 86½ per cent; of fuel, 57 per cent; of house rent, 65 per cent; and in the large cities the latter has increased from 90 to 100 per cent. In the first half of 1868, the average increase of all the elements which constitute the food, clothing, and shelter of a family, has been 79 per cent as compared with 1860–61. The rise of wages for 1867 has been only 50 per cent for unskilled mechanical labour. From a comparison of the expenses of labouring men in the manufacturing establishments, it appears that in 1860–61 the weekly wages were $6.04, and the expenditures $5.52, leaving a saving of 62 cents a week; in 1867–68 the wages were $9.54, and the expenses for the same articles, $9.54, showing the unskilled workman, this year, to be $27 worse off than before. If flour be taken as a standard, the average increase of price from 1860 to 1868 is 90 per cent, while the average increase of wages is 58 per cent; so that in this item the workman is worse off by at least 20 per cent than he was before the war.

The person whose annual income and expenditure before the war were $1,000—say the country clergyman, or city clerk, or teacher—finds now that his expenses for precisely the same objects are $1,790. If his salary had been raised to the gold standard—say $1,500—he is still some $400 behind annually, or so much poorer. Even in gold, his income is worth $440 less annually. Each individual with fixed income has 79 per cent less to spend. His dollar is only worth a fraction of what it was. If he has the same income in gold, his dollar will now buy 44 per cent less. If he is a labourer, earning before the war ten dollars a week in gold, and consuming it all, he now receives but $15.80, while his necessary expenses are 90 per cent greater.

The effect of the protective tariff is seen in the unnatural growth of manufactories of various kinds, and the reduced production of staples, such as breadstuffs and farm products. The capitalist is growing richer, and the labouring classes are becoming poorer. Yet with all the nursing which has been lavished on the manufacturing interests, Mr. Wells confesses that "the United States finds itself in the anomalous position of a great nation, favored in many respects as no other nation upon which the sun shines, unable to exchange its products on terms of equality with the products of any other country; the marked exception being always its product or supplies of the precious metals." This condition of things is attributed to an irredeemable paper currency, unequal and heavy taxation, and a limited supply of skilled labour in some departments of industry.

THE GOVERNMENT AND THE TELEGRAPH.

Mr. Washburn, a member of the American Congress, is advocating the passage of a bill to annex the telegraphs of the United States to the Post Office Department. The tariff provided is one cent per word for telegrams, with an additional charge of three cents for postage and two cents for delivery, with a reduction to the press of fifty per cent. According to the New York *Times*, this rate would increase the average cost of news to the press of the United States more than three hundred per cent, and would compel the newspapers to pay an extra tax of a million dollars a year for the privileges they now enjoy. It is a very suggestive fact that, in one year, 14,725,181 telegrams furnished to the press by the Western Union Telegraph Company cost only $521,509, which quantity of news is greater than the entire telegraphic correspondence of all continental Europe, for which the paternal governments therein charge and receive $11,597,632 a year. The following table will show the contrast between the European system of State control, and the American system of private management:—

Statement showing the average cost of telegrams in Continental Europe and the average cost of press telegrams in the United States, with total amount o each per annum:

Total number of messages transmitted in Continental Europe for the year 1866.... 12,902,538	Total number of messages furnished to the newspapers of the U. States for 1866..... 14,725,181
Gross receipts for the above. $11,597,632 71	Gross receipts for the above..... $521,509
Average cost of telegrams in Continental Europe.....81 cents.	Average cost of press telegrams in the U. States 3½ cents.

The statistics of telegraphs constructed and operated under governmental control, as compared with those under private management, are as follows:—

Under Government Control.

Totals.....6,659	18,741,360		

The New York journal to which we have referred puts the case in a striking light when it thus compares the systems :—"In Continental Europe, where the telegraphs were built and are operated by Government, there are but 4,347 offices for a population of over 250,000,000; while in Great Britain, the United States, and the Dominion of Canada, where telegraphy has been left to private enterprise and has been untrammeled by governmental interference, by monopoly or restriction, there are 6,559 offices to a population of 64,000,000. While the number of telegrams transmitted in Continental Europe was only 12,485,311 in one year, there were sent in the three countries where telegraphy is free from governmental intermeddling and repression, 18,741,360. While the average cost of telegrams in Europe was 81½ cents, in the three countries where the people were let alone and suffered to manage the business themselves, it averaged only 51 cents."

Communications.

CLASSIFICATION OF VESSELS.

To the Editor of the Monetary Times.

Toronto, 27th Jany., 1869.

SIR,—As the season is again at hand when the Inspectors of the various local Insurance Companies, composing our Canadian Association of Lake Underwritsrs, will depart on their annual tour o inspection, will you permit me, through your columns, to offer one or two remarks.

During the past season of navigation complaints were made by sundry shippers, and vessel owners, concerning what they termed the defective inspection of vessels; and no doubt their complaints were, in several cases, not without sufficient ground. It was alleged that their vessels, with their outfit, were duly overhauled in the Spring, and classed as standard, by which classification they were allowed to carry grain cargoes on any, and all, our inland lake waters between Chicago and Quebec. In several cases, on the approach of the equinoctial gales and the cold and boisterous weather of the fall season, they were informed, on applying for insurance, that grain cargoes could not be conveyed by such and such vessels as their sails and standing and running rigging were not in a condition to encounter the gales prevalent at that season of the year.

If a vessel at the commencement of the season classes standard, she ought, it is contended, to retain that classification until the close, unless she has, in the interval, sustained damage which has not been made good. If the vessel, or any portion of her outfit is, on inspection, found to be in a defective condition, let those defects be pointed out to the owner, with injunctions to have them remedied before the approach of heavy weather, under penalty of having the class of his vessel lowered. But to allow her to run through the whole of the fine season, and then in the height of the carrying trade, when, as is often the case, vessels are scarce and their owners, perhaps, anxious to make up for a bad Summer's business, to start these objections is, I think it will be conceded, a manifest injustice to all parties.

Truly yours,

INSURANCE.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending January 8, 1869.

Passengers	$23,713 68
Freight and live stock.....	48,598 79

STEEL RAILS.—Advices from Essen state that the low rates current for Bessemer steel rails in that district have excited the most bitter complaints on the part of Prussian industrials. Thus, at an adjudication for the Lower Silesian (Marxiseh and Berlin) Railway, Herr Krupp, of Essen, undertook to supply Bessemer cast steel rails at £15 6s. 6d. per ton. The manufacture of steel is attracting more and more attention among Prussian industrials. Thus, it is announced that the New Scotland Company is about to occupy itself with the production of cast steel. This society has for some time produced with success puddled steel rails.

THE CENTRAL PACIFIC RAILROAD.—Trains on the Central Pacific Railroad are running on schedule time to Carlin, in the northeast corner of Nevada, 600 miles distant. Track-layers are at Humboldt Canon, 25 miles further east.—No interruption has occurred from snow so far, the 22 miles of snow-sheds at the summit of the Sierras working satisfactorily. The commercial business of the Central for December exceeded $340,000. Out at the end of the Central Pacific Railroad track they have a complete blacksmith shop permanently fixed on a wagon. It is moved along about three times a day to keep pace with the workmen. One team is detailed regularly to move the blacksmith shop.

RAILWAY ACCOMMODATION AT GUELPH.—The Guelph Town Council have adopted a report of their railway committee, stating that they had sent a deputation to wait on Mr. Swinyard, Manager of the G. W. Railway, to ascertain from him on what terms he could be induced to move the Western Station to a central part of the town; that they found him prepared to do so provided the right of way was secured the road on the north side of the G. T. R. to the Market Square, and ground for the Station granted somewhere in the vicinity of the Market Square. They also recommend a communication to be sent to Mr. Brydges for the purpose of ascertaining what action he will take in the matter, and that immediate action be taken to complete an arrangement between the town and the two companies for the centralization of the Stations.

Law Report.

INSURANCE—CONDITION TERMINATING RISK.—A condition endorsed on an insurance policy provided that if, for any cause the company should so elect, it should be optional with them to terminate the insurance, upon notice given to the insured or his representatives of their intention so to do, in which case the company should refund a ratable proportion of the premium. It was contended that the notice contemplated by the condition was a notice giving to the plaintiff a reasonable time to afford him an opportunity of effecting a new insurance previous to the termination of the defendant's policy. The Court considered that by acceding to that interpretation they would be adding a term to the condition somewhat inconsistent with its object and intention—viz., the right to put an end to the risk at any time.

Held—That the notice should precede the termination of the insurance, but that they might be contemporaneous, and that the company could terminate the risk by giving notice that they did so, and refunding the unearned premium.—*Case* v. *Lancashire Ins. Co.*, 27 *Q. B.*, 453.

INSURANCE—ARSON—LEAVING PREMISES UNOCCUPIED.—In an action on a fire policy, defendants gave such evidence to show that the house had been burned by one K——, by the plaintiff's procurement, as would well have warranted a finding for defendants. K——, however had been indicted for the arson, and acquitted. The jury having found for the plaintiff, the Court refused to interfere.

The policy provided that in case of any alteration or addition, &c., or change in the nature of the occupation, or in any other manner whatsoever, by which the degree of risk was increased and a consequent additional premium would be required, the insurance would be void in default of notice and allowance thereof. Defendant alleged, as a breach of this condition, that the premises which, when insured, were occupied by the plaintiff's tenant, became vacant and unoccupied without defendants' knowledge or consent whereby the risk was increased and an additional premium would have been required; and that the plaintiff did not give notice of this change, nor was it allowed by defendants.

Held—That the plea was bad, for the mere ceasing to occupy was not within the condition. In delivering judgment, the Chief Justice said—We are not prepared to hold that the clause in the policy is to be so construed that if the assured leaves home for a week, locking up his house, and a fire takes place during that time, his policy

threby avoided. A "change in the nature of the occupation" does not, we think, point at a mere temporary cessor of the occupation, but rather to an application of the premises insured to a purpose different from that described in the application. If the underwriters desire to guard themselves against loss on unoccupied buildings, or to make continued residence a condition precedent to the right of recovery, in the case of a building described as a dwelling-house occupied by a tenant, we think they must use express language to meet the case.

This Court, in Hobson *v.* The Western District Mutual Fire Insurance Company (6 U. C. R 536), under a plea setting out a provision that where there was a change of occupation the policy should be approved by the company, and averring that the plaintiff, though the occupier when the insurance was effected, was not so at the time of the fire, but that A. B. was, and that fact was not communicated to defendants, held "that a mere change of occupant, without other alteration in the manner or purpose of occupation," was not within the provision.

Mr. Boulton urged that, at all events, this objection would lie under the words "or in any other manner whatsoever." It seems to us, however, that as the alleged avoidance of the policy is stated to be the ceasing of the fact of occupation, then if such ceasing do not properly fall within the legal meaning of the condition, the general words cannot help them.

In any event, we think the whole condition rests in the words "by which the degree of risk is increased, and a consequent additional premium would be required," and that it must be left to the jury to say if the risk be increased, otherwise we would have to construe the clause as a warranty that no change should take place whether the risk be thereby increased or not; or, in the amusing illustration of the late Chief Baron Pollock, if premises in which fireworks were made and there was a provison that no alteration should be made without notice, but afterwards the premises were converted into an ice-house, would that vitiate the policy?—*Stokes* v. *Cox*, (1 H. & N. 320).

In the late decision of the Common Pleas in Tod *v.* Liverpool and London Insurance Company (1 H. & N. 533), on a condition almost identical in its language with this, shows that "alterations generally are not prohibited, but only such as did increase the risk, and as no increase of risk was found, the defendants must fail on that part of their rule." The facts there were far stronger against the plaintiff than here, as an elevator was put in without notice after effecting the policy, and the underwriter's agent who effected the insurance swore that a higher rate of insurance would be required for a building in which such an elevator might be placed, according to the company's tariff.

We refer to Stoke *v.* Cox, in error, (1 H. & N. 533), and to Baxendale *v.* Harvey (4 H. & N. 455), which show the strictness with which these conditions are construed, and that the question of increase of risk is to be submitted to the jury. In the latter case Martin B. says, "Stokes *v.* Cox is an authority that, if the insurers wish to make it a condition precedent to the validity of the policy that there shall be no alteration in the circumstances, whether the risk is increased or not, they must do so in distinct terms."—*Gould* v. *British Ass. Co.*, 27 *Q.B.*, 480.

Commercial.

Toronto Market.

DRY GOODS.—Business has been very quiet since the opening of the year. This is, of course, general at this season, but the absence of snow, and the consequent delay in getting grain and other farm produce to market, has restricted the sales of country merchants, and rather disappointed the anticipations of those in the trade. This, however, may only be temporary, as the present mild, dry weather connot be expected to last. In fact, during the last few days, snow has fallen in some localities, and business is becoming more active. The total imports of Dry Goods at the port of New York for the past year amounted to $80,905,834, against $88,582,411 for the previous year, and $126,222,858 for 1866—a decrease of above $46,000,000 on 1866, and $8,000,000 on the imports of 1867. The decrease was principally on woolen goods, while on silk there was an increase.

GRAIN.—*Wheat*—Receipts by cars 17,000 bush. and 7,400 bush. last week. The market is very quiet; receipts at the different railway stations have been light owing to the want of sleighing. There is a small demand for Spring at $1.03, and sales of cars occurred during the week at $1.03 to $1.04. There is a slow demand for prime samples of Fall; common and inferior dull of sale; the very finest samples of white are held for an advance on our quotations. *Barley*—Receipts 1,950 bush. and 1,300 bush. last week; the brewers are taking all that offers at $1.28 to $1.30 on the track, and $1.30 to $1.32 delivered. *Peas*—Receipts continue very small, and the market is nominal as quoted. *Oats*—Receipts 6,800 bush. and 6,700 last week. The market is quiet and steady at 52c. to 53c., with some business doing at these prices. *Rye*—Nominal. *Seeds*—There is a small speculative demand for Timothy at $2 to $2.50, and $2.75 for No. 1; Clover, $6.25 to $6.50; flax, $1.70 to $2.

FLOUR.—Receipts 2,500 bbls., and 3,350 bbls. last week. The market is dull at quotations; demand light and little doing. Two or three lots sold at $4.55, which is about the value of good brands of No. 1 superfine. A lot of Spring Wheat extra sold at $4.65. Extra, nominal as quoted. Nothing doing in other grades.

PROVISIONS.—*Dressed Hogs*—The market is active at quotations; car loads of heavy averaging 240 lbs. sell at $9.50 to $9.80. *Pork*—Mess firm and higher as quoted; Prime Mess held at $22, and English prime mess at $20. *Bacon*—Sales Canadian cut occurred at 9¾c. to 9¼c.; Cumberland cut 10¼c. to 10¾c. *Butter*—Quiet and unchanged. *Eggs*—Dull at 16c.

FREIGHTS.—Rates by Grand Trunk Railway:—Flour to all stations from Belleville to Lynn, inclusive, 35c., grain per 100 lbs. 18c.; flour to Brockville and Cornwall, inclusive, 43c. grain 22c. flour to Montreal 50c. grain 25c.; flour to all stations between Island Pond and Portland, inclusive, 85c. grain 43c.; flour to Boston $1.15 U.S. currency; flour to Halifax $1.05, grain 00c; flour to St. John 95c. Boxed Meats to Liverpool per gross ton 82s. 6d.; lard or butter in tinnets 87s. 6d.; Pork 11s. per tierce; flour 5s. 6d. per barrel; grain 12s. per 480 pounds. Rates by Great Western Railway—Flour, Toronto to Suspension Bridge 25c. gold; thence to New York, 76c. U.S. currency per bbl.; to Boston 86c.—Rates from Toronto to Liverpool, London and Glasgow are—Beef, Bacon, Pork, Hams, Lard and Tallow, in lots of one car load and upwards, $1.52. gold, per 100 lbs. Grain, in bags of 5 car loads and upwards, 96c., do. Flour, $1.62 per bbl. do.

Produce in New York.

The following were the stocks in store in New-York on the dates mentioned:

	Jan. 18. 1869.	Jan. 11. 1869.	Jan. 20. 1868.
Wheat.....bu	3,152,461	3,524,172	1,548,361

Cornmeal, bbls.....	300	300	100

St. John Market.

BREADSTUFFS—Jan. 12.—Dullness continues in the flour trade, and prices are a trifle lower. Demand is light, and arrivals keep the stock without diminution. We quote superfine at $5.90, and choice brands 10 to 20c. higher. The competition to effect sales causes much irregularity in prices, and it is difficult for our quotations to show the exact state of the market. Dealers say they are not getting the cost of their goods. It is pretty certain that the whole trade in breadstuffs is in an unsatisfactory condition, nearly all markets being overstocked, and flour selling at a loss. Cornmeal $4.50.

The following is a statement of the quantity of flour and cornmeal imported into St. John in the year 1868, during which period there were also imported six cargoes of corn, containing 43,347 bushels:

CANADIAN FLOUR VIA PORTLAND.

American flour.....		38,050
Total flour (barrels).....		215,701
Cornmeal (including 3,315 bags reduced to barrels).....		32,275

Halifax Market.

BREADSTUFFS.—Jan. 19.—We note no quotable change during the past week, the absence of any speculative feeling continues, buyers still holding off with a view to lower prices.

The stocks at Pictou and the vicinity are still large, thus preventing any outlet in that direction, and greatly restricting demand for home consumption. Our receipts are fully equal to demand. We quote:—

White Wheat extra (fall) $7 25 to $7 50. Fancy $6 60 to $6 75. Bakers' Strong, $6 40 to $6 50. Supers $6 25. No. 2 $5 to $5 50. Midlings $4 75 to $5. Pollard's $4 25 to $4 50. Rye $5 to $5 25. Oatmeal $7 75. Cornmeal, K. D., $4 50. F. G. $4 25. White Beans $3 25 to $3 50.

WEST INDIA PRODUCE.—Sugar and Molasses continue unchanged. Stock of latter, principally Cienfuegos, and not suitable for retailing. A mixed lot of Trinidad offering at 30c. Dealers anticipate early arrival of new crop, till then no transactions of any moment are likely to be made. Rum is decidedly lower, several cargoes are hourly expected. We quote: Sugar, V. P. 9 c. Porto Rico 8¼ to 8½c. Cuba 7¼ to 8c. Molasses Cienfuegos 35 to 36c. Trinidad 30 to 33c Rum—Demerara—(in bond) at 60c. Coffee— amai a—13 to 15c. St. Domingo 10 to 12c.

Fish and Oil.—Considerable activity prevails in these markets, several round lots having changed hands at full rates. Cod Oil has been taken at 58c. cask. Stock light.

Exchange—Bank Drafts on London, 60 days, 12½ per c. Montreal, sight, 3¼ per c. New York Gold 3 per c. Currency 23 per c. disct. St. John, N. B. 3 per c.

English Barley Market.

There is no doubt that high prices have had the effect of bringing supplies more rapidly forward than usual, and hence it can only be concluded that as our crop is a small one, a rapid and early exhaustion of it will take place. Unless, therefore, it can be proved that the deficiency of the home growth will be compensated by an augmented yield abroad, there can be no prospect of any abatement in price. Hot, dry weather seems to have been as prejudicial to the crop of barley abroad as it has been in this country. France, however, forms an exception, for from that country we have received liberal supplies of excellent malting produce. Had it not been for the importations of barley from France, the prices of barley must have risen to a point which would have necessitated a decided advance in the price of beer. The crop in Germany seems to have turned out poorly, for as yet we have received very moderate supplies. But the fact is, that notwithstanding the high quotation current in this market, there is no profit on shipments from the Baltic ports, and consequently sufficient evidence is given of the shortness of the crop. From the United States there is no prospect of obtaining supplies.—*Morgan's Trade Journal.*

The Sugar Crop.

The New-York *Shipping & Commercial List*, in presenting its annual statement of the Sugar trade of the United States for 1868, says:

"The figures exhibit briefly the trade of the country in this food article. It will be seen that the receipts of Foreign into the United States, exclusive of the States and Territories on the Pacific, for the year ending Dec. 31, 1868, were 470,975, tons, against receipts in 1867 of 355,801 tons; in 1866 of 493,497 tons; in 1865, 362,243 tons; in 1864. 214,099 tons; in 1863, 243,138 tons; in 1862, 247,015 tons; in 1861, 242,908 tons; in 1860, 341,532 tons, while the consumption of Foreign in 1868, was 446,433 tons, against a consumption in 1867 of 37,068 tons; in 1866, 383,178 tons; in 1865, 34,809 tons; in 1864, 192,660 tons; in 1863, 231,308 tons; in 1862, 241,411 tons; in 1861, 241,420 tons, and in 1860, 296,950 tons, and that the total consumption of Foreign and Domestic Cane Sugar in 1868 may be placed at 469,553 tons, against a total consumption in 1867 of 400,268 tons; in 1866, 391,678 tons; in 1865, 350,869 tons; in 1864, 120,660 tons; in 1863, 284,368 tons; in 1862, 432,411 tons; in 1861, 363,819 tons, and in 1860, 416,281 tons, being an increase in the consumption of Foreign in 1868, as compared with that of 1867, of 68,465 tons, or over 18 ₱ cent., and an increase in consumption of Foreign and Domestic of 68,965 tons, or about 17¼ ₱ cent.

The manufacture of Sugar from Molasses continues to be prosecuted with great vigour, the sale of Molasses for this purpose during the past year, and the yield of Sugar, being larger than we have ever before recorded; owing, however, to the inferior quality of the crop of last year's Molasses, the Sugar product has not been as great ₱ hhd. as in former years by at least 10 ₱ cent., so that while our estimates point to a consumption in the United States of nearly one-third more Molasses—say about 160,000 hhds., against a consumption of 120,000 hhds. in 1867, the Sugar produced therefrom has only been, say 72,000,000 pounds, or in round numbers 32,000 tons, against a yield of 26,700 tons in 1867. The Sugar also was not of as good a quality as usual, and finding a less ready sale during much of the year, the stock left over at its close is larger than is generally the case at the end of the year.

The crop of Louisana, now about made, is estimated at 100,000 hhds. The season has been usually favourable, so much so, that at one time strong hopes were entertained that the yield would reach 125,000 hhds., but the weather has been recently less propitious, and the estimates have been reduced to the first mentioned figures.

The planting interest of that State is much more hopeful, the crop has steadily advanced from a little over 10,000 hhds. in 1863-4, to about 100,000 hhds. the present rolling, with much cane reserved for next season's planting, and already, with a favourable year, a crop of 250,000 hhds. for the coming season is talked of as not an improbable event.

Advices from the principal West India points, indicate a lull supply. Cuba last year turned out a crop nearly, or quite, one-fourth larger than was ever before made upon the island, and, as it is from that quarter we receive the bulk of our supplies, the greatest interest attaches to the events now transpiring there. The insurrection has already interfered to some extent with grinding operations on the south side of the island, but it remains to be developed how far these injurious effects may be extended, and consequently our markets generally are in a waiting attitude. The prospect, until recently, was, that the yield the present season would fully equal, if it did not exceed that of last year, and the course of prices will depend very much upon the ability of the Spanish Government to suppress speedily, or prevent the spreading of, what has become rather a formidable rebellion.

Great difficulty surrounds the collection of statistics relative to the crop of maple sugar, much the larger part being consumed upon the farm; with our rather imperfect data, we make the last years' crop about 23,000 tons.

These estimates for the consumption of raw in our States and Territories on the Pacific, the past year, are in the neighborhood of 18,000 or 19,000 tons; a very considerable increase in these figures is looked for the present year, as, owing to the present unexpected short supplies and low prices for the refined article, the refineries of San Francisco were idle during a portion of the past year; besides which, one or more of the establishments have recently considerably enlarged their works, with the intention of prosecuting the work with renewed.

The cultivation of the beet root for sugar is yet entirely in its infacy, and the quantity of sugar made from it here, as well as the results of the sorgo culture, as far as sugar-making is concerned, are so inconsiderable that we make none other than this passing note of them.

Having thus reviewed the several points of interest, the consumption of the various descriptions throughout the country may be stated as follows:

	Tons.
Cane Sugar consumed in the United States on the Atlantic	469,533
In the States and Territories on the Pacific	18,500
On Sugar made from Molasses	32,000
On Maple Sugar	23,000
Total	543,033
Against a total consumption of all kinds in 1867, of	467,268
Increase	75,765

Or about 16¼ per cent.

The production of Sugar throughout the world, including the Beet Sugar of Europe, and the Palm and Date Sugar of the Indies, for the year 1867, is estimated at 2,299,600 tons, of which Cuba produced nearly one-third; and the consumption for the same year, 2,007,700: of this Great Britain and her colonies consumed about 630,000 tons, and the United States 467,309 tons: the two nationalities consuming nearly one-third of the world's supply.

Exports of Petroleum from the United States from January 1 to January 9.

Wheat in California.

An exchange says: "California produced last year, over all requirements for domestic consumption, 8,000,000 centals of wheat for export, nearly 3,000,000 more than in the previous year. She has exported to Great Britain 1,600,000 centals to New York and other Atlantic ports, 1,000,000 and to other countries, 4,000,000, leaving a surplus of 4,400,000 centals on hand. It would require, it is said, 220 ships of 1,000 each, to carry away the remaining surplus of California wheat alone. The *Commercial Herald*, from which we condense the foregoing, adds that the end of 186 has been nearly reached, and that but six months remain before the next harvest year will be upon us, with a larger breadth of land sown to wheat than has ever been cultivated in California with that grain. Although the rainy season has been unusually backward, indications are greatly in favor of our chances for an average amount of rain. There is no ground upon which to predict a dry or unusual winter, and the probability is very great that our next harvest year will give us a surplus of 10,000,000 centals for export. It will require 500 ships of 1,000 tons each to carry away the prospective export crop of next year. There are now thousands of acres sown to wheat that is well up, and is in every way thrifty and promising.

American vs. Canadian Flour.

Alex. S. Macrae's Liverpool Weekly Produce Statement says: Why should American sell as a rule at much less money than Canadian? Simply because the former rarely finds its way direct from the miller to the British consumer—is perhaps months knocking about in the stores of United States seaports, and consequently, cannot compare in excellency of condition with the Canadian. The very freshness of the barrel seems "finish" to the flour, and the Canadian brand with legible care and special significance as to address, so that wherever that quality finds favor, that miller is advertised by it to his very home. Thus particular brands get called for, and every miller possesses within himself the means of founding a European reputation, of more value than even an American one, with the power of pitting the one against the other. Western brands ought not to be selling at 24s. to 26s. 6d. (7½ to 8 dollars) while Canadian commands 27s. to 29s. (8¼ to 9 dollars) per barrel, but such is the fact, the latter saving besides five to ten per cent in expenses, by a direct alliance with British consumers.

BARLEY.

One of the most extraordinary features of the season is the rush of barley from Great Britain to the United States! It appears that American distillers, more especially those of Chicago, have suddenly discovered the superiority of our grown and we are shipping, from the 1st of December to the 23d some 120,000 bushels, against not a single bushel last year! If any evidence was wanted of the constant necessity of Americans and England to try and reciprocate produce, it is here most fully afforded. The value of British barley for malting purposes is 6s. to 6s. 6d. per bushel of 60 lbs.

EDWARDSBURGH STARCH COMPANY.—At the nual meeting of the shareholders of this Com-ny, held on the 19th inst., the following gentle-n were elected Directors for the present year:—Shanly, Esq., M.P., Peter Redpath, John Mc-nnan, W. T. Benson, Warden King, John Fair-irn, Henry J. Tiffin, Esqrs. And at a meeting the Directors, held on the 20th instant, Mr. anly was re-elected President, and Mr. Redpath ce-President.

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY, | GUY. R. PHELPS, PRESIDENT,
EDWIN W. BRYANT, ACTUARY, | ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS.

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $1 0 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25.000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

Canada Life Assurance Company.

CAPITAL AND CASH ASSE

OVER $2,000,000.

SUMS ASSURED

$5,000,000.

A COMPARISON of the rates of this Company with others cannot fail to demonstrate the advantage of the low premiums, which, by the higher returns from investments, it is enabled to offer.

IF PREFERRED, ASSURERS NEED ONLY

PAY ONE-HALF OF EACH YEAR'S PREMIUM IN CASH,

during the whole term of policies on the 10 payment plan, or for seven years on the whole life plan.

For the unpaid portion of premiums,

"NOTES" ARE NOT REQUIRED BY THIS COMPANY,

so that assurers are not liable to be called upon for payment of these, nor for assessments upon them, as in the case of Mutual Companies.

Every facility and advantage which can be afforded is offered by this Company.

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY

Capital and Invested Funds.....£750,000 *St*

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling

THE important and peculiar feature originally introduced by this Company, in applying the per Bonuses, so as to make Policies payable during life, with any higher rate of premiums being charged, has the success of the BRITON MEDICAL AND GENERAL almost unparalleled in the History of Life Assurance. *Policies on the Profit Scale become payable during the l of the Assured, thus rendering a Policy of Assur means of subsistence in old age, as well as a protectio family*, and a more valuable security to creditors event of early death; and effectually meeting the urged objection, that persons do not themselves re benefit of their own prudence and forethought.

No extra charge made to members of Volunteer for services within the British Provinces.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

S Institution differs from other Life Offices, in that the BONUSES FROM PROFITS re applied on a special system for the Policy-holder's personal benefit and enjoyed during his own lifetime, with the option of large bonus additions to the sum ed. The Policy-holder thus obtains a large reduction of present outlay, or a pension for old age of a most important amount in one cash payment, or a life anuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

PUBLISHED AT THE OFFICE OF THE MONETARY TIMES, No. 60 CHURCH STREET.
PRINTED AT THE DAILY TELEGRAPH PRINTING HOUSE, BAY STREET, CORNER OF KING.

THE CANADIAN
MONETARY TIMES AND INSURANCE CHRONICLE.

THE Publishers have pleasure in announcing that the success of this JOURNAL has been such as to stimulate their efforts to render it still more valuable to the classes directly and indirectly interested in the subjects with which it deals. As the only Journal in the ominion which gives particular attention to INSURANCE, it has enlisted the hearty support of Insurance Companies; and while, on ie one hand, it contends for the rights of such Companies, it equally recognizes the rights of the public.

The subject of BANKING has become of such importance, as well by reason of past legislation as by reason of anticipated changes in ie law respecting circulation, that it is the duty and interest of our business men to make themselves acquainted with the principles 1 which sound Banking rests, and to prevent any action on the part of the Legislature likely to injure the community by lessening ie usefulness of our banks. The discussion of this subject in the columns of this JOURNAL has called forth expressions of satisfaction om our most astute financiers, and has done much to give us the position we now occupy in the estimation of the public.

As MINING is in its infancy in this country, a journal devoted solely to the subject could not hope to thrive; but by giving full iformation regarding Mining operations, and by the employment of reliable correspondents, we have done good service to an important iterest, and secured recognition from a class which, otherwise, could not have been reached.

Our purely COMMERCIAL DEPARTMENT has not been neglected, and each week's summary, while concise and pithy, has answered the ime ends as a more diffuse elaboration could do, and conveyed to country dealers a complete synopsis of the changes in the Toronto and Iontreal Markets.

This combination of interests which the circumstances of the country render necessary, has been of the greatest advantage to each iterest by diffusing information among all classes; but, in order to do justice to all, we have been compelled to employ a large staff of riters, and to expend a considerable amount in securing trustworthy correspondents.

While we are thankful to those who have encouraged us thus far, we are anxious to extend still further the usefulness of this Journal, id we call on all who consider that the enterprise is worthy of support, to lend us their assistance in making the MONETARY TIMES a ational organ.

On our part we promise impartiality, efficiency, and the best efforts of the ablest writers that can be secured in the Dominion. On ie part of our clients, we expect a cordial support and active exertion to widen our sphere of usefulness. In helping us, they help iemselves.

Every Merchant, Banker, Capitalist, Insurance Agent, and Broker, can aid us, and we hope that we are not asking too much, in liciting their assistance.

We shall be happy to receive at any time articles on subjects within our jurisdiction, which, if used, will be liberally paid for.

Subscription Price.....$2 per Annum.

A reasonable discount will be made to Banks, Insurance Companies, &c., which subscribe for their Agencies.

SEND FOR A SPECIMEN COPY.

N.B.—Every subscriber to THE MONETARY TIMES will receive THE REAL ESTATE JOURNAL without further charge.

THE REAL ESTATE JOURNAL.

The objects of this Journal are as follows:—

(1.) To supply to those interested in real estate such information as is of special interest relating to sales or transfers of real pro- rty in the principal cities, and throughout Ontario, construction of public works, and building improvements of every kind, increase or crease of municipal expenditure, debt and taxation, and, in short, whatever tends to influence the real estate market.

(2.) Leading articles will be furnished by competent writers on questions relating to conveyancing, the rise and fall of property, land ants, emigration, and other subjects coming within the legitimate scope of the Journal.

(3.) Lists of lands and houses for sale in every city, town and village of the Province, will appear in its columns, giving buyers the st possible opportunities for selecting desirable properties of any class, and in any locality; and, at the same time, affording sellers a liable and certain medium for reaching intending purchasers.

(4.) By a circulation extending into every corner of Canada, the announcements of advertisers will be brought to the notice of an mense constituency of readers. A special feature in this connection is, that the Journal will be placed and kept on fyle at all the prin- pal hotels, reading rooms, and other public places in Ontario, and in Montreal. By these means it is confidently believed that every ss in the community will be reached.

THE REAL ESTATE JOURNAL is printed fortnightly, on good white paper, in quarto form, and is equal in size and appearance to anything the kind published on this continent.

Advertising, per line of nonpareil, each insertion, 5 cents. A small discount will be allowed on yearly contracts, for large spaces.

Address, "THE REAL ESTATE JOURNAL," Toronto, Ontario. Cheques should be made payable to J. M. TROUT, who will o issue all receipts for money.

OFFICE, No. 60 CHURCH STREET,
TORONTO, ONTARIO.

ONTARIO PEAT CO.

PROSPECTUS OF THE ONTARIO PEAT COMPANY

LIMITED LIABILITY. - - - - - - - - HEAD OFFICE—TORONTO.

To be Organized under the Act 27 and 28 Victoria, Chapter 23, and the Amendments thereto.

THE property of the company forms a portion of the well-known "Cranberry Marsh," in the Townships of Humberstone and Wainfleet, County Welland, and Province of Ontario, traversed by the Welland Canal, as well as by its "Feeder," which is also navigable; and is composed of t following lots, viz. :—

	Acres.
Humberstone—South halves of 28, 30, 32 and 33. Concession IV	400
Wainfleet—South halves of 6 and 7, Concession IV	200
" Whole of 10, Concession II, and the whole of 10 and 11, Concession III	600
" Parts of 8 and 9, Concessions IV. and V., about	200
Total	1400

A main ditch six feet deep has been made by the County through the whole of this Marsh for surface drainage, at an expenditure of $50,000; e this ditch runs along a portion of every one of the above lots, except two which abut upon the feeder of the Welland Canal.

The several lots above enumerated were the first chosen from the Marsh, having been selected for their great value as Peat Deposits. T remaining Peat lands have been obtained by the Anglo-American Peat Company, which has been operating most successfully during the past seas upon a lot adjoining one of the Company's lots. A most satisfactory report has been obtained from Frederick Holmes, Esq., the County Engineer- gentleman who has had large experience in these peat lands, having not only surveyed and laid off the Marsh into lots for the County, but has also b employed as superintendent in the ditching operations which have been undertaken and carried out through the whole extent of the Marsh. I estimate of the quantity of Peat contained in the Company's lands is placed at three millions of tons, at the very least; and this estimate is fully bo out by the eminent firm of Messrs. Macdougall and Skae, Civil Engineers, Toronto, who were specially despatched to make a personal examination the property, and whose report is subjoined.

Peat can be laid down on the banks of the canal at the cost of from $1 to $1.25 per ton, and can from thence be forwarded by water to market in directions, at small cost, and without transhipment; to say nothing of the facilities and advantages afforded by no less than five railways, one of whi the "Buffalo and Lake Huron," passes within twenty chains of the property. In addition to these advantages, the fact may be noticed, that ab thirty vessels pass through the canal every day during the season of navigation, the steamers requiring fuel for their own use, and the sailing vess seeking cargoes, and requiring ballast westward to Chicago and other points.

The demand for this fuel for private consumption will be very great when its superior qualities become more widely known. Already railways a steamers are beginning to use it instead of wood and coal, with the most satisfactory results, experience having proved that one ton of peat is equal about one and one-third cords of the best hard wood. With a view to the full and proper developement of this property, it is proposed to organize Company with a capital of $120,000, in 2,400 shares of $50 each; $50,000 of this sum to be retained by the Directors for working capital, the balance be applied to the purchase of the real estate. It is also proposed that 5 per cent shall be paid at the time of subscription, and the balance in calls 10 per cent at such times as the Directors may name, but not oftener than once in every three months, from 1st of January, 1869.

The affairs of the Company will be managed by a Board of five Directors, the first set to be provisional, and, as soon as the charter is obtained a the Company organized, the permanent Directors to be chosen by the Shareholders, and to be elected annually.

The principal office of the Company to be in the City of Toronto. The property has been conveyed to Peleg Howland, Esquire, who will hold same in trust until the Company is organized

PROVISIONAL DIRECTORS.

HENRY S. HOWLAND, Esquire, Toronto. JOHN FISKEN, Esquire, Toronto. LARRATT W. SMITH, Esquire, Toronto.
ALFRED TODD, Esquire, Ottawa. EDWARD A. C. PEW, Esquire, Welland.

Further information can be obtained at the office of C. J. Campbell, Esquire, Banker, 92 King Street East, Toronto, who will act as Provisio Treasurer, and will also receive subscriptions for Stock.

CHAMBERS, 17 TORONTO STREET, TORONTO, JANUARY 11, 1869.

To the Directors of the Ontario Peat Company,—

GENTLEMEN,—We have the honor to lay before you the following report, on the Peat Beds in the Great Cranberry Marsh, situated in the Cou of Welland. The swamp, or to call it by a more proper name, moor, for it is more like the moors of Scotland than the swamps of this country, intersected by a large drain, which at present carries off a considerable quantity of water; and from its juxta position, to the lots owned by your compa could be made available for drainage purposes. The moor rises gradually from its northern limit in concession 4, to its summit, at the south end concession 3, about four feet on two and a half miles, where it is about eight feet above the level of Lake Erie; while, on the north, from the end of moor to the Welland River, distant about a mile and a half, there is a fall of sixteen feet. Following the course of the water through the vari drains, the result arrived at is, that the moor is higher than the surrounding country, which is under cultivation.

The peat on this marsh, brought up by the boring rods, as well as that lying on the sides of the drains, thrown up when they were made, show good quality of a dark black color, in every lot. There is a layer of red peat in some of the lots of the Township of Humberstone; but generally peat was of the dark colour above mentioned. The surface of the marsh, or moor, has been burnt once or twice, so that there is not much moss or up growth, nor are there many trees alive; and on the lots owned by your company this is more marked. The lots are conveniently placed for worki and connections could be formed, at a small cost, to the several outlets that surround this tract of land; and the surface being regular, no difficu would be encountered in laying tramroads.

In making the borings for this report, the valuable assistance of the County Engineer, Mr. Frederick Holmes, was obtained, as he had superinten the making of the drains, and had laid out several of the lots some years ago, and since that time had been intimately acquainted with the moor. depths arrived at give an average of six to eight feet of peat over all the lots in the 3rd and 4th concessions, while in the lot of the 2nd concess of the Township of Wainfleet, the peat is very deep, averaging about 15 feet, and it is said to go even deeper. There are 200 acres in this lot.

The regularity of the upper surface of this large tract of land, both peat and arable, being combined with the result of the borings taken, tend t conclusion that the bottom of the peat bed must also be regular, as there are no hills or mounds of any size or consequence in the vicinity.

The Anglo-American Peat Fuel Company have been at work during last summer on a portion of this marsh, opposite to some of the lots owned your Company. They find the loss, by weight and shrinkage to be 75 per cent.; or to make one ton of peat fuel, four tons of peat are required. T is less than that of a similar project in the Lower Province, where the shrinkage is 85 per cent.

From the data and experience of the Anglo-American Company, taking the loss by weight and shrinkage at 75 per cent., with an average of fi six to eight feet over all the lots, but that in the 5th Concession of Wainfleet, which is taken at sixteen feet, we find the property of your Compa situated in the marsh, to be capable of producing over 3,000,000 tons of fuel.

A fuller report, by us, lies in the hands of Mr. C. J. Campbell, Banker, King Street, Toronto, to which also we beg to call your attention.

We have the honour to be, gentlemen,
Your obedient servants,

MACDOUGALL & SKAE.

Meetings.

WESTERN CANADA PERMANENT BUILDING AND SAVINGS SOCIETY.

The annual meeting of this Society was held in their offices, Church street, Toronto, on the 3rd February, the President, Hon. G. W. Allan, in the chair.

The following were among the gentlemen present:—Hon. G. W. Allan, Hon. D. L. Macpherson, C. S. Gzowski, Esq., A. W. Lauder, M.P.P., John Wallis, M.P.P., John Worthington, J. E. Smith, Judge Gowan, of Barrie, Wm. Gooderham, sen., John Platt, R. N. Gooch, A. G. Lee, H. Thompson, -- Henderson, of Galt & Henderson, Thomas Whittaker, A. J. Menet. R. James. Henry Pellatt, A. B. Lee, Dr. Ogden, Walter S. Lee, Com. Gen. Weir, &c., &c.

The Secretary being called upon, read the minutes of the last annual meeting, which were confirmed.

The President, the Hon. G. W. Allan, rose and said that, before calling upon the Secretary to read the annual report, he would first, as had been customary on similar occasions, offer a few brief remarks in reference to the present condition and future prospects of the Society. His duty, he was happy to say, was rendered a very pleasant and easy one by the prosperous conditions of the Society's affairs, which enabled the directors to come before the shareholders to-day with a statement showing a large increase in all branches of the Society's business, and a correspondingly large increase in their profits. On reference to the report of last year, they would observe that the paid-up stock at that time amounted to $181,190 73; this year, the paid-up stock amounts to $232,761. Last year, the loans on mortgage, at their present value, represented $295,500; this year, the loans on mortgage amount to $407,500. The deposits and interest were last year $134,563 41; this year we show an amount of $181,105. The surplus profits last year were $4,449 83; this year they have increased to $6,243. But what he particularly desired to call the attention of the shareholders to was the large increase in the Reserve Fund. At the last annual meeting the directors gave it as their opinion that the accumulation of a large Reserve Fund, offered the best guarantee to the shareholders for a permanent rate of dividend, and they recommend to their successors to keep the augmentation of this fund uniformly in view. This recommendation, it will be seen, has been fully carried out. Last year the Reserve Fund, as it appeared in their statement, amounted to $4,600; to this was carried, as recommended in the report, a further sum out of the surplus profits, of $5,400, making the total of $10,000. This year the fund stands in our statement at $10,000, but to it has since been carried $5,000 out of the surplus profits, and $4,424 bonus on the new stock lately issued, making the total amount of the credit of the Reserve Fund, $19,424—nearly double that of last year. It afforded him (the President) great pleasure to be able to state these facts to the shareholders, because he really looked upon the Reserve Fund as the sheet anchor of institutions of this kind. Under the most careful management, losses must sometimes occur, and a combination of circumstances, such as depression in trade, stringency in the money market, or bad harvests, might for a time interfere with the profits of the Society's business; but with a large reserve fund, such temporary interruptions to the prosperity of the Society would not be felt by the shareholders; and at all events, in that fund they possessed the best guarantee against loss or serious inconveniences from any such contingencies. He might further mention that this fund was carefully invested in first-class debentures, which could be readily turned into cash, if necessary at any time to do so.

Since the last annual meeting, in fact within the last six weeks, the directors had, as the shareholders are aware, thought it advisable to authorize a fresh issue of new stock to the amount of $50,000. This was issued to the shareholders *pro rata*, in proportion to their stock, as directed by the Act, and $45,000 was taken up by the shareholders entitled to it within the prescribed period; the remaining $5,000, which had not been allotted or taken up, consequent upon some few of the shareholders not holding sufficient stock to entitle them to new shares, and a few who were entitled, such as widows and some small holders, not finding it convenient to avail themselves of their privilege, was, by order of the Board, put upon the market, and immediately sold at 18 per cent. premium.

The Directors were induced to make this new issue of stock for two reasons:

1. Because opportunities for profitable investment in the shape of satisfactory loans continued to present themselves, showing that additional capital could be safely and profitably employed; and

2. Because the business of the Deposit and Savings' Bank Branch had so largely increased, that they were constantly close up to the line to which the Directors were allowed to go in proportion to the amount of paid up stock, and repeatedly during the past twelve months they had not only been obliged to decline receiving deposits from new depositors; but had also been compelled to refuse fresh deposits from old customers. Looking therefore at these facts, the Directors believing that the time had come when the capital of the Society might, with advantage to the shareholders, be further increased, and they accordingly authorized the issue of the new stock, which had now all been taken up.

In reference to the Auditors's report, he would state that the Directors were most anxious that the audit should be no mere form, but that all the Society's books, accounts, and securities should be subjected to the most searching and rigid scrutiny. This, he had no hesitation in saying, had been most faithfully done; and not only had the accounts and vouchers been verified in the usual way, but each security had been carefully examined and its present value proved by actual computation. The appointment of Auditors was a matter which was entirely in the hands of the shareholders; but it would be seen, when the resolution referring to the Auditors came before them, that the Board had ventured a suggestion that three Auditors instead of two should be appointed for the future, The object of this was was that there should be a change each year, one of the gentlemen, as was the practice in some

other societies, going out in rotation, so that there was less danger of their getting into a set form or merely formal manner of performing the work, but would come to it with a fresh eye, as it were, and so discharge their duty thoroughly and satisfactorily.

Before concluding, he would desire to state the satisfaction which the directors felt at the manner in which the officers of the Society had continued to discharge their duty. In their Secretary, Mr. Lee, they had a most zealous and efficient officer, whose heart was thoroughly in his work; and his assistant, Mr. Williamson, had also proved himself most painstaking and conscientious.

He did not think it necessary to detain them any further, but would conclude with expressing the hope that the Society would continue to be, as it has hitherto been, a profitable medium for the investment of capital, and a safe depository for the savings of the industrious.

The Secretary then read the Annual Report, as follows:—

SIXTH ANNUAL REPORT

Of the Directors of the Western Canada Permanent Building and Savings Society.

In laying before the Shareholders the usual Annual Statement of the Society's affairs, your Directors have the pleasure of again reporting that a safe, profitable, and increasing business has been done during the past year.

Applications for Loans of a thoroughly satisfactory character, having kept the capital of the Company actively employed, and the Deposit Account having also very largely increased, (this branch of the Society's business alone, shewing an increase of twenty-five per cent. over the preceding twelvemonth,) the Directors resolved upon a further augmentation of the Society's capital, by an issue of New Shares, to the amount of $50,000, in December last, at a premium of eighteen per cent.

These Shares, as directed by the Act, were first offered to the existing Shareholders in the proportion of one to every five Shares of Stock, and 902 shares amounting to $45,100 were taken up by the Shareholders, who availed themselves of the privilege within the prescribed period of thirty days, the remaining $4,900, which had not been allotted or taken up, (holders of less than five shares not being entitled to new stock,) were placed on the market by order of the Board, and were all immediately disposed of, at a premium of eighteen per cent.

The total premiums received upon the new Stock amounting to $4,424 have been carried to the credit of the Reserve Fund.

This fund it is proposed further to increase, by carrying to its credit an amount of $5,000 out of the surplus profits, which will remain after paying the two half-yearly dividends, at the rate of ten per cent. per annum.

The Directors believe that in keeping steadily in view the augmentation of this Fund, which will now amount to $19,424, they are best promoting the interests, both of the Shareholders and Depositors of the Society.

Since the last Annual Meeting, the Directors have had to deplore the death of one of their Colleagues, Jeremiah Carty, Esquire, Vice-President of the Society.

The vacancy occasioned at the Board by that gentleman's decease, was, in accordance with the Rules of the Society, filled up by the Directors, by the election of John Wallis, Esquire, M.P.P., to the Directorship for the remainder of the year; and John Worthington, Esquire, one of the members of the Board, was unanimously elected Vice-President.

The books, accounts, mortgages, and other assets of the Society, have been carefully examined by the Auditors, whose Report is herewith appended.

It affords the Directors great pleasure to state, that the Secretary and other officers of the Society, continue to discharge their duties with zeal and efficiency.

G. W. ALLAN—*President.*
WALTER S. LEE—*Secretary & Treasurer.*

Abstract of Liabilities and Assets of the Western Canada Permanent Building and Savings Society, 31st December, 1868.

LIABILITIES.

Stock paid up	$232,791	34

G. A. BARBER, WM. WILLIAMSON.

AUDITORS' REPORT.

To the Shareholders of the Western Canada Permanent Building and Savings Society.

GENTLEMEN,—We have respectfully to report the completion of our Audit of the Society's Books and Transactions for the year ending Dec. 31st, 1868; and we submit herewith, duly verified abstract Statements of Receipts and Expenditure, as well as of Assets and Liabilities, at that period.

We are gratified in being enabled to again congratulate the Shareholders on the steadily continued progress of the business of the Society, will be apparent when the Financial Statemen for 1868 are compared with those for 1867. N only has the Deposit Account largely increase but the Mortgage Securities, which at Decemb 31st, 1867, were 515 in number, representing total value of $295,500, at the present date amou to 712 in number, at an aggregate value of $40 500,—facts which speak for themselves. Ea security has been audited by the Books; it h also been carefully examined and verified, and t present value has been proved by actual comp tation.

Respectfully submitted,
G. A. BARBER. WM. WILLIAMSON, *Auditor*

Judge Gowan moved, seconded by R. Jam Esq., "That the thanks of the shareholders due and are hereby tendered to the President a Directors, for their services during the past ye and that the sum of eight hundred dollars be pa to the President, and that the sum of $4 for ea Board meeting be paid to each of the Directo for their attendance at such meetings during t year."

Judge Gowan said, that in moving the resol tion, he would avail himself of the opportunity say a few words in approval of the way in whi the Society was managed. He had only a sm interest in it, but some of his friends were larg interested. In the report laid before them, trinsic evidence was to be seen of the excell way in which the Society was managed. T was of course chiefly due to the President a Secretary. While the shareholders were legally a morally responsible, and civilly and crimina responsible, yet the President and Secret were, especially, to be held responsible for conduct of the Society's business. He had l had every confidence in his friend Mr. Allan, a he saw from this, and previous reports, that was superintending the business of the Soci with ability and success. He thought it ju cious and highly proper that the President sho give a statement in connection with the rep as had been done, for there were often matter detail that it was scarcely necessary to set do in the report, but which were interesting to shareholders. It was a remarkable achievem for any financial society to double its rest wit a year. The actions of the Board were deserv of all praise. He did not know how the s put into the resolution were placed there, bu he had any option in the matter, those were the figures he would have inserted. He thou $800 a miserable pittance to pay the Presid They required men of undoubted integrity character to manage their affairs; they must only be disposed to do well, but they must k how to do well. If he would be allowed liberty, he would place at least $1,000 in resolution, instead of $800.

Hon. Mr. Allan objected to filling in the of $1,000. He said the directors had taken responsibility of inserting the sum of $800 in resolution, and would regret any alteration b made.

Mr. R. James then seconded the resolut which was carried.

Hon. Mr. Allan returned thanks on beha himself and his colleagues at the Board.

Moved by Mr. Henry Thompson, seconded Arthur B. Lee, Esq., "That the thanks of shareholders are due to the Auditors for their ful scrutiny of the Society's transactions, and the sum of $50 each be paid them for their vices. Carried.

Moved by R. James, Esq., seconded by Worthington, Esq., "That the poll be opened for the election of directors, and that same be closed at 3 o'clock, and that Me Arthur, G. Lee, and Henry Pellatt be scrutin and that the result of the vote be handed to

President, and that the sum of $4 each be paid the scrutineers for their services. Carried.

Moved by Dr. Ogden, seconded by Charles Woodall, Esq., that Messrs. Wm. Williamson, G. A. Barber, and S. Spreull be the Auditors for the current year, out of whom the Directors shall select two to make the audit. Carried.

The following gentlemen were elected Direetors for the current year:

Hon. Geo. W. Allan, John Worthington, Hon. D. L. Macpherson, Wm. Gooderham, Francis Shanly, James E. Smith, and Samuel Platt.

At a subsequent meeting of the Board of Directors, Hon. Geo. W. Allan was re-elected President, and John Worthington, Esq., Vice President.

TORONTO BOARD OF TRADE.

The Annual Meeting of the Toronto Board of Trade was held in the Lecture Room of the Mechanics' Institute, on the 29th of January. After the preliminary proceedings, the Secretary read the following Annual Report:

The Council of the Board of Trade respectfully present the usual report of the proceedings which have occupied their attention during the year just closed; a year which may, generally, be characterized by the absence of any business apart from that of mere routine. One of the first and most continuous duties which the Council were called upon to perform, was the appointment of official assignees for the adjoining counties. This duty has not been performed without some difficulty, arising from the claims of contending parties for the office. The Council felt the responsibility of appointing persons personally unknown to them, and the further embarrassment of appointing too many official assignees in certain localities. In order to avoid these difficulties, the Council selected those parties who were recommended by the greatest number of business men and others interested in the matter of insolvency, as the best means of seeuring the most competent persons for that important office. At an early period of the year, it was determined by the Corn Exchange to have an Inspector of Grain appointed; and, upon their recommendation, the Council appointed Mr. James Rough, flour inspector, to that office. It is gratifying to be able to record that the harvest of the last year has turned out a fair average, especially of spring and midge proof wheat, now the chief cereals exported from Ontario. In certain districts a partial failure occurred from the unusual dryness of the season, but in other localities the crop was above an average. The price of wheat gradually declined from $1 60 in January last, to $1 03 in December following; whilst barley rose from 90c in the early part of the season, to $1 50 at its close. The circumstance of the coarser grains having borne a much higher price than usual in proportion to the value of wheat has induced the farmers to withhold the latter grain from the market in the hope of realizing better prices in the spring. This hoarding of wheat has produced a general stagnation and curtailment of business at a season when it is usually most active. Notwithstanding this drawback, it is aeknowledged that business is in a healthy and improved condition and money continues more abundant than usual.

The statement of the banks for 1868 shows an increase in their deposits within 12 months of more than seven millions of dollars, a fact significant of the increasing industry of the country, which is accumulating wealth in a greater ratio than at any previous period of its history. A committee of the Council was formed for the purpose of discussing the questions of banking and currency submitted by a Committee of the House of Commons for the consideration of the various bodies interested. The subject being of great scope, and many of the questions being more particularly addressed to bankers, the committee preferred leaving the whole matter to be dealt with by the latter, they being better acquainted with the working of the present system and the remedies required to bring it into harmony with the advanced position of the Dominion and the increasing requirements of its trade.

The silver question, which has occasioned so much correspondence with the various Boards of Trade in the Province, has been satisfactorily settled as far as Toronto is concerned, the merchants and traders having agreed in July last to place a discount of ten per cent on all small silver, and to continue the four per cent. discount on all large silver. This agreement has been faithfully observed by the public at large, and the consequence is that little or no inconvenience is now felt in adopting the Provincial currency as a standard of value in retail transactions. It is to be regretted, however, that the operation of the system is confined almost exclusively to Toronto. The towns and villages having to contend with rivals for business on all sides, their competition has maintained the nominal rate of the American silver coinage, thus entailing a continual loss to the country storekeepers.

At the instance of a committee of the Legislature, amendments to the Insolvent Act were suggested and transmitted to the seat of Government. A deputation was also appointed and sent to Ottawa to present to the Minister of Finance the views of the Council in reference to a modification of the tariff on certain articles of general consumption. The action of the Council on these subjects was nearly similar to that of other Boards of Trade, and resulted favorably. In the report of the Council of last year, the subject of constructing narrow-gauge railways running northeast and northwest from the city of Toronto was favorably noticed. Since then the public mind has become satisfied of their ability to perform the necessary service required for the speedy conveyance of freight and passengers. The Council have heard the testimony of able engineers personally acquainted with the construction and working of similar roads in various countries. The 3 ft. 6 in. gauge recommends itself, especially to a new country like Canada, for the low rate for which it can be built and worked as compared with the broad-gauge heretofore used. The promoters of these enterprises have at great personal labor, and against a strong combination of antagonists, procured favorable charters from the Legislature of Ontario, and are now completing arrangements for carrying into effect the powers conferred on them by the Acts. It is satisfactory to note that these railways have met with the most liberal support from the taxpayers of this city—a bonus of $400,000 having been all but unanimously granted to aid in their construction; and, in addition, a generous support has been received from the municipalities through and near which the railways will pass, showing clearly the country, as well as the city, is alive to the important benefits which these railways will confer in lessening the distance to market, and cheapening transport on all the merchantable productions of the country.

Great efforts were made to induee the Board to petition the Legislature for a grant of land to aid the construction of the Huron and Ontario Ship Canal. The Council had the subject under discussion, and adopted a report in favor of granting the land by the Government, A memorial was prepared for submission to the Board, with a view of obtaining a fuller expression of opinion on so important a question; two meetings of the Board were held, both of which were largely attended by the members, when the question was fully and ably discussed, and the action of the Council reversed by an almost overwhelming majority. The following resolution was carried:

Resolved, That neither the commercial, shipping, nor agricultural interests of the Dominion of Canada, or the Province of Ontario, require the Huron and Ontario Ship Canal, and that the report of the Council be not adopted.

During the past year several international commercial conventions were held in different cities of the United States, with the object of harmonizing the laws and customs of commerce, and extending its operations by means of additional railways and canals, without reference to geographical boundaries. In the promotion of this laudable object your Council fully sympathize as the extension of trade in a country so closely connected with ours must exercise a favorable influence on our mutual relations, and under proper appreciation, be a means of stimulating us us to develop the latent resources of our mines and forests. In this connection it is to be regretted that the endeavor to organize an Intercolonial Board of Trade in Canada should have failed to meet with success, as an aggregation of the various Boards would have brought together a number of able minds, for the discussion and consideration of questions of general interest to the commerce of the Dominion, and could not fail to contribute to a better understanding on many points now at issue with the Maritime Provinces. The Council would urge to their successors that the subject should not be lost sight of, as much good may be accomplished by holding meetings similar to those being held in the United States, with the broad and lucid views of which your Council heartily concur.

Your Council observe with pleasure a strong desire on the part of a number of the most intelligent merchants of the United States for a renewal of the Reciprocity Treaty, which for ten years existed between the United States and this country, and for the attainment of which the Board of Trade labored assiduously for a number of years. It may not, therefore, be considered out of place to make a brief allusion to the subject in this report. Under the operation of that treaty the trade and commerce of both countries was greatly extended and materially benefitted, and a renewal of its provisions would be in accordance with the commercial spirit of the age. It is gratifying to record the fact, however, that the loss anticipated to our trade from the abrogation of this treaty has been but slightly felt, new markets have been found and opened for our surplus products in the Lower Provinces, the West Indies and South America. A direct trade has thus sprung up with countries heretofore supplied almost exclusively by the United States; our altered position necessitated a search for new channels for exports, and our merchants have proved equal to the emergency by shipping their manufactures with advantage to the ports of the Mediterranean and the Levant. It is a favorite idea with some writers in the United States that the establishment of a Zollverein such as exists between Prussia and the German States would be the right thing for Canada to adopt, the advocates of such a system forget that the disparity of our tariffs would form an insurmountable barrier to such a proposition at present.

The Council observe with satisfaction the efforts that are being made by the Dominion Government to secure a short and easily accessible route to the Red River settlement within our own territory, which will be the means of opening for emigration a boundless extent of country, stretching from Lake Superior on the East, to the foot of the Rocky Mountains on the West, and containing millions of acres of the most fertile land, capable of sustaining an immense population. According to reliable information, the trade between St. Paul and the Red River now amounts to four millions of dollars yearly, the greater part of which may be secured to Canada by opening the new route of 450 miles (shortening the distance to Fort Garry *via* Fort William 150 miles) mostly by water communication, as against 600 miles of land transport *via* St. Paul, and at a reduction of cost of $50 per ton, an advantage sufficient to divert the trade of that district from the United States to Canada.

A committee of the Council was formed some time since for the purpose of suggesting amend-

ments to the Act incorporating the Board, but no report was presented on the subject. It is now nearly a quarter of a century since the Board was incorporated; during this period many changes have taken place in the trade of the country, which call for corresponding alterations in the constitution of the Board. Your Council would respectfully suggest to their successors in office that the Legislature of Canada should be petitioned to amend their charter so that it may harmonize more fully with the advanced state of commerce at the present time.

The great increase in the wholesale and manufacturing business in Toronto that has taken place within the last two years, has had a corresponding effect in increasing rents and the value of real estate. While this improvement may be attributed in some measure to the city having become the seat of Government of Ontario, which has been the means of giving a permanent increase to the population, and making it an attraction to a large number of transient visitors, the chief cause of this prosperity may be found in the circumstance that our wholesale dealers are able to compete successfully with those of other cities; this has attracted a large number of buyers to Toronto, who find it to their interest to purchase their goods in the nearest and most convenient market.

The proposed construction of the narrow-gauge railways has also favorably influenced the value of property, as they are calculated to open new avenues of trade for our enterprising citizens, and to give employment to a large class of artizans and laborers.

All of which is respectfully submitted.

JAMES G. WORTS, President.
CHAS. ROBERTSON, Secretary.

The following office-bearers were elected for the ensuing year, by acclamation :—

President, Mr. J. G. Worts ; Vice-president, Mr. Elliott ; Secretary, Mr. Charles Robertson, Treasurer, Mr. J. Turner.

Council—A. R. McMaster, T. C. Chisholm, J. Gordon, A. M. Smith, R. Wilkes, C. Robertson, H. S. Howland, G. Laidlaw, J. C. Fitch, Hon. J. McMurrich, Noah Barnhart, W. C. McDonnell, F. Coate, W. D. Mathews, J. D. Merrick, James Adamson, H. S. Howland, James Young, J. C. Griffith, J. C. Fitch, C. W. Bunting, J. C. Campbell, W. J. Shaw, and Charles Parsons.

Harbour Commissioners.—Messrs. J. G. Worts and J. Harris.

Hospital Trustee—Mr. H. S. Howland.

Insurance.

Fire Record.—Toronto, January 29.—A fire broke out in the basement of Hanlin & Co.'s confectionery store, 119 Yonge street. The flames were soon extinguished by the fire engines. Hanlin & Co.'s stock, which was insured in the Home and Hartford for $1,200, was consi lerably damaged by the heat and water, but the building, which is the property of Mr. Burns, of Richmond street, and is insured for $1,700 in the London Insurance Co., did not sustain any material injury. Origin unknown, but supposed to have been accidental.

St. Mary's, January 24.—The cheese factory, owned by Mr. Mayhew, of this place, and located in East Nissouri, was destroyed by fire. The factory was valued at $2,000, and was insured. The fire is believed to be the work of an incendiary, for fire had not been in the building for two months or more.

Garafraxa, January 29.—Barn of John Kirkleton, 13th concession, was totally destroyed by fire. It contained 120 bushels of wheat, and a number of farming implements. There was only a small insurance on the property

Mount Brydges, January 24.—The steam sawmill belonging to Mr. Jeremiah Loudon was entirely destroyed. The loss is said to amount to $4,000, supposed to be the work of an incendiary.

In consequence of the insufficient supply of water for fire purposes, in Ottawa, the Royal Insurance Company decided to discontinue its agency there.

Granby, Eastern Townships, Jan. 23.—A fire broke out in the carpenter shop of Mr. Harvey, which was consumed with its contents. The fire communicated with the dwelling house of John Bradford, which was destroyed and with the store of James A. Downs, which was considerably damaged, as was also the goods in being removed. The loss of Messrs. Bradford and Downs supposed to be about $1,200 is covered by insurance in Mutual.

Clinton, Jan. 25th.—The House of Humphrey Snell was consumed. An exchange says : The fire made such rapid progress that the inmates had barely time to escape. Loss not less than $500. There was an insurance of $200 on building and furniture.

Pain Court, Township of Dover, Ont., July 17. —Some evil-disposed person placed fire in a chest containing $800 worth of church vestments in the Roman Catholic Church at Pain Court township of Dover. The inhabitants of the village immediately held a meeting and resolved to offer a reward for the incendiary.

Carleton, N. B., Jan.— A fire broke out in the house of Mr Carpenter, Guilford street, and partially destroyed it.

Quebec, Jan. 29.—A fire broke out in the Tobacco Manufactory, Queen street, St. Roch's, belonging to John Lemesurier, Esq. The damage was principally confined to a room about 10 feet square. Nevertheless damage was effected to the amount of $1,000. The stock and fixtures were insured to the amount of $4,000.

Montreal, January 30.—The driving-house of Molson's Brewery, St. Mary street, was discovered to be on fire. The alarm was quickly given, and the fire brigade were soon at the scene. Two powerful streams of water were poured in upon the fire, and the supply being abundant, the flames were soon got under and extinguished, before much damage was done. The fire appears to have originated from the igniting of some shavings and kindling-wood, left carelessly about the boiler furnace for heating or drying purposes. Happily, the fire was confined to the room where it originated; if it had burned through into the flat above, the entire building might have been destroyed.

Owen Sound, Jan. 22.—House of Mr. Henry Sayers, 10th concession of Sydenham, was consumed by fire. He lost all his furniture and clothing; no insurance.

Milltown, Ont., Jan. 26.—The dwelling house and carriage shop belonging to Mr. George S. Doxsee, in Milltown, township of Tyendinaga, was wholly destroyed by fire. The fire was accidental; no insurance.

St. John, N.B., Jan. 25.—The Lawrence Hotel, Prince William street, was discovered to be on fire. The fire was extinguished in less than half an hour, but not before the building was considerably injured, the floors being torn up and the house deluged with water. There was some insurance, but not sufficient to cover the damage.

Orillia, Jan. 22.—The residence, with nearly the whole of its contents, of Mr. William Walters, was totally consumed. The origin of the fire is not known, but is supposed to have caught from the chimney. The loss is stated to be about $600 or $700.

Quebec, Jan. —. A fire broke out in a hay-loft of a stable in rear of Mr. Garneau, saddler, St. George street, St. John's suburb. The Fire Brigade were soon on the spot and were successful in extinguishing it before considerable damage was done. It is suspected to be the work of an incendiary.

Edmonton, Ont., July 25.—The residence of R. Quin, was entirely consumed by fire. It is supposed that the fire caught through some defective stove-pipe in the upper story. The most of the household effects were saved.

Burgess, Ont., Jan. 23.—The dwelling house occupied by Michael Stanley, Reeve of Burg caught fire by means of a defective stove pipe, was burned to the ground. The furniture household utensils were all saved, but the h was a total loss. Over a hundred bushels of po toes, with some barrels of pork, which were the cellar, were also destroyed. Loss will amo to over $500.

Agricultural Mutual.—A London pa says that this Company holds nearly 31,000 po cies, of which over 11,526 were issued during past year, being an increase over any previ year of more than two thousand policies. cash balance on hand is stated at $49,000, wh includes $12,000 converted into Dominion sto The directors at a late meeting determined u investing $13,000 more in Dominion stock. T figures unfold a flattering tale.

Montreal Fire Marshals.—The follow is an interesting list of cases in which suits brought by the Fire Marshals against C Bertram for not signing their certificates of vestigation: Bourdon & Co,, Pratt's buildi $20.50, 2d December; Frechette building, Cr street, 31st December, $20.75, damage, $3; L vecchio & Co., St. Paul street, 17th Decem $20.75; carpenter's shop, St. Joseph street, N Years day, $20.50, damage about $5; stable rear of Waverley Terrace, 4th December, $0. examining warehouse, 8th December, $37; Ca Shepherd, Beaver Hall, 13th December, $20. Louis Richard, Sanguinet street, 16th Decem $20.50.

Fires in St. John during 1868.—The C Engineer of the fire department reports to local papers as follows: From the 1st Janua 1868, to 1st January, 1869, there were eigh four fires and alarms in this city, an increas forty-six over those of 1867. The aggregate of property by these fires was was about $14,2 a decrease of $3,790 on the estimated loss f like causes in the previous year. About $10, of the loss during last year was susta ned at fires, one on the 15th of January, 1868, at old water-works building, and the other on the of April at Brown & Hamm's livery stables.

THE LATE FIRE AT OTTAWA.

Our own correspondent furnishes us with following particulars relating to thisfire :—

The fire which consumed Desbarats' bloc supposed to have arisen from the depositing hot ashes near a wooden staircase in rear of buildings. Had the division walls run thro the roof, the fire would not, probably, have exte ed beyond the first house attacked. It is possible to state the exact amount of loss u the *debris* is removed. When it is removed engine, boiler and machinery will be exami and the damage ascertained. The whole of presses, type, tools, &c., were destroyed as wel the stock of paper, books, &c., with the excep of about $200 worth. The cost of the build was $46,000. The insurances upon it are as lows: Royal, $8,000; Lancashire, $8,000; Qu $4,000; Provincial, $5,000. Total, $25,000.

The cost of the presses, &c., was $40,000. insurances upon them are: Ætna, $4,000; Ho of New Haven, $4,000; London Assurance, $4, Hartford, $4,000; Provincial, $4,000. T $20,000.

The stock cost $40,300. The last named c panies are on it to the extent of $3,000 e Total, $15,000.

The boiler, engine, &c., office furniture $5,100. The insurances on them are: Æ $1,000; Home, $1,000; London Assurance, $1, Hartford, $1,000; Provincial, $1,000. T $5,000.

The Government loss on printed matter is tween $7,000 and $8,000, covered by a polic the Provincial for $4,000.

Mrs. Trotter's loss is $5,400; insured in

na of Dublin for $3,000. Mrs. McGuire had insurance. Messrs. McKenzie & Childs' loss stock of ready made clothing is $1,200; in-ed in the Home for $2,000. A frame hotel on opposite side of the street, and rear premises re consumed. The building is insured in the me for $1,400; loss, total. The furniture is ured in the Imperial for $1,000; loss, $800. re was no insurance on the offices of the Royal adian Bank and Ottawa and Prescott Railway.

The Canadian Monetary Times.

THURSDAY, FEBRUARY 4, 1869.

IE WESTERN CANADA BUILDING SOCIETY.

A report of the proceedings of the Annual eeting of this Society, which will be found another columns, shows that a profitable siness has been done during the past year. e sum of $192,694.87 was loaned on mort-ges and stock, and $172,376 was received way of deposit. The mortgage securities, ich were last year 515 in number, repre-nting $295,500, now number 712, and an gregate value of 407,500. New shares to e amount of $50,000 were issued last De-mber. Some of them were sold at a premium eighteen per cent. After paying two divi-nds of five per cent, the reserve fund s been raised to $19,424, by the addition $4,424 premium received on the new ck, and $5,000 surplus profits. It is not be wondered at, therefore, that expressions congratulation were exchanged. The icers of the society have earned the confi-nce of the shareholders, and, judging by e increase in deposits, that of the public ewise. The President, with much grace, clined to accept increased remuneration. will be seen that John Worthington, Esq., s elected unanimously to the office of Vice-esident, and S. Platt, Esq., placed on the ard. Thorough business men, such as ey, are of great service to an institution of is kind. The Board is not one merely in me, but a really serviceable staff of shrewd en, who appreciate their responsibilities, and make time to fulfil their duty to those who elect them. Testimony is again borne to the efficiency and zeal with which Mr. W. S. Lee discharges the duties of Secretary.

MR. HATCH WEEPING AT THE GRAVE OF RECIPROCITY.

Mr. Israel Hatch has favored the world with another report on the defunct treaty of reciprocity between the United States and Canada. It is a desultory document, taking a partial and prejudiced view of the facts, and leading to loose, unreasoned, and untenable conclusions. The leading idea of its author is, that a true reciprocity treaty "would include all the productions of labour on both sides, or at least provide for a fair and equal exchange of them." A free exchange of all the products of labour does not necessarily mean the same thing as "a fair and equal exchange of them;" because, if they were subject to equal duties, Mr. Hatch might choose to consider that a free and equal exchange. But it is one thing to exchange raw products free of duty, and quite another thing to provide for any reciprocal exchange of manufactures. In the latter case, a common duty would have to be agreed upon, if duty there were at all. If there were no duty, insuperable difficulties would present themselves on both sides. The Americans are under legal obligations to treat other countries besides Canada on the best terms they extend to the most favoured nations. How would they get over this difficulty, short of the impossible abolition of all customs duties? And for Canada, we could not dispense with this source of revenue, nor could we enact a discriminating tariff against the nation which we call Mother Country, and to which we look for protection. It would be impossible, in the present state of things, to agree upon a common duty. The United States could not accept a low or moderate tariff, and about the last thing Canada would think of would be to adopt theirs. If there is to be no new reciprocity treaty till we can agree to include manufactures, there will be none at all.

We do not undervalue the advantages of a reciprocal free exchange of the raw products of the two countries. But the very circumstances of their being mutual is a reason why we shall never be tempted to purchase them at any figure much above their natural price. That price is the equivalent which reciprocity implies. We gave a little more in 1854, and we might be tempted to do so again, but we now know, from the best of all tests, that we can live and thrive without any such treaty at all. We believe both countries would benefit by having one; but we are not going to purchase it at a price disproportioned to the advantages. The circumstance of the American Government procuring a new report on the subject, implies dissatisfaction with the existing trade relations. That feeling is well founded, but the Americans brought about the present position of the matter, in a fit of spleen; and time and reflection may have given them occasion to relent. But, if we may judge from Mr. Hatch's report, they have not yet come to that state of mind in which a treaty acceptable to Canada is likely to originate.

Mr. Hatch probably exerted more effective influence than any other single individual in the crusade that led to the breaking up of the old treaty, and he is not likely to make any suggestions for the formation of a new one that Canada could possibly accept. He is bound hand and foot to the canal interests of the State of New York. That is the source whence all his inspiration on the reciprocity question has, from first to last, been drawn. He recommends Congress to Grant a money aid to the Erie Canal, and Canada to yield "to the destiny unalterably fixed by geography, climate and boundaries," and cease to cherish an ambition to profit by the trade of the Western States. He is grieved to see us throw our money away on canals and railroads, when we ought to be contented with the Erie Canal. But before he addressed this advice to Canadians, Mr. Hatch might have offered it to the great and rapidly increasing Western States. It will, we fancy, be more than he can do, to convince them that they ought to be satisfied with the Erie ditch, and not seek to utilize the magnificent highway afforded by the great St. Lawrence.

Mr. Hatch is not easy to please. He makes it a sort of crime in us Canadians that we can build ships for half what they cost in the States; that we possess boundless forests of untaxed timber; that we can build railroads at comparatively little cost, and that when built they are untaxed, and offer too great facilities for transportation. We, on the contrary, see in these things so many reasons why we should not submit to the destiny our monitor would prepare for us. While Mr. Hatch weeps over the grave of the reciprocity treaty of 1854, he should remember that he but bewails his own victim; and we think he is not destined to see a resurrection in the form which constitutes his divine ideal of one-sided trading advantages and canal monopoly.

BOARD OF TRADE.

We print elsewhere the annual report of the Toronto Board of Trade. It gives an elaborate statement of the general features of the trade of Toronto during the past year, and deserves a careful perusal.

THE OTTAWA FIRE.

The heavy loss which the Provincial sustained by the late fire in Ottawa affords additional evidence of the correctness of our remarks respecting the management of this Company. For a Company, comparatively small, to accumulate risks to the extent of $17,000, on a printing office and its contents, is little less than tempting destruction. That sum represents their gross receipts from fire premiums for, probably, two months, and its loss is very suggestive of embarrassment, straitened circumstances, a further call on subscribed stock, besides disagreeable comments on the part of directors and stockholders. We believe the Company will be able to pay the claim, but, at the same time, we cannot help thinking that another such disaster would not be successfully encountered. It seems that some of our Insurance Company managers have yet to learn that there are other maxims in Insurance besides "trust to luck." We strongly advise the Directors of the Provincial to overhaul the policies of the Company, and send their inspector throughout the country with unlimited powers of cancellation. To carry on management such as the above indicates can have but one issue.

The exodus of Insurance Companies from Ottawa will bring the good people of that city to their senses. The cry there is water, water, everywhere, but not a drop to extinguish a fire.

INSPECTION OF VESSELS.

A correspondent last week called attention to some irregularities in the present system of inspection, which are worthy of the attention of lake underwriters. He states a case in which an owner of vessel property suffered loss by the standard of his vessel being lowered during the season of navigation. If the quality and outfit of the vessel remained the same as when last inspected, the case was one of undoubted hardship, not to say positive injustice. If our information is correct these cases are not of unfrequent occurrence. The difficulty arises from a system of inspection which is defective and unwise.

The Inspectors are thoroughly competent, but they are not disinterested. Acting as officers of the Association of Lake Underwriters, they are at the same time—all of them—salaried officers of the different Insurance Companies composing that Association. The present method is this. The marine inspectors of several different companies make a tour of inspection each year, in February or March, occupying about one month of their time. To facilitate the completion of the duty, the territory—Ontario and Quebec—is divided among them, Toronto being made the starting point. These officers fix the standard of all new vessels, and examine into the condition of all others preparatory to the business of the incoming season, and report to the Association. Many of these reports are not correct or reliable. Vessels are often reported as rebuilt, when it is only rails and decks that are made new, instead of a thorough rebuild, which can only be done by placing the vessel in dry dock. Then these Inspectors often differ in opinion as to what constitutes a standard vessel, or one fit to carry grain. In consequence of this, some companies have been insuring vessels as standard, which other companies would not take, on the ground that they did not come up to the mark. This could scarcely be otherwise. The inspector is interested in getting the insurance of the vessel, and is therefore inclined to be friendly to the builder that patronizes him. Take a new vessel which a strict and impartial inspector would make A 1, for instance, it would be an easy matter, if a handsome risk were offered to a particular company to which the inspector is attached, to make the vessel A 1. The difference is but slight and only few commercial men could detect it; still it would be most important to the owner. The same evil exists in the case of vessels fitting out for a season's business. It is, therefore, important not merely to ship owners, but also to shippers, to have a radical change brought about.

As it is, grain is often carried in inferior vessels which would not be allowed to take it if they had their desert s, but would be compelled to resort to the lumber or coal trade. The owners of first-class vessels would then reap the full advantage of keeping their vessels in thorough repair.

A strict and impartial method of inspection is required and must be had. An independent Inspector, paid by the Association, is wanted, whose reports would be examined and revised by the Association, and be regarded as final by all its members. It would be the duty of this Inspector to force all doubtful vessels upon the "Gridiron" for a thorough examination, where their grade could be satisfactorily ascertained. The sooner this step is taken by the Association the better for all concerned.

Mining.

MADOC GOLD DISTRICT.

(From our own Correspondent).

BELLEVILLE, Feb. 1st, 1869.

The annual statements of some of the mining companies of this district have been published, but for the most part contain little matter for comment. The only one which shows a "clean bill of health" is the "Grand Trunk Employees' Gold-mining Company," whose stock is stated at $100,000, paid up $100,000, liabilities nothing.

The Merchants' Union Gold Mining Co., held and adjourned meeting on Thursday last, at which it was resolved to raise $4,000 by voluntary assessment, one half of which is appropriated to clear off the outstanding liabilities; the other moiety to be employed in developing the mine, and in the purchase of additional machinery to increase the efficiency of their mill. The sum of $2,350 was subscribed for before the close of the meeting.

Work is still progressing under favorable indications at the Richardson mine. A few days ago the miners struck a cross vein of quartzite, from the bottom part of which were obtained specimens shewing visible gold in promising quantity, accompanied by the carbonaceous mineral which formed so prominent a feature at the first opening of the shaft. The work of reduction is being carried on slowly, as the supply of ore from the mine, is limited, owing to the small number of men employed. As the clearing up will be deferred until a sufficient quantity shall have been crushed to make a satisfactory return, no definite information can yet be had; but Mr. Dunstan reports that after three tons had been put through, he tried the mercury and obtained four ounces of strained amalgam, which ought to contain from 1½ to 2 oz. of gold.

The County Council of the County of Hastings, at their last session, held Jan. 26th and 27th, passed a By-Law, granting an annual sum of $200 towards the establishment of a professorship of Mines, Mineralogy and Agricultural Chemistry in the Alexandra University, (late Albert College) of Hastings and Belleville, and have nominated Mr. James T. Bell, of Belleville, as the first occupant of the chair.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

There has been more freedom in the market this week than for some time past, there being buyers and sellers in most cases at quotations. In Government Securities there have been large transactions and at advanced rates.

Bank Stock.—Montreal declined to 138 in the beginning of the week, but is now firm and in demand at 138½ with no sellers under 139. Buyers offer 103 for British but none in the market.—Ontario has been freely dealt in at 100, 100½, and 100¼, and closed in fair demand. The high prices offered for Toronto have attracted sellers to a limited extent. Sales of Royal Canadian were made at 85 to 85½; there are now buyers to a limited extent at 86. Commerce sold at 102½ and is still offered at this rate. Gore is in active demand at 40, sellers ask 45. Merchants has been in good demand during the week at advanced rates; last sales were at 109½. Buyers offer 99 for Quebec: none in market. City is 2 per cent higher; no sellers under 103. Buyers offer 109 for D. Peuple; no sellers. Nationale is asked for at 100; none offering. Jacques Cartier could be placed at 108; no sellers. There are no sellers of Union; buyers offer 103 to 103½. Other banks nominal.

Debentures.—There were large sales of sterling five per cents at 95½ to 96, and of Dominion Stock at 105½. Very few Toronto offering; they are readily taken at 6¾ for cash. No sales of County to report; they continue very scarce and in great demand.

Sundries.—No sales of City Gas; 10 would be paid. No important transactions occurred in Canada Permanent Building Society; 12 would be paid; small sales of Western Canada occurred at 118½, which price would readily be paid; Freehold is 2 per cent higher, the last sales were at 109½. Montreal Telegraph is offered at 134½; no buyers over 134. There is a limited demand for Canada Landed Credit at 75. A few good mortgages have been offering during the week at 8 per cent. Money is plentiful on good paper.

BANK OF ENGLAND.

	Jan. 16, 1869.	Jan. 17, 186
Bank rate of discount	3 per cent.	2 per cent
Bank reserve.....	£9,482,964	£12,761,42
Bank stock of bullion	18,608,324	22,016,21
Price of Consols.....	92⅞ x d	92¾ x d

The money market has again exhibited great ease, and the supply of capital being in excess of the demand, the rates of discount are rather lower

irst-class paper of short date has been taken at ½ to 2¾ per cent., and six months India bills at per cent. On the Stock Exchange, advances on nglish Government securities were made at 1 to ⅛ per cent., but yesterday the rate was ⅛ to 1 per nt. higher. The Bank return shows a decrease £11,902 in the reserve, and of £38,963 in the ock of bullion. The other items of the account ow the usual heavy variations, consequent on e Government payments.

HE DEBT OF THE LATE PROVINCE OF CANADA.

An interesting correspondence between the on. Mr. Rose, Minister of Finance, and Hon. r. Wood, the Treasurer of Ontario respecting e public debt, has been laid before the Legislature. r. Rose reduces the points of importance which e in dispute between the Dominion of Canada d the Province of Ontario to five:

1. Should debts due by the Grand Trunk, e Great Western and the Northern Railads go in diminution of the debt of Onrio and Quebec at their par value? He conds that these debts are to be considered the solute property of the Dominion according to e reading of the Confederation Act and the irit of the compact, as Nova Scotia and New unswick put in a railway asset of $11,000,000. r. Wood contends that though these railway bts may be the property of the Dominion, they e to be taken in reduction of the public debt of e late Province of Canada; that the acquisition the lower province railways, to be run under vernment control, will be an additional burden the Dominion exchequer, and Ontario will be lled upon to contribute by its taxes the larger rt of the sum necessary to run these railways well as the Intercolonial; and that the sacrie Ontario will have to make will be quite fficient without giving up $4,359,272 of good bts. Mr. Rose replies that evidence will be thcoming to establish the understanding of the mers of the Union Act.

2. Should the amount due by the Bank of per Canada be taken at its face by the Donion as a banker's balance and deducted from e provincial debt? Mr. Wood contends that is a bankers' balance to be assumed at its nomal value, and that the Dominion alone has wer to make it worth its face, which if it reins from doing, Ontario and Quebec will be the lers. Mr. Rose considers that a "bankers' lance" means cash available to the Dominion in kers' hands at the time of the Union, and not ubtful debts. In December, 1863, the bank mitted its inability to pay in cash the million d a half it owed the Government. That debt e bank agreed to liquidate by half yearly instalnts of $50,000 with interest at three per cent. 1864 the bank obtained an extension of time depositing $883,300 of Grank Trunk postal nds as collateral security. Further negotiations k place which prevent the debt being viewed the light of an available bankers' balance to be umed by the Dominion as cash. Up to this e the Dominion could not have collected it. ere is some doubt as to whether the whole of assets must not be realized before coercive asures can be effectually taken by the Goverrnt, and it is not the interest of Government or ple that the arbitrary process of a writ of ecut, with its attendant cost and sacrifice, uld be substituted for the course taken. wever the Dominion "will continue to make ry effort to make this a good debt." Mr. Wood draws attention to the distinction in the th section of the B. N. Act between a "kers' balance" and "cash." He says that le the claim was admittedly good—assets sufficient—writ of extent issuable—the Dominion Government intervened and assumed the claim, a by its legislation (31 Vic. c. 17) without the sent of the Government of Ontario, dealt with it in such a way as to deprive itself of all the advantages which it had. It does not, therefore, rest with the Dominion to say that it is now doubtful and not to be taken at par by way of reduction.

3. Whether all investments by the late Province of Canada out of Trust moneys, and on account of Trust funds, should be retained by the Dominion at their face, and the Trust funds be a liability of the Dominion to their full value?—Mr. Rose considers that Mr. Wood admits that the Trust securities should go with the funds and be deducted from the amount which the Dominion has to pay on account of these funds.

4. Whether the whole of what is termed indirect debt incurred on account of, or as security for various institutions, should be put on the same footing and deducted absolutely from the gross liability? This debt includes the Common School, Upper Canada Grammar School, Upper Canada Building, and Lower Canada Education funds.—Mr. Wood says the law makes it obligatory upon each institution or concern on whose behalf the advances were made through debentures by the late Province, to provide for the payment of the interest and debt of these debentures, and as such institutions and funds ($150 400 debt excepted) will without reduction come to Ontario and Quebec, there is no conflict. Mr. Rose considers that whatever claims may in future be put forward as regards the capital of these funds, cannot in the meantime affect the amount of the debt, its apportionment or interest.

5. Whether the Dominion should pay five per cent., semi-annually, on the amount at the credit of the Common School, Upper Canada Grammar School Fund, Lower Canada Superior Education Fund and the Normal School Fund and should settle it at present?—Mr. Rose proposes to pay five per cent., the same rate of interest on the debt composed of these funds as is charged on the excess of debt beyond the sixty-two and a half millions which is created partly by these funds. In all transactions between the Dominion and the Provinces five per cent. is the rate fixed. Mr. Wood says the Government of Ontario has no authority to deal with these funds as proposed. Ontario might, perhaps, prefer to invest these funds at six per cent. instead (not getting the principal) of receiving five per cent. in perpetuity. As these funds are for public purposes, Ontario may sweep them away altogether.

In conclusion, Mr. Wood suggests that a plan be adopted by which differences might be settled. Mr. Rose does not believe anything like arbitration to be necessary, but considers that negotiation will afford a just solution of any differences.

CHARGE OF FRAUD.—A very unpleasant difficulty has occurred at Kingston in connection with the Royal Canadian Bank agency there. Mr. George E. Small, late Manager of the Bank, and Mr. Isaac Barnes, teller, were arraigned before the Police Magistrate, charged with a conspiracy between the two to defraud the bank by cashing a bill of exchange for £1,000 stg., drawn by the wife of Mr. Small on a Mr. Gardyne, of England, which bill was not accepted. It is also charged that Mr. Small's cheque for $100 was cashed by the same clerk, in disregard of his instructions, while there were no funds to Mr. Small's credit.

INSOLVENTS.—The following list of insolvents appear in the *Official Gazette* of last week :.George Fletcher Rice, Portage du Fort; Lindsay Pillar, Williamsburg; David Vrooman, Mount Brydges; James F. Kidner, Montreal; Donald MacDonald, Orangeville; Horatio Nelson Jones, Quebec; Charles Rimer, Portage du Fort; Theodore Brown, Hillier; Jas. Flynn, Orangeville; Rlie Migneron, St. Adele; Cox & Stevenson, Montreal; Samuel Stewart, Albion; Joseph Hilair Prineau, St. Jean; Chrysottonie; Joseph May, Montreal; Carlos D. Meigs, St. Thomas, Depierreville; Geo. W. Creighton Kingston.

RAILWAY FROM TORONTO TO ST. PAUL.

Mr. Rankin suggests the construction of a line from Toronto to a point on the River St. Mary, in Algoma. He says :

There are several lines of railway now in course of construction through the State of Minnesota, which will terminate at or near the head of Lake Superior. They will all be completed before it would be possible to build the one I propose. These roads will throw an enormous amount of traffic upon the lake, which must pass down the River St. Mary on its way to the east, while the whole of that traffic might be intercepted at or near the Sault St. Mary, and brought down by rail through Ontario, via Toronto, to its destination on whatever point on the seaboard. The distance from Sault St. Mary to Toronto is less than to Detroit, while to Buffalo it is about the same.

A railway bridge, offering no obstruction to navigation, can be built over the main channel to Sugar Island and thence over the shallow stream which separates that island from the mainland of Northern Michigan. This connection with St. Paul can be established by a line hundreds of miles shorter than by any other practical route, passing too, from one extreme point to the other, through a country favorable to agricultural pursuits. On its way to St. Paul, the proposed line would intersect the railway from Green Bay to Marquette, now in operation, and thereby serve the interests, and secure the traffic, to and from the great Atlantic cities, of the numerous and important towns, and mining settlements, along the south, or American shores of Lake Superior, while the line to St. Paul would be the germ of a great northern international route, via Fort Abercrombie, to Fort Garry, and thence all the way through British territory to the Pacific.

Such a line as this would pay "from the start," as the Union Pacific does now, before it is finished; while a road to Red River, by the north of Lake Superior could not pay at first. When the time for building that road has arrived, however, it will be found a great advantage to have a road eastward from the Sault in full operation.

It may be urged that a road to the River St. Mary would receive no way traffic, passing as it would, the greater part of the distance through an unsettled country, but it must be borne in mind, that wild as that country *now* is, *it is fit for settlement*, and only requires to be made accessible to insure its being rapidly filled up, so that while the work is progressing the settlement of the country will go on, and the foundation of a way business be established; though irrespective of way business, the through traffic that would find its way by this route, as surely as water finds its level, would be more than sufficient to make the

enterprise highly remunerative. I would suggest, that from Toronto, the line should skirt the Eastern shores of Lake Simcoe, thence proceeding in a direction west of north to French River, crossing which its course would be westward to the River St. Mary.

[We give the above for what it is worth. The proposition to build a bridge over the main channel to Sugar Island—from half a mile to a mile in width, according to the charts—would be a formidable undertaking to begin with.—ED. C. M. T

PRO RATA FREIGHT.—A bill has been introduced into the Illinois Legislature to compel the railroads in that State to charge a uniform rate for the transportation of freight in proportion to the distance it shall be carried, and providing that any railroad that charges more than the *pro rata* shall pay the owner of the freight five times the amount wrongfully collected. This is not a novel proposition, but it *is* an unreasonable one.

Commercial.

Toronto Market.

Business for the month of January was dull owing to the unseasonable weather. For the want of sleighing produce was brought forward very slowly, and sales, both by wholesale and retail merchants, were entirely below anticipations.—Within a week or ten days, however, the winter movement has commenced in good earnest, and grain is pouring in at a brisk rate at all the different receiving points. This has improved the tone of business, but the effect on prices has been most unfavorable. The decline which has occurred must represent considerable loss to a number of firms.

GRAIN—*Wheat.*—Receipts by cars 12,800 bush. and 17,000 bush. last week. The market for Spring is dull, and 3 to 4 cents lower. Sales occurred during the week at $1.02 to 1.03, and to-day, the (3rd Feb.) a few cars sold at $1.00, the market closing with sellers of round lots at that price, without buyers. Fall is 5 cents lower and closed dull; a lot of 2,000 bushels, of a good sample, changed hands to-day at $1.05, and buyers are holding off even at the reduced quotations expecting fall to go to $1.00, and spring to 90. The decline is owing to the heavy receipts and the existence of only a small demand. The stock of wheat in store here is about 90,009. *Barley.*—Receipts light; the market is steady at $1.30 to $1.35 for car loads delivered, some sales occurring within the range of these quotations. The latter figure was refused for one or two round lots f.o.b. *Peas*—Receipts very small, and no business doing.—*Oats*—Receipts 13,200 bushels and 6,800 last week. There is only a quiet demand, and the market is a little easier. Sales of cars were made at 53c. *Seeds*—Timothy nominal at $2.00 to $2.50. Clover very unsteady; there is some speculative enquiry, and a little business doing; we quote, $6.25 to $6.50; flax $1.60 to $2.00, according to quality.

FLOUR.—Receipts 2,200 brls., and 2,500 brls. last week. Flour, as well as all breadstuffs, is dull, and tending lower; there are few buyers, and in the present state of the market holders are not disposed to offer. The stock here is about 10,000 brls. There are sellers of No. 1 superfine at $4.50, and some demand at that price. Other grades are not quotable. Sales of No. 1 during the week were, 500 brls. at $4.53, on cars at Weston; 100 brls. at $4.55, the same place; 200 brls. at $4.35, at Norval; 200 brls., sold as fancy, brought $4.70 at Norval.

PROVISIONS.—*Dressed Hogs*—The market is firm and again higher; receipts have been liberal and a good business done at quotations. *Mess Pork.*—Firm and higher. *Lard.*—In light stock and firm at at 16c. *Butter.*—Quiet and unchanged.

FREIGHTS.—Rates by Grand Trunk Railway:—Flour to all stations from Belleville to Lynn, inclusive, 35c., grain per 100 lbs. 18c.; flour to Brockville and Cornwall, inclusive, 43c. grain 22c. flour to Montreal 50c. grain 25c.; flour to all stations between Island Pond and Portland, inclusive, 85c. grain 43c.; flour to Boston 90c., gold, grain 45c.; flour to Halifax $1.05, grain 53c; flour to St. John 95c. Boxed Meats to Liverpool per gross ton 82s. 6d.; lard or butter in tinnets 87s. 6d.; Pork 11s. per tierce; flour 5s. 6d. per barrel; grain 12s. per 480 pounds. Rates by Great Western Railway—Flour, Toronto to Suspension Bridge 25c. gold; thence to New York, 76c. U.S. currency per bbl.; to Boston 86c.—Rates from Toronto to Liverpool, London and Glasgow are—Beef, Bacon, Pork, Hams, Lard and Tallow, in lots of one car load and upwards, $1.52, gold, per 100 lbs. Grain, in bags of 5 car loads and upwards, 96c., do. Flour, $1.62 per bbl. do.

St. John Market.

BREADSTUFFS.—Jan. 27.—Receipts continue large for the time of year, several schooners having arrived with cargoes from Portland during the week. The demand for flour is exceedingly small, and that is only for small retail lots. It is impossible to place large lots at any price. The markets in Western Canada are again quoted dull, with a downward tendency, which, with large receipts, has weakened our markets, and prices are lower. We quote: No. 1 superfine $5.60; choice brands and strong bakers, $5.75 to $5.80. Cornmeal is easier; we quote $4.40.

Prices of Cotton.

A TABULAR STATEMENT, showing the price of Middling Upland Cotton each week for the years 1868 and 1867, in the Liverpool Cotton Market, will be found interesting and useful for reference:

	1868.	1867.		1868.	1867.

Halifax Market.

BREADSTUFFS—Jan. 26.—We have to report a continued dullness in all descriptions of Breadstuffs during the past week. The demand, which is entirely for Supers, is still small, and only for the better description of Western. We quote:—White Wheat, Extra (Fall) $7.25 to 7.50; Fancy, $6.50 to 6.75; Bakers' Strong, $6.40 to 6.50; Supers, $7.25; No. 2, $5.00 to 5.25; Middlings, $4.50 to 4.75; Pollard's $4.25 to 4.50. Rye, $5.00 to 5.25. Oatmeal, $7.75. Cornmeal, K. D., 34.50; F. G., $4.25. White Beans, $3.25 to 3.50.

PROVISIONS.—Pork exhibits a rather firmer feeling, without buyers; stocks are quite equal to present demand. Beef dull, without change. Butter, Lard and Cheese inactive at former quotations. We quote:—Pork (Mess), $22.50 to 23.00; Prime Mess, $18,00; Prime, $13.50 to 16.00; Bacon Rolls, 13c to 14c; Cut, 12½c; Ham 14c to 15c. Beef (Mess) $10.00 to 12.00; Prin $8.00 to $9.00. Lard, 14c. Butter, 23c to 2 Cheese, 14c.

WEST INDIA PRODUCE.—There have been transactions since our last in Molasses and Suga Quotations, which are nominal, are unchange Several cargoes of Rum have arrived the p week, one lot of which realized 55c at auctio the balance, which was withdrawn, is now h at 60c. Coffee dull and unchanged. We quot Sugar V. P., 9¼c; Porto Rico, 8¼c to 8½c; Cu 7¾c to 8c. Rum, Demerara (in bond), 60c. C fee, Jamaica, 13c to 15c; St. Domingo, 10c to 1 Fish and Oil.—Continue active at full rat Large Shore Codfish in request; also Round H ring. Cod Oil moves off quickly. Stocks now quite reduced. Seal nominal. We quote: Codfish (Large Shore), $4.25 to 4.50; Small, $3. Mackerel, No. 1 L., $16.50; No. 2 L., $14.00 44.50; No. 3 L., $8, to 8.50. Oil—Pale Se 75c; Straw, 75c; Brown, 45c; Cod, 50c to 5 Dog, 35o to 40c. Kerosene—American, 50 Canadian, 40c to 45c.

EXCHANGE.—Bank drafts on London, 60 da 12½ per cent; Montreal Sight, 3¼ per cent; N York Gold, 3 per cent; St. John, N.B., 3 per ce

Petroleum Trade of Pittsburgh.

The petroleum trade of Pittsburgh approxima thirteen millions annually. Sixty-eight refineri some of them monster establishments, are c tinually in operation. The visitor who explo these establishments will find that the grea portion of them possess iron tankage for 100, barrels. Ten thousand barrel tanks are as co mon as barrows. A tank with capacity thirty thousand barrels, and a surface la enough for a skating park, is, however, son thing seldom seen outside of Pittsburgh. Duri the past year, 727,628 barrels of refined oil w shipped to Philadelphia alone. At present th are forty-eight refineries in operation, more less of the time. These refineries have a ca bility to turn out 37,000 barrels per week of fined oil, requiring about 55,000 barrels of cru This, at forty-two gallons to the barrel, wo amount to 80,898,000 gallons refined per ye or within 1,600,000 gallons of the entire amo of refined sent abroad the past year. As it these refineries have the capacity to turn 1,934,000 barrels per year. The capital inves in these refineries, independent of the imme capital all the time locked up in oil, is estima at $7,500,000. The amount invested in the wo and in barrels, tanks, boats and other propert necessary for the prosecution of the busin would swell the aggregate capital to over $2 000,000.

Safes.

The safe of the Royal Canadian Bank in D barats' Building in Ottawa was found in ruins with its contents not much damaged. of Desbarats' safes was found with its cont entirely consumed.

Shipping of Yarmouth, N. S.

The Yarmouth *Herald* publishes a list of shipping belonging to the county of Yarmo at the beginning of the year. It will be seen t the whole number of vessels is 263, and their gregate tonnage 81,896. Although the num of vessels is four less than last year, there is increase of tonnage to the extent of 3,306 t The losses amounted to nine vessels and 2,

ıs, and there were sold out of the county twelve ssels, registering 2,237 tons.

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY, | GUY. R. PHELPS, PRESIDENT,
EDWIN W. BRYANT, ACTUARY, | ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS.

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, throughits entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

THE CANADIAN MONETARY TIMES AND INSURANCE CHRONICLE.

THE Publishers have pleasure in announcing that the success of this JOURNAL has been such as to stimulate their efforts to render it still more valuable to the classes directly and indirectly interested in the subjects with which it deals. As the only Journal in the Dominion which gives particular attention to INSURANCE, it has enlisted the hearty support of Insurance Companies; and while, on the one hand, it contends for the rights of such Companies, it equally recognizes the rights of the public.

The subject of BANKING has become of such importance, as well by reason of past legislation as by reason of anticipated changes in the law respecting circulation, that it is the duty and interest of our business men to make themselves acquainted with the principles which sound Banking rests, and to prevent any action on the part of the Legislature likely to injure the community by lessening the usefulness of our banks. The discussion of this subject in the columns of this JOURNAL has called forth expressions of satisfaction from our most astute financiers, and has done much to give us the position we now occupy in the estimation of the public.

As MINING is in its infancy in this country, a journal devoted solely to the subject could not hope to thrive; but by giving full information regarding Mining operations, and by the employment of reliable correspondents, we have done good service to an important interest, and secured recognition from a class which, otherwise, could not have been reached.

Our purely COMMERCIAL DEPARTMENT has not been neglected, and each week's summary, while concise and pithy, has answered the same ends as a more diffuse elaboration could do, and conveyed to country dealers a complete synopsis of the changes in the Toronto and Montreal Markets.

This combination of interests which the circumstances of the country render necessary, has been of the greatest advantage to each interest by diffusing information among all classes; but, in order to do justice to all, we have been compelled to employ a large staff of writers, and to expend a considerable amount in securing trustworthy correspondents.

While we are thankful to those who have encouraged us thus far, we are anxious to extend still further the usefulness of this Journal, and we call on all who consider that the enterprise is worthy of support, to lend us their assistance in making the MONETARY TIMES a national organ.

On our part we promise impartiality, efficiency, and the best efforts of the ablest writers that can be secured in the Dominion. On the part of our clients, we expect a cordial support and active exertion to widen our sphere of usefulness. In helping us, they help themselves.

Every Merchant, Banker, Capitalist, Insurance Agent, and Broker, can aid us, and we hope that we are not asking too much, in soliciting their assistance.

We shall be happy to receive at any time articles on subjects within our jurisdiction, which, if used, will be liberally paid for.

Subscription Price.....$2 per Annum.

A reasonable discount will be made to Banks, Insurance Companies, &c., which subscribe for their Agencies.

SEND FOR A SPECIMEN COPY.

N.B.—Every subscriber to THE MONETARY TIMES will receive THE REAL ESTATE JOURNAL without further charge.

THE REAL ESTATE JOURNAL.

The objects of this Journal are as follows:—

(1.) To supply to those interested in real estate such information as is of special interest relating to sales or transfers of real property in the principal cities, and throughout Ontario, construction of public works, and building improvements of every kind, increase or decrease of municipal expenditure, debt and taxation, and, in short, whatever tends to influence the real estate market.

(2.) Leading articles will be furnished by competent writers on questions relating to conveyancing, the rise and fall of property, land grants, emigration, and other subjects coming within the legitimate scope of the Journal.

(3.) Lists of lands and houses for sale in every city, town and village of the Province, will appear in its columns, giving buyers the best possible opportunities for selecting desirable properties of any class, and in any locality; and, at the same time, affording sellers a reliable and certain medium for reaching intending purchasers.

(4.) By a circulation extending into every corner of Canada, the announcements of advertisers will be brought to the notice of an immense constituency of readers. A special feature in this connection is, that the Journal will be placed and kept on fyle at all the principal hotels, reading rooms, and other public places in Ontario, and in Montreal. By these means it is confidently believed that every client in the community will be reached.

THE REAL ESTATE JOURNAL is printed fortnightly, on good white paper, in quarto form, and is equal in size and appearance to anything of the kind published on this continent.

Advertising, per line of nonpareil, each insertion, 5 cents. A small discount will be allowed on yearly contracts, for large spaces.

Address, "THE REAL ESTATE JOURNAL," Toronto, Ontario. Cheques should be made payable to J. M. TROUT, who will also issue all receipts for money.

OFFICE, No. 60 CHURCH STREET,

TORONTO, ONTARIO.

PROSPECTUS OF THE
ONTARIO PEAT COMP'Y.

LIMITED LIABILITY. - - - - - - - HEAD OFFICE—TORONTO.

To be Organized under the Act 27 and 28 Victoria, Chapter 23, and the Amendments thereto.

THE property of the company forms a portion of the well-known "Cranberry Marsh," in the Townships of Humberstone and Wainfleet, County Welland, and Province of Ontario, traversed by the Welland Canal, as well as by its "Feeder," which is also navigable; and is composed of following lots, viz. :—

	Acres.
Humberstone—South halves of 28, 30, 32 and 33, Concession IV.	400
Wainfleet—South halves of 6 and 7, Concession IV.	200
" Whole of 10, Concession II, and the whole of 10 and 11, Concession III.	600
" Parts of 8 and 9, Concessions IV. and V., about..	200
Total.	1400

A main ditch six feet deep has been made by the County through the whole of this Marsh for surface drainage, at an expenditure of $50,000; this ditch runs along a portion of every one of the above lots, except two which abut upon the feeder of the Welland Canal.

The several lots above enumerated were the first chosen from the Marsh, having been selected for their great value as Peat Deposits. The remaining Peat lands have been obtained by the Anglo-American Peat Company, which has been operating most successfully during the past season upon a lot adjoining one of the Company's lots. A most satisfactory report has been obtained from Frederick Holmes, Esq., the County Engineer, a gentleman who has had large experience in these peat lands, having not only surveyed and laid off the Marsh into lots for the County, but has also been employed as superintendent in the ditching operations which have been undertaken and carried out through the whole extent of the Marsh. His estimate of the quantity of Peat contained in the Company's lands is placed at three millions of tons, at the very least; and this estimate is fully borne out by the eminent firm of Messrs. Macdougall and Skae, Civil Engineers, Toronto, who were specially despatched to make a personal examination of the property, and whose report is subjoined.

Peat can be laid down on the banks of the canal at the cost of from $1 to $1.25 per ton, and can from thence be forwarded by water to market in all directions, at small cost, and without transhipment; to say nothing of the facilities and advantages afforded by no less than five railways, one of which, the "Buffalo and Lake Huron," passes within twenty chains of the property. In addition to these advantages, the fact may be noticed, that about thirty vessels pass through the canal every day during the season of navigation, the steamers requiring fuel for their own use, and the sailing vessels seeking cargoes, and requiring ballast westward to Chicago and other points.

The demand for this fuel for private consumption will be very great when its superior qualities become more widely known. Already railways and steamers are beginning to use it instead of wood and coal, with the most satisfactory results, experience having proved that one ton of peat is equal to about one and one-third cords of the best hard wood. With a view to the full and proper development of this property, it is proposed to organize the Company with a capital of $120,000, in 2,400 shares of $50 each; $50,000 of this sum to be retained by the Directors for working capital, the balance to be applied to the purchase of the real estate. It is also proposed that 25 per cent shall be paid at the time of subscription, and the balance in calls of 10 per cent at such times as the Directors may name, but not oftener than once in every three months, from 1st of January, 1869.

The affairs of the Company will be managed by a Board of five Directors, the first set to be provisional, and, as soon as the charter is obtained and the Company organized, the permanent Directors to be chosen by the Shareholders, and to be elected annually.

The principal office of the Company to be in the City of Toronto. The property has been conveyed to Peleg Howland, Esquire, who will hold the same in trust until the Company is organized

PROVISIONAL DIRECTORS.

HENRY S. HOWLAND, Esquire, Toronto. JOHN FISKEN, Esquire, Toronto. LARRATT W. SMITH, Esquire, Toronto.
ALFRED TODD, Esquire, Ottawa. EDWARD A. C. PEW, Esquire, Welland.

Further information can be obtained at the office of

C. J. CAMPBELL, Esq., Banker, 92 King Street East, Toronto,

Who will act as Provisional Treasurer, and will also receive subscriptions for Stock.

CHAMBERS, 17 TORONTO STREET, TORONTO, JANUARY 11, 1869.

To the Directors of the Ontario Peat Company,—

GENTLEMEN,—We have the honor to lay before you the following report, on the Peat Beds in the Great Cranberry Marsh, situated in the County of Welland. The swamp, or to call it by a more proper name, moor, for it is more like the moors of Scotland than the swamps of this country, is intersected by a large drain, which at present carries off a considerable quantity of water; and from its juxta position, to the lots owned by your company could be made available for drainage purposes. The moor rises gradually from its northern limit in concession 4, to its summit, at the south end of concession 3, about four feet on two and a half miles, where it is about eight feet above the level of Lake Erie; while, on the north, from the end of the moor to the Welland River, distant about a mile and a half, there is a fall of sixteen feet. Following the course of the water through the various drains, the result arrived at is, that the moor is higher than the surrounding country, which is under cultivation.

The peat on this marsh, brought up by the boring rods, as well as that lying on the sides of the drains, thrown up when they were made, shows a good quality of a dark black color, in every lot. There is a layer of red peat in some of the lots of the Township of Humberstone; but generally the peat was of the dark colour above mentioned. The surface of the marsh, or moor, has been burnt once or twice, so that there is not much moss or new growth, nor are there many trees alive; and on the lots owned by your company this is more marked. The lots are conveniently placed for work and connections could be formed, at a small cost, to the several outlets that surround this tract of land; and the surface being regular, no difficulty would be encountered in laying tramroads.

In making the borings for this report, the valuable assistance of the County Engineer, Mr. Frederick Holmes, was obtained, as he had superintended the making of the drains, and had laid out several of the lots some years ago, and since that time had been intimately acquainted with the moor. The depths arrived at give an average of six to eight feet of peat over all the lots in the 3rd and 4th concessions, while in the lot of the 2nd concession of the Township of Wainfleet, the peat is very deep, averaging about 15 feet, and it is said to go even deeper. There are 200 acres in this lot.

The regularity of the upper surface of this large tract of land, both peat and arable, being combined with the result of the borings taken, tend to the conclusion that the bottom of the peat bed must also be regular, as there are no hills or mounds of any size or consequence in the vicinity.

The Anglo-American Peat Fuel Company have been at work during last summer on a portion of this marsh, opposite to some of the lots owned by your Company. They find the loss, by weight and shrinkage to be 75 per cent.; or to make one ton of peat fuel, four tons of peat are required. This is less than that of a similar project in the Lower Province, where the shrinkage is 85 per cent.

From the data and experience of the Anglo-American Company, taking the loss by weight and shrinkage at 75 per cent., with an average of six to eight feet over all the lots, but that in the 5th Concession of Wainfleet, which is taken at sixteen feet, we find the property of your Company situated in the marsh, to be capable of producing over 3,000,000 tons of fuel.

A fuller report, by us, lies in the hands of Mr. C. J. Campbell, Banker, King Street, Toronto, to which also we beg to call your attention.

We have the honour to be, gentlemen, your obedient servants,

MACDOUGALL & SKAE.

Meetings.

CANADA PERMANENT BUILDING AND SAVINGS SOCIETY.

The fourteenth annual meeting of the Canada Permanent Building and Savings Society was held at the Society's offices, Masonic Hall, Toronto, on Wednesday, Feb. 10th.

The President, Joseph D. Ridout, Esq., upon taking the chair, said that he had only to repeat what it had been his pleasant duty to say upon every preceding occasion of the kind—that the affairs of the Society were in a very flourishing condition. Hitherto, in referring to the Society, he had refrained from speaking strongly about the great success which had attended it, because he was unwilling unduly to emphasize a state of things which might possibly appear less favorable at some subsequent period; but now that the Society had been working for fourteen years, with continually increasing prosperity and credit; that a good dividend had been distributed each half-year; that a reserve fund had been created, which pretty nearly assured their ability to do so through all time to come; that the Society had been placed at the very highest point in public estimation, and that, altogether, more had been accomplished than any experienced and reasonable person would have ventured to predict, he felt warranted in speaking of it in the strongest terms which he could find, not only and merely as a success, but as a great, brilliant, and triumphant success. He considered it proper to add in acknowledgment to those who have been mainly instrumental in achieving this success; that it was the result of extreme care, good judgment, great labour, fidelity and solicitude on the part of the directors, the executive, the solicitor, and every member of the staff in every department of the institution. Some seasonable modifications in the practice of business, to meet the varying condition and circumstances of the country generally, had been made, under the recommendation of their always watchful and active Secretary and Treasurer, by which the Society had been popularized throughout the length and breadth of the Province.

In performing his duty of introducing the gentlemen present to the business of the day upon such occasions, he considered a few comprehensive observations would be sufficient for him to address to them (the shareholders), as the whole story of the Society's position had been particularly narrated in its several reports; and he would, therefore, submit the Directors report for the year, and hesitated not to say that a more interesting or satisfactory one had never been read before any society which had ever been established in the Province.

CANADA PERMANENT BUILDING AND SAVINGS SOCIETY.

REPORT OF THE DIRECTORS FOR 1868.

Following the recognised usage of this and other corporate institutions, in presenting to the shareholders the audited statements of the transactions of the past year, and of the present position of the institution, the Directors desire to refer briefly to the more prominent facts developed by the business of the year. This task is, on the present occasion, made a very agreeable one by the circumstance that not only have the expectations which the previous history of the society warranted, been fulfilled, but that all the most gratifying features of the preceding year's report have been remarkably improved upon.

The Directors note with satisfaction the generally prosperous condition of the agricultural interests of the Province, as indicated by the enhanced value of farming land, the greater frequency of loans being required to assist in purchasing, and in making improvements thereon, and in the general punctuality with which their annual instalments of principal and interest have been paid by this class of borrowers. And in this connection it may be observed, as a matter for congratulation, that with an aggregate of more than three thousand loans now upon the Society's books, so few cases have occurred during the year in which the aid of the Society's solicitor has been required to enforce compliance with obligations on the part of mortgagors, thus affording the best evidence of the care exercised in the past in making investments, and of the desire of the Society's customers to maintain their credit with the institution.

The cash receipts for the year closely approach one million of dollars. The whole of this large sum was readily disposed of in fulfilling applications for loans, and in meeting current requirements. The demand for the Society's funds upon ample securities has been most active, and during the past few months has taxed to the utmost the ordinary resources of the Society to supply. The number of loans made was 824, amounting to $592,000, as compared with 585, amounting to $481,000 in the previous year.

The capital of the Society is now nearly all paid up, and before another annual meeting the whole of the remaining accumulating shares will have matured, thus placing all the shares of investing members upon the same footing.

After providing for the payment of the half-yearly dividend of five per cent. each upon the capital stock, and for an enlargement of the contingent fund proportioned to the increased amount of the Society's securities, the profits made have allowed of the allotment of eleven per cent. per annum to the accumulating shares, and of an addition of one per cent. upon the capital stock to the reserve fund, which now amounts to the important sum of $100,264. The policy of setting aside a portion of the realised profits for the purpose of establishing a well guarded reserve fund, which this Society several years ago adopted, has received general and unqualified approval, as is shown in the unprecedented price that is paid for its stock when offered for sale.

As in the preceding year, the Savings Bank branch exhibits an increase of one-third upon the whole amount previously held, and the number of accounts open with depositors has increased from 965 to 1,055.

In conclusion, the Directors have only to express the hope that the high degree of prosperity which has hitherto distinguished this institution may characterise its future progress.

All which is respectfully submitted,

JOSEPH D. RIDOUT, President.
J. HERBERT MASON, Secretary and Treasurer.

FINANCIAL STATEMENT.

RECEIPTS.

Balance 1st January, 1868	$ 57,039	29

J. Herbert Mason,
Secretary and Treasurer.

We, the undersigned, have respectfully to report the completion of our audit for the year ending 31st December, 1868, and have much pleasure in certifying to the correctness of the above statement. We cannot close our report without congratulating the stockholders on the satisfactory manner in which the duties of the office are carried on by your energetic Secretary and Treasurer and the other officers in the establishment.

W. B. Phippe, Henry Pellatt,
Auditors.

Toronto, Feb. 8, 1869.

The four retiring Directors, Messrs. Joseph D. Ridout, Peter Paterson, Samuel Nordheimer, and Joseph Robinson were unanimously re-elected.

Port Hope, Lindsay and Beaverton Railroad Board.—At the annual meeting of the bond and stockholders of the Port Hope, Lindsay and Beaverton Railroad, held on the 19th inst., the following gentlemen were elected officers for the current year: President, Henry Covert, Esq.; Vice President, William Cluxton; Solicitors, Hon. Sidney Smith, Lewis Moffatt, D'Arcy Boulton; General Superintendent, A. T. Williams; Secretary and Treasurer, Joseph Gray.

The following resolutions were unanimously passed at the meeting: Moved by H. Covert, seconded by D'Arcy E. Boulton—*Resolved*, That the stockholders have heard with great satisfaction the report of A. T. Williams, Esq., General Superintendent, and they feel it would not be doing justice to that excellent officer, and the others associated with him in the management of the road and its affairs, if they did not acknowledge by resolution their gratitude for the efforts put forth, and the eminently satisfactory results which have followed. The stockholders also take this opportunity of conveying to the Secretary their grateful acknowledgements for the manner in which he has discharged the duties appertaining to his office, and for the clear and satisfactory manner in which the accounts and statements have always been submitted.

Moved by D. E. Boulton, seconded by the Hon. Sidney Smith—*Resolved*, That the thanks of this meeting be conveyed to the Auditor, John Smart, Esq., for his clear and satisfactory report.

Coburg Gas Works.—At the annual meeting of shareholders on Monday evening last, the following gentlemen were elected directors for the ensuing year: A. Fraser, Esq., M. P. P., Dr. Beatty, A. Hewson, Esq., W. H. Weller, Esq., and W. H. Floyd, Esq.

Insurance.

INSURANCE MATTERS IN NEW YORK.

(From our own Correspondent.)

New York, February 4th, 1868.

To the Editor of the Monetary Times.

The present month—indeed the past fortnight—has been remarkable for the mildest weather remembered in this city by the "oldest inhabitant." This fact is, under the present social and business *status*, a most merciful dispensation. It cannot be denied that the present season is one of real suffering among the poor of this city. While the number of them increases from obvious causes, their source of life—viz., labor, diminishes. A larger number of the mechanic and laboring classes are out of employment, and, with many others, wages are at starvation prices. This fact explains the strikes among printers, bricklayers, tailors, and other trades, now disturbing the cities industries. It also explains, in part, the extraordinary flood of crime which has come upon us. The feeling of law-abiding citizens has been roused to the highest pitch, and even the suggestion of a vigilance committee, openly and repeatedly made. The two extremes of society seem for the nonce to have met on a common criminal platform; and Wall street swindlers are as unblushing, if not as dangerous to life, as the side street burglars. The press deplores the low moral tone prevailing—insecurity to person and property, and the inefficiency of the police; but it is not easy to suggest a remedy. This is not a cheerful picture of metropolis, but it is too true, nevertheless.

The present financial aspect is decidedly "[illegible] Governments maintain themselves, and the [illegible] demand, even improves. R. R. Stocks are [illegible] active; money is active for speculative purposes, but the general commercial condition is one exceeding dullness. The sensation of the hour the expulsion of Erie from the stock board. The stock has sunk so low that it can only be had on the curb-stone—a great corporation ruined by stock gambling.

Upon the usually quiet surface of the insurance world we scarcely discern a ruffle—yet the under current is sometimes strong. The reports of life companies are not due at the Insurance Department until first March, and any speculation as to the probable character of them would be useless. The writer has interrogated officers of several prominent life companies, and they have generally assured him that their companies' returns for the year would shew an improvement over 1867. We can only hope that such will prove to be the case; but the writer is apprehensive that much of the new business, especially among new companies, will be found to have cost more than it is worth.

In the competition which grows out of the claims of the "mutual" "mixed" and "stock" companies, those which believe they have liberal liberal charters not only trumpet their claims, but, in various ways, seek to disparage their rivals. Some time since Mr. Joseph B. Ecclesine, of the *Underwriter*, conceived the commendable idea of publishing a chart which should give a *coup d'œil* view of the principle features in the charters of each company. The stockholders, of the Knickerbocker, were represented as entitled to the 90 per cent. of the profits, besides an interest dividend on the capital. Such a statement of a company no good, just now, when the mutual plan is, undoubtedly, in most favor with the public. President Lyman, of the Knickerbocker made haste to deny the correctness of Mr. Ecclesine's chart in the *Post*—a long controversy followed, the result being that Mr. Ecclesine has just been arrested on complaint of the Knickerbocker for libel—gave the usual bail—and on the trial we shall, doubtless, have some sharp thrusts designed to shew up, or down, the merits of the or that "plan."

One of our most respectable literary weeklies—the *Nation*—not long since showed its ignorance of life insurance by declaring that the experience of all the life companies were rapidly destroying their reserve. More recently another of them—the *Round Table*—devoted a slurring column to the abuse of the offices generally; while the New York *Herald* has insinuated, during the past week, its doubts as to the ability of our life companies to pay claims due in the future. The record of undeniable good done by the system so far, and the confidence reposed in it by more than half a million insurants, must remain, for the present, conclusive vindication.

This year Superintendent Barnes has changed his rule with the press—none of its representatives being admitted to his department; but the annual return of the fire offices, or a considerable number of them, are all in, abstracts will be mailed, simultaneously, to the different papers. It will, probably, be got about first March. There are, even at this late day, several offices which have not made returns—of course a large body, including, particularly, stockholders and insurance brokers, are anxious to see the abstracts. Upon the dividend returns for January, a half dozen New York offices have shown an improvement over corresponding month in January, 1867. Yet while annual statements to the Insurance Department will generally be satisfactory, for some unaccountable reason the insurance stocks are much depressed. Whether it be owing

oney market, or the fact that knowing ones prefer hold off till official statements can be examined, is deponent saith not.

Among the prevailing dissensions in the insurance camp, and which have just been renewed ith considerable spirit, is the question of the erits, and demerits, of the New York State Restry System, and the *demerits* of the co-operative an of life insurance, so-called. A pamphlet, of markable ability, has recently appeared against e Registry System, and has been widely circuted. The "plan" was originally devised by esident Morgan, of the North American life.— is decidedly a combattive, as well as able officer d writer, and will not be likely to let the pamlet go unnoticed. The law provides that any e company, where the insured desires it, may ace on deposit, with the superintendent, a cash posit equal to the present net value of the poy, and the superintendent issues a handsomely graved certificate to that effect. It is contended the four companies that have adopted the prace of issuing registered policies, that because the perintendent is made the custodian or trustee of e policies' reserve that, therefore, the *policy* is ured by State endorsement, while *per contra* opponents insist that the law is no security *for* policy; that for it, as such, or its payment, ere is no security, whatever. The security is so much reserve as may have been deposited, be paid over to the company only; and this, er the risk has been finally adjusted, or upon cial order of its officers or receivers.

A series of articles, some of an actuarial and hnical, others of a general character, which e appeared in the Insurance *Monitor*, during t past two months, discussing and dissecting the operative system of life insurance, have retly been published in pamphlet form, under t auspices of the regular life companies. But acking this scheme, is like hitting a man when is down. It is substantially dead. Of the e companies orgauized in this city, the first— t Manhattan co-operative, is the only one that 'ot into business," even to a limited extent.— E the speciousness and utter impracticability of th scheme, considered on any actuarial basis, was s made manifest by the insurance and daily ps. The getters up of these affairs have only sight to operate among the mechanic and laborin classes, but have not succeeded in damaging th largely. If the business classes did not see th humbug on its merits, the inconsequential character of the "promoters" would be a sufficient guarantee that the thing was a delusion and a sre.

he painful event of the past week, in insurance cles, was the death, in this city, of T. Jones, jr. under, and for nearly sixteen years proprietor of he Insurance *Monitor*, the first strictly and exclusively insurance journal, of note, established n he United States. When the *Monitor* was sted the insurance laws of this State were in an perfect shape, and there was the largest liberty for starting companies, with mere paper capitals. Soon thereafter, however, the law of 1853, which required annual returns, was passed, and order began to emerge from chaos. Of the present 98 New York fire offices, 56 then; and of the 44 life companies, now organized or represented in this State, only 15 then existed.

FIRE RECORD.—Scarboro Township, Ont., Jan. 28.—The barns, stables and outbuildings, with contents, consisting of grain, hay, implements, straw, and several sheep, the property of William Bonet, were totally consumed by fire. The origin of the fire is unknown, The loss is estimated at $1,600. The buildings were insured to the amount of $600.

Durham Village, Ont., Feb. 1.—The workshop of Matthews, carpenter, adjoining the dwelling house, took fire at the roof, owing to a stovepipe which passed through it, and in an incredibly short time the building containing Matthews' tools, turning lathe, etc., was consumed. The dwelling house caught fire from the burning shop, but the neighbors assembled and by their prompt exertions rescued most of the furniture, together with the doors and windows of the house.

Burford, Ont., Jan. 29.—A fire broke out in the barn and shed of J. W, Grove's hotel in Burford Village. The barn and sheds were consumed; in the barn was a lot of hay, corn, oats, etc., which were also burned. The stable was full of horses, but owing to the presence of mind of those present they were all saved except two; a few pigs and a dog also perished. The origin of the fire is yet unknown, but it is supposed that it caught fire from a pipe which was being smoked by some of the party, who went to the barn to get their horses ready to go home. The furniture in the house suffered some damage by removal, on which there is no insurance. The house and barn are insured in the Niagara District Mutual Insurance Company for $600; total loss, barn, horses, pigs, etc., about $700.

Millbrook, Ont., Jan. 29.—A fire broke out in the residence of Alfred Henderson. The inmates barely escaped; they lost most of their clothing, all of their provisions, and had their furniture badly damaged. No particulars as to insurance.

Douglass, Ont., Feb. 2.—Boot and shoe shop of Alex. Todd and stock of boots and shoes, leather, etc.; loss $2,000; insured for $1,000.

Windsor, Feb. 4.—A fire broke out in a frame house on Mercer street, owned by Mrs. Thomas, and was burned to the ground. It was unoccupied at the time, and was the work of an incendiary; insured for $400.

Ramsay Township, Ont., Feb. 3.—The dwelling house of Peter Lake, farmer, on the Sixth concession, was totally destroyed by fire, with a portion of the contents. No insurance.

St. Catherines, Feb. 6.—A tank of oil at H. F. Leavenworth's oil refinery suddenly caught fire and burnt the oil in it, consisting of several barrels, and a shed in which the tank was situated. The refinery itself was in considerable danger, but the men working at the new bridge at lock No. 2 rushed up in time to save it by throwing mud on the flames.

Kitley Township, Ont., Feb. 4.—Premises of John Forgie, Kitley; loss estimated at $1,800. The fire originated from a lantern which had been carelessly left hanging in the cow house. There is no insurance.

Dundas, Feb. 6.—Residence of Jas. Coleman, known as Ogilvie Terrace; most of the furniture was saved in a damaged condition. Mr. Coleman's loss is covered by insurance to the amount of $10,000, as follows: $5,000 in the Canada Farmers' Mutual, of Hamilton; $6,000 in two policies in the Waterloo County Mutual; of this $1,000 was on the stables, which were not destroyed. The loss above insurance is estimated at from $12,000 to $15,000. The fire is supposed to have originated from some defect in the furnace.

Listowel, Ont., Feb. 1.—The workshop of Robinson & Jackson was destroyed by fire. Loss $1,000; insured for $500. The origin of the fire is unknown.

Egremont Township, County Grey, Jan. —.—Barn of James Taylor; loss $500; no insurance; cause incendiarism.

Pakenham, Ont., Feb. 3.—Carpenter shop of John Riddell, with contents; insured in the Provincial for a small amount.

Bowmanville, Feb. 1.—House of Mrs. E. Clifford and contents, on Clinton street, totally destroyed. No particulars.

St. Catherines, Jan. 29.—A St. Catherines paper says that a house was set on fire by mice in that town. After the fire had been extinguished, a scrutiny showed that some mice had build several nests close to the stovepipe, and that the straw and other combustible material of which these nests were constructed had ignited, and that from these the woodwork had caught fire.

Elizabethtown Township, Jan. 28.—A barn and contents, belonging to Mr. Burns were totally destroyed; insured in the Agricultural Mutual; cause unknown.

Montreal, Feb. 9.—The establishment of Mr. Kennedy, a saloon-keeper in Notre Dame street, was gutted on Sunday night. The loss was about $1,200. He was fully insured.

CHANGES.—Capt. Frank Jackman has been appointed to the Marine Inspectorship of the Montreal Assurance Company, vice Capt. Taylor who assumes a local position in connection with the Toronto Branch.

Mr. W. H. Miller has been appointed Toronto agent of the Northern Assurance Company, in the place of —— Manning, resigned.

— The British America and the Western of Canada have paid to the Minister of Finance their second instalments under the Insurance Act.

— The Royal, Lancashire, and London and Lancashire agencies have been withdrawn from Ottawa.

—Mr. Thos. Hood and Mr. Whitlaw have plunged into a newspaper squabble in the Guelph papers, over the affairs sf the Township of Guelph Mutual Insurance Company. It is charged that that fruitful source of fires, over-insurance, is practised in a number of instances. Query—How often is over-insurance effected, when it is *known* that in case of loss the company would not have to pay anything like the full amount of the policy?

THE CRIME OF FALSE PRETENCE IN LIFE INSURANCE.

Is it not time to arrest the further progress of false pretence in life insurance?

Does not the existing competition for business threaten seriously to involve some, not to say many, of the life companies, in errors of practice, as to expense and expectation, from which, there will be, there can be, neither reform nor recovery?

Are any of the companies indulging too large expectations in respect of their future business.

Are any of the companies making promises which they will not, in the future, be able to fulfil?

If life insurance is an exact science, if its theories of practice are based upon the knowledge of certain immutable principles, and if a scientific application of those principles determines exactly what can be done for the heirs of a man who deposits during his life time certain amounts of money, at stated intervals, any resort to false pretence in getting that man to deposit his money is unnecessary and inexcusable. More than that, it is deliberate and cruel fraud. If any company, knowing, as it may, exactly what it can, or cannot, afford to undertake, promises more than the legitimate and possible benefits of a life insurance, then it is guilty of an offence little short of rank and violent robbery. If it perverts, or exaggerates, or misrepresents the real function and object of a life insurance policy, then—we may as well confess it—the effect of the transactiou is to make life insurance a means of selfish and personal emolument, or advancement, the material of speculation being the "sacred funds of the widows and orphans."

It may not be well to call hard names, but we cannot close our eyes to the imminent peril which now threatens the practice of life insurance in this country, on account of five years of unchecked and appalling falsehood on the subject of life insurance dividends. The seed has been faithfully sowed. In due time will come the harvest, and the profits of that harvest will be hundreds of thousands of dollars paid on policies, thrown up in disgust and anger by disappointed and deceived policyholders. It is possible that the true reason why agents have been permitted, in many cases encouraged, to get business through the medium of false pretences, is found in the confiscation of the moneys previously borrowed on lapsed poli-

cies? One company reports having distributed in a period of twenty years six hundred and forty thousand dollars of forfeited policies: or, in other words, having confiscated six hundred and forty thousand dollars on forfeited dividends.

Another, and by far the commonest, as well as the most wicked species of false pretence, which is bringing the business into disrepute, is the shameless practice of impressing the public with the idea that a premium note serves, in some mysterious way, to relieve the assured of half the cost of his insurance. We know a great many conscientious agents who habitually explain, in every case, the precise function, as they understand it, of the premium note; but the number of these is very small, when compared with those who, either willfully, thoughtlessly, or ignorantly, cause it to be believed, in the great majority of cases, that a man can buy a given amount of insurance on the premium note plan at half the price the same amount of insurance would cost on the all cash plan. Nor is this all. The fact is almost universally kept in the back ground that every premium note becomes, immediately on its payment, a part of the company's assets and as such must yield interest annually, which is certain to become a considerable item in the course of a few years when the policyholder begins to pay interest on the total amount of two, three, or four premium notes. The policyholder learns then that the premium, which he supposed, at the outset, was fixed and unalterable, has become materially increased. If the dissatisfaction consequent to the discovery results in a determination to surrender his policy, he learns, then, what also is contrary to what was his original understanding, that the non-forfeiture provision is available only to the extent that he has paid cash. In some cases the much vaunted paid-up policy, afforded by the non-forfeiture provision, is made subject to the outstanding notes which the policyholder has given, upon which interest must be paid annually in advance. In other cases, paid-up policies are issued for an insurance equal to the amount of cash which the policyholder has paid. Other companies more liberal in their dealings, comply strictly, from necessity or choice, with the provisions of the Massachusetts non-forfeiture law, which is a vast improvement upon the practice formerly pursued, but, nevertheless, still very much short of the demands of exact justice. In every case, however, the expectations of policyholders in regard to dividends, to premium notes, and to the forfeiture of their policies, are rarely realized. Whether this is the fault of the public, or whether it is the fault of companies, or whether it is the fault of agents, the prospects of a diminished patronage of the life companies generally demands that the fault shall be corrected. If the public estimation of the advantages of life insurance has suffered from false pretences, a competition ten times as vigorous as the existing competition will not serve to repair the damages thereof. It is only the correction of abuses, the conformity of practice to principles of strict justice, and an honorable and prompt compliance with the terms of a contract so expressed that a misapprehension or evasion of its provisions shall be impossible, that can arrest this departure from the ranks. Therefore we cry halt, Messrs. Officers, Managers, Directors, Agents, and Solicitors; put your terms clearly before the public; write explicit contracts; and, thus, overthrow the discredit, disrepute, demoralization, and disaster, which, under the banner of False Pretence, threaten to-day the ruin of a majority of all the life companies.—*Condensed from Chicago Spectator.*

THE CANADA LIFE.—This company is determined not to be driven out of the field by adversaries, either American or British. The conflict between the many Life Companies now doing business in Canada is decidedly irrepressible, and, as it sways to and fro, some pretty hard knocks are given and taken. Mr. Ramsay has come in for his share, as well as the rest, but holds his own with praiseworthy persistency. He gives the following comparative statement of assets for each $100 assured :—

	Assets for each $100 Assured.	
Travelers	$2.94	
Atlantic Mutual	6.19	More than 1-10th is in Notes.
Equitable	6.21	
Phœnix Mutual	7.65	Nearly one-half is in Notes.
Etna Life	8.20	More than one-half is in Notes
Connecticut Mutual	11.52	Nearly one-half is in Notes.
Union Mutual	12.61	Nearly one-half is in Notes.
New York Life	13.19	One-sixth is in Notes.
Average of above	8.44	More than a-third is in Notes.
" Canada Life	18.70	

To show that the rates for assurance in the Canada Life are lower than in the various American offices transacting business in Canada, Mr. Ramsay gives the following table of rates, by 10 annual instalments for assurances of $1000, with profits in each of the Companies named:—

Age.	CANADA.	Ætna.	Atlantic Mutual.	Connecticut Mutual.	Equitable of New York.
25	$36 20	$44 78	$45 24	$45 82	$42 56

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

The business of the week has been large; a good demand for securities still continues, and prices in most cases have advanced.

Bank Stock—Montreal has been firm and in good demand during the week, with very little offering; last sales were at 139¾. British has been sold at 104; sellers now ask 105. There were large sales of Ontario at 100¼ and 100½; at the close there were buyers at 100 and sellers at 100½. Though prices offered for Toronto have induced sellers to come forward; considerable sales were made at 121½ and 122, and a small sale at 123; the week closed with sellers at 122½. There is a steady demand for Royal Canadian; buyers offer for very little offering. Sales of Commerce occurred at 102¾, which was the asking rate at the close. Buyers have advanced their offers for Ontario to 42, but there are few sellers under 45. Merchants' remain steady at 109 to 109½; there are sellers at the latter rate. No Quebec in the market; buyers would give par. For Molson's 110 is bid, but there are no sellers. There were sales of City at 102¼ and 102½, closing in fair demand. No sellers of Du Peuple; buyers at 109. For Metropole 106½ is offered. There is a fair demand for Jacques Cartier at 107½; no sellers under 108½. Bank of Union occurred at 103½. Other banks nominal.

Debentures—Canada are in active demand. Sterling Fives have been sold at 95½, Currency Fives at 106, and Dominion stock at 105½; there are few sterling six per cents in market. Toronto are very scarce; no transactions. County are also scarce and much enquired for.

Sundries—Canada Permanent Building Society active demand; sales were made at 124, 124½, and 125. Some sales of Western Canada Building Society occurred at 118½ and 119; there are now buyers at the latter rate. Buyers offer 109½ for Freehold; there were sellers at 110½, Montreal Telegraph is held at 134, with buyers at 132½. Small sales of Landed Credit occurred at 75, but buyers generally offer only 73. British-America Assurance is held at 55½, with no buyers over 54½. Moatgages are readily negotiable at 8 per cent. Money is easy on first class paper.

THE CITIZENS' INSURANCE COMPANY
(OF CANADA.)

AUTHORIZED CAPITAL.....$2,000,000
SUBSCRIBED CAPITAL..... 1,000,000

THURSDAY, FEBRUARY 11, 1869.

CANADA PERMANENT BUILDING SOCIETY.

The prosperous business done by the Canada Permanent Building and Savings Society, the largest institution of the kind in the Dominion, with its $1,039,050 of capital, and $567,187 of deposits, shows how well it adapts itself to the wants of the country and how highly valued are the advantages it offers to borrowers. Some years ago a great deal of prejudice existed against Building Societies on account of the exorbitant rates charged and the heavy fines exacted from borrowers. This prejudice has subsided, for we find well organized Building Societies, such as the Canada, are able to keep out their funds notwithstanding the competition that exists in supplying the demand for money. That they are able to find investments for their capital and deposits and pay handsome dividends without any losses of consequence, must be taken as evidence of their being well suited to the wants of the country. The Canada Permanent, under the skilful management of the Secretary, Mr. J. Herbert Mason, who may be regarded as our highest authority in Building Society matters, has progressed with rapid strides until its pro portions have attained those of a Bank. Last year its cash receipts were almost a million of dollars. In 1867, they were $800,000. The mortgage asset has increased from $1,543,000 to $1,818,000. Notwithstanding the opening of the Post Office Savings' Bank, the deposits exceeded by $140,000 those of the previous year. The directors tell us that "the demand for the Society's funds has been most active and during the past few months has taxed to the utmost the ordinary resources of the Society." After paying the usual half yearly dividends of five per cent. upon the capital stock, provision was made for the enlargement of the Contingent Fund to $50,000, for the allotment of 11 per cent. to the accumulating shares, and the increase of the Reserve Fund to $100,264. One feature in the report possesses peculiar interest for the general public and that is the acknowledged punctuality with which borrowers have paid up principal and interest. It shows that the country is in a healthy condition when such a statement is made by a Society whose operations extend in all directions throughout the Province.

SELF INSURANCE.

This journal has more than once pointed out the defects of the forfeiture plan of life insurance still adhered to by many companies. A man, in nine cases out of ten, is the best judge of his own interests. It must often happen that it would be much more advantageous to discontinue the payment of future premiums on a policy, than to go on paying till death, as where those for whose benefit the insurance was effected have died, or where the insured suffers pecuniary losses, and is consequently disabled from keeping up the policy. Again, in these days of emigration, men are frequently obliged to take up their residence permanently in another country, not included in the limits prescribed in the policy. In such cases to compel the keeping up of the policy, or in default the forfeiture of all interest in it, is a great hardship. The dread of this no doubt operates very disadvantageously in preventing life insurance growing more rapidly than it does even now.

In view of these things it is matter for congratulation that there has recently been introduced, in England, a system which promises to remedy such defects. The author of the scheme is Dr. Farr, well known for his English life tables. Its general features are that the insured has the privilege, on deposit of the policy at any time after payment of even only one premium, of drawing out, either as a loan or as a surrender-policy, nearly one half of the total premiums paid. On the back of the policy when given there is endorsed a table shewing the surrender value, and a table has also been prepared by Dr. Farr and published, shewing what will be the value of any policy

after each premium is paid. The policy, therefore, becomes to all intents and purposes a negotiable instrument for its current value. If an insurer is overtaken by reverses, after his policy has been many years in existence, he can on depositing it get the endorsed surrender value in cash or a paid up policy for the amount. Again, where it is stipulated that the insured shall not go beyond certain geographical limits, in ordinary cases the breach of this would cause a forfeiture of the policy; under the new system the policy would stand for its surrender value, which could be got by the insured at any time, or by his representatives after his death. In a former number of this journal, vol. i, p. 202 (Jan. 30, 1868), we recommended the adoption of a plan almost exactly similar to that now described, viz: the payment of a certain sum or the giving a paid up policy, in the event of an insured wishing to discontinue the policy; the only difference being that we there contended that the choice out of the two methods indicated should be given to the company and not to the insured, for the reason there given, "in order to prevent the insured from purposely neglecting to pay his premiums, with a view of getting his policy cancelled." Upon consideration, however, we incline to think that it may be preferable to give the option to the assured for the reason mentioned at the beginning of this article, that, as a general rule, a man is the best judge of his own interests. The new system is very advantageously embodied in policies payable on attaining a certain age, or at death if that take place sooner. It is this combination which peculiarly merits the appellation of self-insurance, uniting as it does the advantages of life insurance with those of a savings' bank, in which to accumulate a sufficiency to keep one in old age, when work becomes difficult or distasteful. The plan has now been tried for a year by a company in England, with a success so marked as to promise to open a new era in life insurance. In this country the non-forfeiture plan has been adopted more generally than in England, nevertheless the new system appears to combine so many advantages as to make it well worth a trial here, and we shall watch with interest the result of any experiments which companies may make in regard to it.

HURON AND ONTARIO SHIP CANAL.

Though it be to a great extent true that the present, as it has been said to be, is the age of political economy, yet it is unfortunately equally true that there is among men, including those from whom we should expect better things, so much loose and chaotic thinking upon the subject, that it can scarcely be said that the science as now taught by its great masters is understood by more than a small minority. One of the irrational dogmas which, in common with many others equally absurd, Adam Smith found in universal acceptance in his time, and which he and his immediate successors succeeded in destroying, was that known as "The Mercantile System." The idea of which that phrase was the expression, was that wealth consisted only of money (gold, silver, etc.); that the only way in which a country could become wealthy was by hoarding up within it, as much of that commodity as its people could lay their hands upon, and that the departure of it was a sure sign of impoverishment and impending ruin. Had Adam Smith done nothing more than destroy this superstition he would have deserved the thanks of posterity to the end of time. It is well worthy of notice, however, that, though this idea got its death blow about a century ago it still infects the popular ideas upon many subjects, lurking unsuspected beneath some fallacy as the root from which it springs; the nonsense which newspapers are even yet continually writing about the "balance of trade" may be adduced as evidence of this.

Another of these fallacies is that which seems to be held by the promoters of the scheme we are considering, viz., that money brought into a country and expended in public works, etc., increases the wealth of that country to the extent of the amount so brought in, and is a permanent addition to its capital. Listen to the Coryphens of the scheme. In a letter which appeared in the *Leader* of the 11th ult., he says: "The construction of the Huron and Ontario Ship Canal, enlarging and utilizing the St. Lawrence Canals, bringing ocean ships into our lakes, and a *cash capital* from abroad, free from taxation and interest, of *forty millions of dollars*—more than the whole banking capital of the Dominion." The italics are Mr. Capreol's. The idea apparently possessed by him and wished to be instilled into others evidently is, that the money proposed to be spent, will, every dollar of it, become part of the circulating capital of the Province, in the same way as is the capital of the banks. This idea is an absurd delusion, the mercantile system being the source whence it gets its vitality. Capital is divided into two classes—circulating and fixed. Capital which is consumed in the act of producing an object of wealth (or an utility, to use the technical phrase) is circulating; capital which is not so consumed, but is capable of being used many times over, or for an indefinite period (that is, till it is worn out) is fixed. To the former class belongs the money(or, more accurately the things which that money will represent with which it is proposed to build the canal To the latter will belong the canal itself, i constructed. In the act of construction th capital required will be converted from th former class into the latter. Let us see hov this will be so. It is said that it will cos £40,000,000 to construct the canal; Wh does this mean? Simply that it will requir that amount in food, clothing, tools, &c. f the laborers and others engaged during th 5 years in the construction of the work. A the end of that time £40,000,000 of foo clothing, tools, &c. will have been consume or destroyed, never to be replaced—that i the capital of £40,000,000 will be gone; the will be that amount less of capital in th world. Let us turn to the great authority o this subject, and see if our view is sustained Mr. Mill says, in relation to the analogou case of capital spent in making land mo productive..

"The land thus increased in productivene bears a value in the market proportionate t the increase; and hence it is usual to consid the capital which was invested or sunk i making the improvement, as still existing the increased value of the land. There mu be no mistake, however. The capital, lik all other capital, has been consumed. It w consumed in maintaining the labourers wh executed the improvement, and in the wo and tear of the tools by which they were e sisted." Again: "That part of the capit of a cotton spinner which he pays away to l work-people, once so paid exists no longer his capital, or as a cotton spinner's capita such portion of it as the workmen consum no longer exists as capital at all: even if th save any part, it may now be more proper regarded as a fresh capital, the result of second act of accumulation."

And this leads us to a limitation of wh we above put in the rough. It is true in a cordance with the last quoted words that t whole $40,000,000 will be consumed as pital, and that we get the canal in its pla We shall also, however, get something mo viz. :—whatever is saved out of the £40,00 000 by those to whom it is paid. The v proportion of it will be paid to labourc who, as a rule, save little or nothing. T main savings will probably be made, as usual in such cases, by contractors, jobb hangers on, &c. And to the extent to wh these persons save, to that extent will th be possibly a permanent addition to the c tal of the Province. It is of the utmost portance to the material well-being of t Province that our business men should h correct ideas upon these subjects. A ra glance back into an episode of our finan history will shew this sufficiently. About e years 1853-4-5-6 a large amount of money s expended in the Western District of Up Canada, in the construction of railroads—

ndon and Port Stanley, the Grand Trunk anches, the Great Western branch to Sarnia, . Some of the capital necessary was raised the spot. The far larger part, however, s got from other parts of the Province and m abroad. The inhabitants of London e chose this place not because what we have say refers to it alone, but because it was centre) indulging in a delusion similar to t under which the advocates of the canal now labouring, imagined that this expenure of money was to increase the value of d enormously and to give a tremendous petus to trade in all its branches. Upon strength of this expectation they launched into the wildest speculations in land, in n lots, in merchandize, &c., expecting en the promised Eldorado came, all would n out well, and everybody would come out h a fortune in his pocket. Though waited with patience, however, the promised es never came; then one began to fail, n another, until a crisis came on, overelming thousands in disaster and ruin, and ating quite an exodus to the States. In it is only now that that part of Canada ully recovering from the shock which its ncial affairs then underwent. Here is a ftful lesson of the danger of indulging in ue, wild ideas as to what the spending of ney is going to effect, which the advocates he scheme we are considering would do l to study and profit by.

WAR TO THE KNIFE.

The Editor of the Monetary Times.

TORONTO, Feb. 7, 1869.

he number of Insurance Companies doing ness in the city of Toronto is not small, and number of their agents, solicitors, &c., is large. e companies are English, American, and Can. Each is seemingly anxious to do as much he city business as possible—for it is found to ofitable. While I do not quarrel with them eeping up a healthy competition, I do object e manner in which the work of securing risks ne about. I do not intend, in this letter, to a very elaborate report of their proceedings, may be allowed to give a general idea of what jectionable, by the recital of a few particu- After the death of Mr. Chaffey, the agencies e Ætna and Hartford, both of which were by him, were divided, and given to different iduals. Then there was a struggle for the ness which he had controlled, and I leave it e parties concerned to justify their mode of tion. It certainly brought no credit on those ged in it.

ny of our insurance agents are unscrupulous rd and deed; they do not hesitate to resort ans the most dishonorable to undermine each ; in fact, judging by the character each gives her, the whole business is conducted by a artful dodgers. They stand on the corner e streets, planning mischief, and retailing rs which they preface with—"It is said," People say." Each professes the most miacquaintance with every other body's affairs, propagate falsehoods with their usual accompaniment—strict injunction to secresy. When tired of abusing each other, individually, they attack the different companies.

Then as to the matter of rates. The English Companies charge the Ætna, Hartford, and Home with taking risks much below tariff rates; and the Canadian Companies charge both the English (especially the Commercial Union and the Lancashire) and American, with that crime. The Provincial says the Western is ruining business by accepting such low rates, and the Western has charged the British America with allowing an agent not only to go about, abusing the Western, but taking risks below the tariff. I believe the tariff has become a non-entity, and that there is a general scramble for business at any price.

There is much "dog-eat-dog" going on. For instance: A goes to B with a risk; B declines to pay a commission, but is willing to accept the risk. A declines the terms; B therefore hurries off to the individual whose property has to be covered, and behind A's back issues a policy and saves the commission. I do not wish to take up too much of your space this week, but I hope to continue my plain unvarnished tale.

Yours, &c.,

AGENT.

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending January 22, 1869.

Passengers	$22,258 34
Freight.....	58,826 54
Mails and Sundries	1,978 28
Total Receipts for week.....	$83,063 16
Coresponding week, 1887...	65,596 53
Increase.....	$17,466 63

TORONNO, GREY AND BRUCE RAILWAY.—For the first section of the railway from Toronto to Luther, $470,000 in bonuses are required, of which Toronto has already voted $250,000, Albion $40,000, Caledan $45,000, Orageville $15,000, and Amaranth $30,000, making a total of $380,000, or $90,000 less than the amount absolutely needed. The municipalities from which it is proposed to raise these $90,000 are, Vaughan $10,000, Mono $50,000, East Garafraxa, $20,000, and Melancthon $10,000.

THE NOVA SCOTIA DIFFICULTY.

The Finance Minister's report to the Privy Council summarises the objections raised by Messrs. Howe and McLellan to the Union Act and the decision of the Dominion Government thereon. The first stage in the negotiations was an enquiry by the Finance Minister, which resulted in the following acknowledgments:

1. That the principle on which the debts were arranged by the Union Act operates with some unfairness to Nova Scotia.

2. That in the division of the property, local assets and revenues, or because the assets possessed by her were not of a character to be available, Nova Scotia is less favorably situated than the other Provinces in respect of local revenues.

3. That the increase of customs presses more directly on Nova Scotia than the other Provinces, but this apparent increase and the consequent pressure, it is believed, will be mitigated every year, as goods which she formerly imported from abroad, and which were chargeable with duty, are produced in other portions of the Dominion, and will now be available to her for consumption, free of duty.

4. That she must have raised about $400,000 annually, by way of additional taxation, if she had remained out of the Union.

5. That the amount raised by the Dominion from revenue from customs and otherwise is about adequate, if the results of last year continue in future the same, to meet all the current expenditure the Dominion is called on to make on her account, but less by $100,563, if Nova Scotia is to be charged a per capita contribution to the cost of the civil government and legislation of the Dominion.

6. That the local sources of revenue at present possessed by Nova Scotia are inadequate to carry on the services devolving on the Province.

This report having been submitted to Mr. Howe, he and Mr. McLelan raised certain objections in the interest of Nova Scotia, which objections were made the object of discussion. The result is that the following is the basis of an Act to be submitted to Parliament next session:

1. That the debt of Nova Scotia, on entering the Union, be placed at $9,186,756, and that that Province be relieved from any charge of interest, unless her debt exceed that sum.

2. That for ten years, from the 1st July, 1867, an annual subsidy of $82,698 be paid to that Province.

The committee further report their concurrence in the recommendation of the Finance Minister that Nova Scotia be debited, after the completion of the Province building, with interest on the cost of that building, until it shall have been placed at the dispesal of the Dominion.

HURON AND ONTARIO CANAL.

The Quebec *Gazette* deals with this project in the following style. Speaking of the late meeting in the St. Lawrence Hall, it says:—

They have of late fomented a constant turmoil among the ignorant masses, whom they marshal with torches, and for any thing we know, with trumpet blare and war-like drum, in procession, to—we shall not say intimidate but—impress the Local Legislature and Government with the danger of refusing the concocters of that wonderful crotchet, the Toronto and Georgian Bay Canal, the modest little sop of ten millions of acres, being, we believe, about one-fifth of all that are left to the Crown in Ontario. It has been demonstrated again and again that the project is the most perfectly Utopian conception that ever proceeded from the brain of a sane man, and yet the wire pullers of the scheme persist to scold, rant and threaten all sorts of calamities to the Government if they refuse to give the ten millions. The $40,000,000 which Mr. Capreol, the inventor and promoter of the enterprise promises to get from eminent capitalists in London and Philadelphia, have no better basis than reports of verbal conversations and vague assertions on the part of some persons to whom the impressible president and factotum submitted the georgeous prospectuses, all of course *couleur de rose*.

Commercial.

Toronto Market.

BOOTS AND SHOES.—Prices are steady; little trade doing.

LEATHER.—Business is very dull, and prices are steady as quoted. Hides are also dull; prices are slightly advanced.

FURS.—There is a quiet trade doing at quotations.

GRAIN.—*Wheat*—Receipts, 46,799 bushels, against 42,800 bushels last week. The market is dull, and declining under continued large receipts and a slack demand. Spring is dull, and offering at 96c to 98c, with no buyers over 95c; some sales occurred in the early part of the week at 98c; sales, 7 cars at 99c, 10,000 bush. March delivery at 95c. in store. Fall is offering at $1, and several cars of a good sample sold at that price. *Barley*—Receipts, 2,590 bush., and 900 bush. last week. The market is firm at $1.30 to 1.32; holders are confident of higher prices. Sales, 2,000 bush., at $1.30½ at Hamilton, 1 car at $1.30 on track, 2,000 bushs. at $1.30½ at Paris.

Peas—Receipts trifling; market nominal at quotations. *Oats*—Receipts 5,000 bushs., and 13,200 bushs. last week. There is not much demand; car loads are worth 51 to 52c. *Seeds*—The market has been quiet this week; prices unchanged at $2 to $2.50 for timothy; $6.25 to $6.75 for clover, and $1.60 to $2 for flax.

Flour.—Receipts 3,575 bbls., and 2,200 bbls. last week. Flour is dull and tending downwards in sympathy with the wheat market. No 1 superfine is now offering freely at $4.40 without buyers; $4.30 could probably be obtained for good brands. Other grades nominal. *Cornmeal*—Little doing at $3.50 to $3.75.

Provisions.—*Dressed Hogs*—The market was easier for a few days past, closing quiet as quoted; prices range from $9 to $10.12½; a car load, averaging 172 lbs., sold yesterday at $9. *Pork*—Mess is held at $26; some business was done at $25.50. *Cut Meats*—Quiet and firm as quoted. *Butter*—Nominal; 22c is about the outside that would be paid for shipping lots, 23 to 24c has been obtained for small parcels at retail.

Freights.—Rates by Grand Trunk Railway:—Flour to all stations from Belleville to Lynn, inclusive, 35c., grain per 100 lbs. 18c.; flour to Brockville and Cornwall, inclusive, 43c. grain 22c. flour to Montreal 50c. grain 25c.; flour to all stations between Island Pond and Portland, inclusive, 85c. grain 43c.; flour to Boston 90c., gold, grain 45c.; flour to Halifax $1.05, grain 53c; flour to St. John 95c. Boxed Meats to Liverpool per gross ton 82s. 6d.; lard or butter in tinnets 87s. 6d.; Pork 115s. per tierce; flour 5s. 6d. per barrel; grain 12s. per 480 pounds. Rates by Great Western Railway—Flour, Toronto to Suspension Bridge 25c. gold; thence to New York, 92c. U. S. currency per bbl.; to Boston $1.02. Grain to Bridge 13c., gold; thence to New York 47c, U. S. currency; to Boston 51c. Grain, Toronto to Detroit, 18c. ber 100 lbs; flour 35c per bbl.

Demerara Sugar Market.

The following is from Sandbach, Parker & Co.'s Circular, dated Georgetown, January 7, 1869:—

Sugars.—Transactions have been on a small scale, the depressed state of the American market deterring shippers, and as the prospects of the English market are much better than they have been for some months past, Planters prefer shipping to the United Kingdom on their own account, to accepting the offers made to fill American orders. We quote the prices asked for the different grades of Sugar, but the sales have been very small. We regret exceedingly to see this check on the demand from the United States, as the trade has been assuming proportions of late that promised an outlet for our productions but little inferior to England. Our shipments in 1866 were 7,240 hhds.; in 1867, 13,116 hhds.; whilst in 1868 they have reached 82,614, all Vacuum Pan sugar. The total shipments have been in 1865, 86,110 hhds.; in 1866, 91,580 hhd.; in 1867, 82,039 hhds., and in 1868, 89,654.

Molasses.—The demand has been very slack, and planters prefer making the article into rum, to accepting the rates now current. The shipments have been in 1866, 15,180 puns.; in 1867, 24,028 puns., and in 1868, 25,221 puns.

Rum.—Very few transactions; the bulk of the crop going to the United Kingdom. The shipments in 1866 were 30,968 puns.; in 1867, 25,824 puns., and in 1868, 24,680 puns.

Transactions have taken place during the fortnight at the following rates:

Sugars (package included) sold by 100 lbs. Dutch, 10 per cent. tare.

In hhds. of about 1800 lbs. each.

Muscavadoes, equal at No. 8 Dutch Standard	$3.80 ₱ 100 lbs.
No. 10 do.	$4.00 "
" 12 do.	$4.25 "
Vacuum Pan No. 12 do.	$5.40
" " 14 do.	5.60
" " 16 do.	5.80 to 6.00
" " 17 do.	6.00 to 6.10
" " 18 do.	6.10 to 6.25

Molasses (package included, sold by Imperial gallon.)

Muscovado, from 18 @ 23 cents, as to color and density	In puns of 100 gals.
Vacuum Pan from 20 @ 30 cents, as to color and density	
Rum (colored, package included, sold by Imperial gal. from 35 per cent, @ 38 overproof 44 @ 48 cents.	Ditto.
From 38 per cent. @ 44 overproof, 50 @ 54 cents.	

Stock of Teas in Montreal.

In the statement of the stock of Teas in the hands of importers on the 1st instant, which we published yesterday, there was a typographical error. The quantity of Souchong and Congou showed 3,201 half-chests in place of 320. The statement is repeated with the correction:—

1st January, 1865.

Halifax Market.

Breadstuffs—Feb. 2.—Our markets for Flour, for the past week, have been characterized by a light demand, with receipts largely in excess. Holders evince considerable anxiety to sell, and lower figures have been accepted. Buyers continue to look for lower prices, in which they are borne out by past experience, which proves that our markets do not sympathise with advances abroad when stocks are large here, holders preferring to sell even at old rates. We quote White Wheat Extra (Fall) $7.25 to $7.50; Fancy, $6.60 to 6.85; Bakers' Strong, $6.40 to 6.50; Supers, $6.00 to $6.10; No. 2 (dull), $5.00 to 5.25; Middlings, $4.50 to 4.75.

West India Produce—Continues firm, at former quotations, with light stock. Sugars are in request for Montreal. The first cargo of new Cienfuegos Molasses was offered at auction last week, and realized 35c to 36c, for about 50 Puns. Rum is still held at 60c, though 58c would probably be accepted for large purchases. Coffees dull, without change. We quote Sugar, V. P., 9½c; Porto Rico, 8½c to 8¾c; Cuba, 8c to 8½c; Barbadoes, 7¾c. Molasses—Cienfuegos, 35c to 36c; Trinidad, 30c to 33c. Rum (in bond), Demerara, 60c. Coffee—Jamaica, 13c to 15c; St. Domingo, 10c. to 12c.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Feb. 10, 1869.

During last week we experienced one of the most severe snow-storms that we have had for several years. Our streets are piled with drifts. Communication with the West was for some two days interrupted, and the country roads are still very heavy, so that business has been at a standstill, and our local store-keepers being well supplied, all parties have more or less rested on their oars. We have had some failures in the dry goods trade. The prospect is not very bright for that branch of business at present; the trade has been rather overdone, and the weeding out that had in the summer amongst the grocery men, seems likely to be repeated in the dry goods trade this winter. Over-trading is the cause of all the disasters; but this is an evil which cures itself every few years.

The only relief to the present dullness has been the visit of Sir John Young, who was cordially received. The fall of the roof of St. Patrick Hall has also caused considerable excitement. Fortunately, only few were injured, and none seriously.

Groceries.—The market during the week has been very dull. Sugars and Teas are firm, and command full rates, especially for desirable grades of the latter. Molasses also are stiff. Very little doing in other goods, but the prices of all staples are firm.

Iron and Hardware.—There is very little to report, and no changes in prices except Tin Plates which have advanced fully 50c per box. This is caused by a rise in England.

Produce.—Notwithstanding the recent severe storm, the market for Flour has been amply supplied, and prices during the week have rather declined. It is difficult to say what the rates really are, as for the most part the quotations are purely nominal. Total receipts from 1st January to 3rd instant, 44,135 barrels, against 34,109 barrels same period last year, showing an increase of 10,025 barrels, whilst the shipments show a decrease of 2,901, being in 1869, 16,190 barrels against 19,081 barrels in 1868. Grain of all sorts remains very dull, and there is no change in prices. Stocks generally are accumulating, but holders are not pressing sales.

Provisions.—It was generally thought that the recent delays in the trains would have raised the price of cattle, but such has not been the case, as we had an ample supply on hand. Rates rules exceedingly high, first-class heavy dressed Hogs having sold as high as $11, a price almost unprecedented. Barrelled Pork rules high in proportion, but at the price of hogs, no packing going on. The market for Butter is dull, and prices are unchanged.

Brandy,

The following were the shipments of Brandy from Charente to the United Kingdom, for the years ending 30th June, 1864 to 1868, by the following firms. Casks commuted to puncheons:

	1864. puns.	cases.	1865. puns.	cases.
Jas. Hennessy & Co	10,196½	73.572	7,275½	10
Martel & Co.	8,935½	37.267	6,543	4
Otard, Dupuy & Co.	2,132	14.593	1,430	1
Denis Mounie & Co.	674½	12,195	363	1

	1866. puns.	cases.	1867. puns.	cases.	1868 puns.	c
J.Hens'y&Co.	9819½	166491	12509	195633	10549½	2
Martel & Co.	7960½	89158	10130	112026	9153	1
Otard, D'py& Co.	2020½	20886	2401½	20546	3268	9
D. Mounie & Co.	878	28476	512	19379	532½	

Tea Movement.

A telegram from Hong Kong, Dated 15th December, gives the exports of Tea from China to Japan up to that time as 125,000,000 lbs. This is an increase of 31,000,000 lbs, on the exports about the same date in 1867, which amounted to 94,000,000 lbs. against 91,557,800 lbs. in 186

anada Farmers' Mutual Insurance Company.

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY,
EDWIN W. BRYANT, ACTUARY,
GUY. R. PHELPS, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS.

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members, nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

Canada Life Assurance Company.

CAPITAL AND CASH ASSETS

OVER $2,000,000.

SUMS ASSURED

$5,000,000.

A COMPARISON of the rates of this Company with others cannot fail to demonstrate the advantage of the low premiums, which, by the higher returns from investments, it is enabled to offer.

IF PREFERRED, ASSURERS NEED ONLY

PAY ONE-HALF OF EACH YEAR'S PREMIUM IN CASH,

during the whole term of policies on the 10 payment plan or for seven years on the whole life plan.

For the unpaid portion of premiums,

"NOTES" ARE NOT REQUIRED BY THIS COMPANY

so that assurers are not liable to be called upon for payment of these, nor for assessments upon them, as in the case of Mutual Companies.

Every facility and advantage which can be afforded is offered by this Company.

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 Sterli

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodic Bonuses, so as to make Policies payable during life, without any higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for family,* and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum insured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

THE CANADIAN

MONETARY TIMES AND INSURANCE CHRONICLE.

THE Publishers have pleasure in announcing that the success of this JOURNAL has been such as to stimulate their efforts to render it still more valuable to the classes directly and indirectly interested in the subjects with which it deals. As the only Journal in the Dominion which gives particular attention to INSURANCE, it has enlisted the hearty support of Insurance Companies; and while, on the one hand, it contends for the rights of such Companies, it equally recognizes the rights of the public.

The subject of BANKING has become of such importance, as well by reason of past legislation as by reason of anticipated changes in the law respecting circulation, that it is the duty and interest of our business men to make themselves acquainted with the principles on which sound Banking rests, and to prevent any action on the part of the Legislature likely to injure the community by lessening the usefulness of our banks. The discussion of this subject in the columns of this JOURNAL has called forth expressions of satisfaction from our most astute financiers, and has done much to give us the position we now occupy in the estimation of the public.

As MINING is in its infancy in this country, a journal devoted solely to the subject could not hope to thrive; but by giving full information regarding Mining operations, and by the employment of reliable correspondents, we have done good service to an important interest, and secured recognition from a class which, otherwise, could not have been reached.

Our purely COMMERCIAL DEPARTMENT has not been neglected, and each week's summary, while concise and pithy, has answered the same ends as a more diffuse elaboration could do, and conveyed to country dealers a complete synopsis of the changes in the Toronto and Montreal Markets.

This combination of interests which the circumstances of the country render necessary, has been of the greatest advantage to each interest by diffusing information among all classes; but, in order to do justice to all, we have been compelled to employ a large staff of writers, and to expend a considerable amount in securing trustworthy correspondents.

While we are thankful to those who have encouraged us thus far, we are anxious to extend still further the usefulness of this Journal, and we call on all who consider that the enterprise is worthy of support, to lend us their assistance in making the MONETARY TIMES a national organ.

On our part we promise impartiality, efficiency, and the best efforts of the ablest writers that can be secured in the Dominion. On the part of our clients, we expect a cordial support and active exertion to widen our sphere of usefulness. In helping us, they help themselves.

Every Merchant, Banker, Capitalist, Insurance Agent, and Broker, can aid us, and we hope that we are not asking too much, in soliciting their assistance.

We shall be happy to receive at any time articles on subjects within our jurisdiction, which, if used, will be liberally paid for.

Subscription Price.....$2 per Annum.

A reasonable discount will be made to Banks, Insurance Companies, &c., which subscribe for their Agencies.

SEND FOR A SPECIMEN COPY.

N.B.—Every subscriber to THE MONETARY TIMES will receive THE REAL ESTATE JOURNAL without further charge.

THE REAL ESTATE JOURNAL.

The objects of this Journal are as follows:—

(1.) To supply to those interested in real estate such information as is of special interest relating to sales or transfers of real property in the principal cities, and throughout Ontario, construction of public works, and building improvements of every kind, increase or decrease of municipal expenditure, debt and taxation, and, in short, whatever tends to influence the real estate market.

(2.) Leading articles will be furnished by competent writers on questions relating to conveyancing, the rise and fall of property, land grants, emigration, and other subjects coming within the legitimate scope of the Journal.

(3.) Lists of lands and houses for sale in every city, town and village of the Province, will appear in its columns, giving buyers the best possible opportunities for selecting desirable properties of any class, and in any locality; and, at the same time, affording sellers a reliable and certain medium for reaching intending purchasers.

(4.) By a circulation extending into every corner of Canada, the announcements of advertisers will be brought to the notice of an immense constituency of readers. A special feature in this connection is, that the Journal will be placed and kept on fyle at all the principal hotels, reading rooms, and other public places in Ontario, and in Montreal. By these means it is confidently believed that every class in the community will be reached.

THE REAL ESTATE JOURNAL is printed fortnightly, on good white paper, in quarto form, and is equal in size and appearance to anything of the kind published on this continent.

Advertising, per line of nonpareil, each insertion, 5 cents. A small discount will be allowed on yearly contracts, for large spaces.

Address, "THE REAL ESTATE JOURNAL," Toronto, Ontario. Cheques should be made payable to J. M. TROUT, who will also issue all receipts for money.

OFFICE, No. 60 CHURCH STREET,

TORONTO, ONTARIO.

PROSPECTUS OF THE
ONTARIO PEAT COMP'Y.

LIMITED LIABILITY. - - - - - - - HEAD OFFICE—TORONTO.

To be Organized under the Act 27 and 28 Victoria, Chapter 23, and the Amendments thereto.

THE property of the company forms a portion of the well-known "Cranberry Marsh," in the Townships of Humberstone and Wainfleet, County Welland, and Province of Ontario, traversed by the Welland Canal, as well as by its "Feeder," which is also navigable; and is composed of t following lots, viz. :—

	Acres.
Humberstone—South halves of 28, 30, 32 and 33. Concession IV	400
Wainfleet—South halves of 6 and 7, Concession IV	200
" Whole of 10, Concession II, and the whole of 10 and 11, Concession III	600
" Parts of 8 and 9, Concessions IV. and V., about	200
Total	1400

A main ditch six feet deep has been made by the County through the whole of this Marsh for surface drainage, at an expenditure of $50,000; a this ditch runs along a portion of every one of the above lots, except two which abut upon the feeder of the Welland Canal.

The several lots above enumerated were the first chosen from the Marsh, having been selected for their great value as Peat Deposits. T remaining Peat lands have been obtained by the Anglo-American Peat Company, which has been operating most successfully during the past seas upon a lot adjoining one of the Company's lots. A most satisfactory report has been obtained from Frederick Holmes, Esq., the County Engineer— gentleman who has had large experience in these peat lands, having not only surveyed and laid off the Marsh into lots for the County, but has also be employed as superintendent in the ditching operations which have been undertaken and carried out through the whole extent of the Marsh. H estimate of the quantity of Peat contained in the Company's lands is placed at three millions of tons, at the very least; and this estimate is fully bor out by the eminent firm of Messrs. Macdougall and Skae, Civil Engineers, Toronto, who were specially despatched to make a personal examination the property, and whose report is subjoined.

Peat can be laid down on the banks of the canal at the cost of from $1 to $1.25 per ton, and can from thence be forwarded by water to market in directions, at small cost, and without transhipment; to say nothing of the facilities and advantages afforded by no less than five railways, one of whic the "Buffalo and Lake Huron," passes within twenty chains of the property. In addition to these advantages, the fact may be noticed, that abo thirty vessels pass through the canal every day during the season of navigation, the steamers requiring fuel for their own use, and the sailing vess seeking cargoes, and requiring ballast westward to Chicago and other points.

The demand for this fuel for private consumption will be very great when its superior qualities become more widely known. Already railways a steamers are beginning to use it instead of wood and coal, with the most satisfactory results, experience having proved that one ton of peat is equal about one and one-third cords of the best hard wood. With a view to the full and proper development of this property, it is proposed to organize t Company with a capital of $120,000, in 2,400 shares of $50 each; $50,000 of this sum to be retained by the Directors for working capital, the balance be applied to the purchase of the real estate. It is also proposed that 25 per cent shall be paid at the time of subscription, and the balance in calls 10 per cent at such times as the Directors may name, but not oftener than once in every three months, from 1st of January, 1869.

The affairs of the Company will be managed by a Board of five Directors, the first set to be provisional, and, as soon as the charter is obtained a the Company organized, the permanent Directors to be chosen by the Shareholders, and to be elected annually.

The principal office of the Company to be in the City of Toronto. The property has been conveyed to Peleg Howland, Esquire, who will hold t ame in trust until the Company is organized

PROVISIONAL DIRECTORS.

ALFRED TODD, Esquire, Ottawa. EDWARD A. C. PEW, Esquire, Welland.

Further information can be obtained at the office of

C. J. CAMPBELL, Esq., Banker, 92 King Street East, Toronto,

Who will act as Provisional Treasurer, and will also receive subscriptions for Stoc

CHAMBERS, 17 TORONTO STREET, TORONTO, JANUARY 11, 1869.

To the Directors of the Ontario Peat Company,—

GENTLEMEN,—We have the honor to lay before you the following report, on the Peat Beds in the Great Cranberry Marsh, situated in the Coun of Welland. The swamp, or to call it by a more proper name, moor, for it is more like the moors of Scotland than the swamps fo this country, interseeted by a large drain, which at present carries off a considerable quantity of water; and from its juxta position, to the lots owned by your compa could be made available for drainage purposes. The moor rises gradually from its northern limit in concession 4, to its summit, at the south end concession 3, about four feet on two and a half miles, where it is about eight feet above the level of Lake Erie; while, on the north, from the end of t moor to the Welland River, distant about a mile and a half, there is a fall of sixteen feet. Following the course of the water through the vario drains, the result arrived at is, that the moor is higher than the surrounding country, which is under cultivation.

The peat on this marsh, brought up by the boring rods, as well as that lying on the sides of the drains, thrown up when they were made, shows good quality of a dark black color, in every lot. There is a layer of red peat in some of the lots of the Township of Humberstone; but generally t peat was of the dark colour above mentioned. The surface of the marsh, or moor, has been burnt once or twice, so that there is not much moss or upp growth, nor are there many trees alive; and on the lots owned by your company this is more marked. The lots are conveniently placed for workin and connections could be formed, at a small cost, to the several outlets that surround this tract of land; and the surface being regular, no difficul would be encountered in laying tramroads.

In making the borings for this report, the valuable assistance of the County Engineer, Mr. Frederick Holmes, was obtained, as he had superintend the making of the drains, and had laid out several of the lots some years ago, and since that time had been intimately acquainted with the moor. T depths arrived at give an average of six to eight feet of peat over all the lots in the 3rd and 4th concessions, while in the lot of the 2nd concessi of the Township of Wainfleet, the peat is very deep, averaging about 15 feet, and it is said to go even deeper. There are 200 acres in this lot.

The regularity of the upper surface of this large tract of land, both peat and arable, being combined with the result of the borings taken, tend to conclusion that the bottom of the peat bed must also be regular, as there are no hills or mounds of any size or consequence in the vicinity.

The Anglo-American Peat Fuel Company have been at work during last summer on a portion of this marsh, opposite to some of the lots owned b your Company. They find the loss, by weight and shrinkage to be 75 per cent.; or to make one ton of peat fuel, four tons of peat are required. Th is less than that of a similar project in the Lower Province, where the shrinkage is 85 per cent.

From the data and experience of the Anglo-American Company, taking the loss by weight and shrinkage at 75 per cent., with an average of fr six to eight feet over all the lots, but that in the 5th Concession of Wainfleet, which is taken at sixteen feet, we find the property of your Compan situated in the marsh, to be capable of producing over 3,000,000 tons of fuel.

A fuller report, by us, lies in the hands of Mr. C. J. Campbell, Banker, King Street, Toronto, to which also we beg to call your attention.

We have the honour to be, gentlemen, your obedient servants,

MACDOUGALL & SKAE.
CIVIL ENGINEERS

Meetings.

NORTHERN RAILWAY.

The annual meeting of the Northern Railway Co. took place on the 10th inst., in the Company's offices, Brock street, Toronto.

Mr. F. W. Cumberland read the annual report of the Canadian Directors as follows :

To the Proprietors of the Northern Railway of Canada.

TORONTO, 10th February, 1869.

The Canadian Directors have the honour to present their Report for the year ending 31st Dec., 1868, with accompanying Statements of Account, Auditors' Reports, and Departmental Returns :—

1. The gross Traffic receipts of the year have amounted to $550,070 24 (£113,028 2s. 7d. stg.,) as in comparison with $561,370.25(£115,350 0s 11d stg.) in 1867 ; showing a decrease of $11300.01 ($2,321 18s 1d stg.) On examination of the earnings arising from the respective sources of traffic, it will be seen that this decrease is more than accounted for in the one item of "square timber," in which the decline is due to gradual exhaustion of the supply.

For this decline, the Directors have been prepared for some years, confidently anticipating, however, than any special loss of this character would be succeeded and compensated by the growth of other and more permanent classes of traffic of higher value. In confirmation of this view, it is satisfactory to find that the Passenger traffic has, during the past year, yielded an advance of $9,095.60, or in comparison with 1866, the important increase of $22,945.90. Again, whilst the transport of square timber has fallen from 2,713,266 cubic feet in 1867, to 1,616.561 feet in 1868, showing a reduction of no less than 1,096,705 feet, that reduction has been compensated for by an advance in the article of sawn lumber (a much better and more remunerative freight) from 44,790,000 feet in 1867 to 54,954,000 feet in 1868, or an increase of 10,164,000 feet, in an item of trade which is in continuous and rapid extension, and of permanent character.

Due to an exceptional condition of the grain market arising from the low local prices and the abundant harvests abroad, the traffic in grain and flour has been subject to unusual fluctuations ; but as the area under cultivation in the districts tributary to the line is ever increasing, this class of traffic cannot be subject to any continuous decline. On the whole, it is very satisfactory to observe, that notwithstanding these heavy, although but temporary, fluctuations in the staples, the gross earnings of the Railway have not been sensibly affected, excepting in so far as that they have been realized from a higher class of traffic.

2. The ordinary working expenses of the year have amounted to $335,894.31 (£69,019 7s. 7d. stg.) as against $332,861.20 (£68,396 2s. 9d. stg.) in 1867; giving a rate on the gross traffic receipts of 61.06 per cent. in 1868 as in comparison with 59.29 per cent. in 1867, being a difference of 1.77 per cent. in favour of the previous year. This rise is directly traceable to two or three special items of expenditure, due either to exceptional causes or to deliberate policy. Thus, the cost of fuel wood has risen from $2.26 per cord in 1867 to $2.90 in 1868, resulting chiefly from undue competition, and a breach of contract. Again, twice during the year the line has suffered severely by fires from the forest, and although the Company was well insured upon its buildings, the damages to permanent way and the destruction of fuel wood were somewhat extensive. Unusual liberality, too, has been exercised in the past year in repair of permanent way, the expenditure upon this item alone, in new rails and ballast, having exceeded that of 1867 by $9,842, 1,103½ tons of new iron and 27,347 yards of ballast, having been put into the track during the season. In the item of Fire Insurance, which is one rather of prudence than actual working necessity, the Directors have adopted the policy of ample protection; and the charges for this service have accordingly risen from $4,318.37 in 1867 to $7,827.20 in 1868, the latter sum including not only largely increased fire policies, but also the insurance against casualty and death of all employees engaged in hazardous duties; a provision towards which the employees themselves contribute, and which it is believed attaches great value and stability to the Company's service. In view of these items the Directors are enabled to state that the ordinary outlay in wages, materials, and supplies, as set forth in the respective appendices, has been so far reduced as to admit of these special provisions without any sensible increase in the aggregate expenditure, which, for all services on Revenue Account, has amounted to $391,859.29 (£80,519 0s. 8d. stg.) in 1868, as against $422,422.75 (£86,803 6s. stg.) in 1867, being a decrease of $30,562.46 (£6,284 5s. 4d. stg).

3. During the year new and additional equipment in works, rolling stock, &c., has been provided for, to the amount of $55,964.98 (£11,499 13s. 1d. stg.) Amongst the items of this expenditure may be named the addition of nearly two miles of new sidings to stations and mills, the new stations at Allandale, and Bramley, two new locomotive engines, seven new freight cars, and other works and outfit, as detailed in appendices K to N, inclusive. To these services of extension, so essential to the active and economical handling of the traffic, the Directors continue to devote anxious consideration, taking care, however, so to distribute the burthen as not to overtax the revenues of any one year.

4. The current Interest Dividends on the 1st and 2nd Preference Bonds have been duly provided for and paid, and a balance carried forward to 1869 of $33,657.80 (£6,915 19s. 9d. stg.) to the credit of Interest Dividend Account.

5. The line has been worked during the past year with singular and complete immunity from accident or casualty to traffic, due in great part, it may be reasonably claimed, to the substantial condition of its works, and to the efficiency of its staff, in all departments.

6. In their report of last year, the Directors adverted to the necessity of making extended provision for the further development of the traffic of the district, and they expressed their intention of seeking legislative sanction to such changes and readjustment of the capital as would warrant the Company in undertaking the necessary works. They have now to report that during the last session of the Dominion Parliament an Act was passed empowering the Company to make a limited addition of £50,000 sterling to its capital for certain

specific purposes, such new capital to rank for interest and security next after the existing second preference bonds. The preliminary conditions imposed by that Act having been complied with, it is now in legal operation, and the Directors have accordingly made all necessary preparations for executing such works as are primarily essential. It is contemplated to construct during the current year a new grain elevator at Toronto, having a storage capacity of 275,000 bushels, and an elevating and shipping power of 20,000 bushels per hour. The elevator wharf will be constructed in 15 feet water, will be 490 feet long, by a width of 70 feet, solid, and will be capable of storing three million feet lumber for shipment, and of accommodating seven vessels alongside for lumber and four for grain, to load simultaneously. The cost of these works, complete with approaches and tracks, is estimated at $140,000. The Directors trust to be able in the following year (1870) to erect works of a like class, but of smaller capacity, at Collingwood. With these works, together with the future appropriation of the present elevator wharves at Toronto and Collingwood to the storage and shipment of ordinary freight, the Company will be in a position to command and work an extended traffic with great economy and despatch, assuming of course that the locomotive and rolling stock equipment shall continue to receive gradual extensions, such as have been added from time to time during the past few years.

7. During the past year the Directors have actively promoted the construction of the Rama Canal and Portage, a work of much necessity and importance, as establishing cheap and efficient connections between the territory of the Black River and Lakes Saint John, Couchiching and Simcoe, and bringing those districts into direct relation to this railway and the city of Toronto; and they are now happy to report that, by the enterprise of a separate corporation, the works are already far advanced toward completion, and will be ready for public use early in the spring.

8. Authority was granted during the last session of the Legislature of Ontario for the construction of a canal uniting Lakes Muskoka and Rousseau, and for the establishment of a tramway to unite the traffic of those lakes with Lake Simcoe and (by this line) with the city of Toronto. To the success of these enterprises the Directors will contribute whatever influence and assistance they can command.

9. The lumbering interests of the North Shore of the Georgian Bay are in course of very rapid and extensive development, several large establishments having been started there during the past year, whose aggregate production is estimated at from thirty to thirty-five millions of feet per annum. Much of this production will necessarily seek Western markets, but it may, nevertheless be expected to contribute a considerable increase to the future traffic of the line, wilst, if this development be fairly watched, it may be made to yield a new element to the trade of this city.

10. The wise liberality of the Legislature in relation to the free grants of agricultural lands, and to mining interests, gives reasonable hope that immigration and settlement will be greatly promoted, and a new impetus givin to mining enterprise. These influences cannot fail to result beneficially to this railway, especially under such a liberal policy in its management as shall assist in every effort towards the development of the Upper Lake Districts. It is with regret, therefore, that the directors observe that the steam vessel service of the Georgian Bay and of Lake Superfor continues in an unstable and unorganized condition, very prejudicial to the growth of trade and to the commercial interests of Toronto. Fully prepared to contribute to the improvement and permanency of this important service, by close traffic connections of liberal chracter, the directors necessarily await some such combined action with the postal service as shall secure an organized system of steam communications of the extent and character which the growing importance of the North West Territory and public interest would seem to suggest.

(Signed) FRED. CUMBERLAND,
Managing Director.

JOHN BEVERLY ROBINSON,
President.

On motion of the President, seconded by Mr. G. H. Wyatt, the report was adopted.

Ald. Bell moved that W. Gamble and J. Brown be re-appointed Auditors.—Carried.

Ald. Baxter, seconded by D. Crawford, moved that F. C. Capreol and E. M. Carruthers be appointed scrutineers for the ballot for election of directors.—Carried.

Some discussion then arose in reference to a reduction of the passenger rates and the rates for freight.

Mr. Cumberland said, that if he knew it to be advantageous he would instantly reduce the fares. But the danger was that they might make a mistake in that direction. He quite concurred in the general principle referred to, that, where possible, a reduction of fares should be made—although such reductions were not always attended with a beneficial effect, as in the case of the Post Office, the reductions in which had not resulted in the way expected by the public. If they could increase the travel in such a ratio as to compensate for the decrease of fare, then it would be the policy of the Company at once to lessen their rates. The matter had been a frequent subject of discussion at the Board, and one of almost continuous thought with himself. For himself, he was inclined to think it would be well to make an experiment of that character. If they had a large urban population, they could deal with the subject with courage. But, their rural population could not be drawn out, except once or twice a-year. Those interested in commercial pursuits alone would take advantage of it. As for the periods in which the other class were likely to be drawn, they could be provided for by public excursions. It had occurred to him that possibly they might, during the summer months, try the experiment of reducing the cost of return tickets. His idea was that this should be done without touching the existing tariff, or, in other words, that return tickets should be available for a return and a-half. This experiment, he thought, ought first to be tried with reference to Toronto. Return tickets to and from Toronto might, perhaps, be reduced in order to see how the main traffic of the line, that is, to and from Toronto, would be affected. Then, if desirable, the principle might be extended to other stations. At present, the freight tariff was as low as that on any other line, and indeed, as low as it could be; and for the ordinary course of freight business, it was at present so low that it would not be wise to make any further reduction. His own idea and that of the Directors generally, was to reduce the fares as low as possible and as rapidly as possible; and if trade increased in future, as might be expected, it was quite possible such reductions might with safety be made.

The meeting then adjourned until 1 o'clock, in order to allow of a ballot for the Directors.

SPECIAL MEETING.

Immediately after the above meeting, a special general meeting of the Company was held for the purpose of authorizing an issue of Third Preference Bonds under the provisions of the Northern Railway Act of 1868.

Mr. Cumberland said that this meeting had been made special in order to comply with the terms of the Northern Railway Act of 1868, passed last session. The object of that Act, as briefly stated in the annual report, was to enable the Company to proceed with such works of extension as were particularly necessary to serve the traffic of the district. During past years they had been making considerable additions to all the equipments, but found they could not do so with the rapidity with which trade demanded. They, therefore, found themselves in this position, that they had either neglect the interest of the district of Toronto a the counties of York and Simcoe, or else they h to seek means to enable them to make essent additions. Among primary objects, they had lo felt the necessity of a good elevator at Toronto. The present one was old, inconvenient and cost and the time was not far distant when it wo cease to be safe. Therefore, they desired to up a good structure, of greatly increased capaci so that hereafter the whole produce of the coun might find a point at which ample storage sho be given during the winter at a cheap rate. Wi the present building they could not secure ch ness ; for the elevator was so inconvenient as give rise to an unnecessary large amount of ha ling and labour. For this reason the Comp could not come down to the ordinary ave charges of such services. But the building a to be constructed would be one of the finest on continent for its class, and in it they would be a to handle the grain at a minimum cost. But Company did not look altogether to their own nefit. They were not avaricious—and hence difference in cost between the present rates those when the new building was up they wo give to the trade. All that the Company desi was to make a legitimate profit ; and that he lieved they had already amply demonstrated. the proposed arrangement the value of the er would be increased, and also the profits of shipper. He would announce that a prelimin conditional contract had been entered into for construction of the Elevator for $150,000. plans were at present in the engineer's room could be examined by the meeting. The work in the hands of their old friend, Mr. Reekie, had undertaken the contract. This would, doubtedly, be of great advantage to the Comp for anything Mr. Reekie undertook would be done. The credit of the Company financially w be aided rather than injured by any operation the kind with which he was connected. Alre the Company had commenced the purchase of terial ; within 10 days a crib would be commen and in two or three months another, and a c table wharf would be seen arising out of the bour—attesting not only the increase of Company's trade, but also the general prosp of the city.

Mr. D. Crawford, seconded by Mr. Moat, moved that the Directors be authorised to i under the provisions of the Northern Railway of 1868, third preference bonds, class A, to extent of £50,000 sterling, for the purpose templated by the said Act.—Carried.

The Scrutineers reported the election of the lowing Directors for the ensuing year :—Ho B. Robinson, F. W. Cumberland, Lewis Mo D. Crawford ; and John A. Chowne, H. Whe and H. M. Jackson, of England.

A vote of thanks was then passed to the D tors, on motion of Mr. G. H Wyatt, for very full and satisfactory report.

Mr. F. C. Capreol seconded the resolution.

Mr. Cumberland explained that Mr. Reekie ing undertaken the construction of the elev had resigned his seat at the Board. His colle regretted very much parting with him, and h that as soon as he was free to rejoin them would again have the pleasure of welcoming to the Board. The meeting then adjourned.

—At the annual general meeting of the Can Engine and Machinery Company of Kingston, in Montreal, the following named gentlemen elected as Directors for the ensuing year, vi Henry Yates, Esq., of Brantford; Messrs. G Stephen, R. J Reekie and E. T. Taylor, of treal ; and Robert Cassels, Esq., of Quebec. a meeting of the new Board, held immedi after, Henry Yates, Esq., was unanimous elected President.

ANADA LANDED CREDIT COMP'Y.

he Annual Meeting of this Company was held oronto on the 11th February. The President called to the chair. The following Report read by the Secretary:—

he Directors present to you the report of the pany's operations for the year 1868.

t before placing under your notice the figures he principal items of accounts, the Directors themselves of the earliest opportunity to con-ulate you on the continued satisfactory posi-tion of your affairs.

he issuing of Debentures in Canada and the g of money on deposit are measures which have now been in practical working for nearly three years, and as will be seen by the following figures, have, with the amount received on capital account, resulted in a considerable increase of busi-ness.

	1866.	1867.	1868.
Capital Stock.....	$122,884	124,422	204,458
Debentures	115,448	129,334	155,814
Deposits	27,427	36,073	56,942
Loans.....	251,600	302,400	408,550
Value of Estates Mortgaged.....	800,230	631,030	1,261,697

The increase in the Capital Stock account is the rest of the three calls made during the year; hese were very well responded to, and the amount thus realized, with the amounts received on De-benture and Deposit accounts, have enabled us to increase our Loans by upwards of $100,000.

The Directors will follow in this account the divisions adopted in their preceding reports, under the several heads of Loans, Annuities, Debentures, Deposits, and Profits and Loss.

MORTGAGE LOANS.

The Mortgage loans effected in 1868 were in amount.....	$137,500
The Mortgage loans effected since the foundation of the Company to 31st Dec., 1868, have been in amount.	539,450
Of is sum there has been paid into the Sinking Fund, and received by anticipated repayments.....	130,900
Leaving a balance due to the Company, 1st Dec., 1868.....	$408,550
The amount due 31st December, 1867, was	302,400
Showing an increase in the year of....	$106,150

A few years ago, when our progress was so much retarded by the influence of the Civil War in the States, the Directors deemed it necessary, as a temporary measure, to increase the profits by low-ering the rate of interest allowed on payments into the Sinking Fund; but now, in more prosperous times they have gone back to the old law, which gives six per centum on such payments. This will take effect on all mortgages effected from the present time; and the term will, of course, be henceforward the old term of 23 years.

ANNUITIES.

The Annuities payable to 31st Dec., 1868, amounted to	$45,757 61
As amount the Company has re-ceived	43,185 73
Leaving a balance to receive of.....	$2,571 88

The sum of $2,571.88, we find has been reduced during the past month to $1,930.58.

DEBENTURES.

The amount of debentures issued during the year 1868 was $35,150.

The total amount of debentures in cir-culation on 31st December, 1868, was,..... $155,814 76

On 1867 it was..... 129,334 74

Being an increase of..... $26,480 02

The very low rate of money which ruled in England, during the whole of 1868 enabled the Directors to effect a renewal of nearly all the de-bentures falling due there during the year, and for longer terms than the original debentures were issued.

But the aggregate amount of debentures held there has not increased.

DEPOSITS.

The amount of sums deposited during the year 1868 has been.....	$78,621	35
The balance on 31st Dec., 1868, less interest, was.....	53,222	00
Of which there was deposited at 5 per cent.....	3,635	00
And at 6 per cent	49,587	00
	$53,222	00

PROFIT AND LOSS.

The balance of the Profit and Loss account for the year 1868, after paying current expenses and allowing for the usual deductions, is $8,405.39, to be dealt with by this meeting.

The Directors recommend that a dividend of 3½ per cent. for the half year be paid, which will ab-sorb $6,300, leaving a balance of $2,105.39, to be carried forward to the credit of the next account.

The duty of inspection which has always exist-ed in certain parts of our administrative work, we have during the past year extended to all our operations, and we doubt not it will be attended with the very best results.

The Directors regret that it should be their duty to bring under your notice the default of certain shareholders in payment of the calls made so far back as 1865 and 1866. Every reasonable indul-gence has been extended to them, and we recom-mend both for the interest of the Company gene-rally, and in justice to those shareholders who paid so promptly, that the declaration of forfeiture made by the Board on the 28th of October, 1868, be now confirmed.

The President then offered some some remarks explanatory of the Report. He mentioned that the amount of mortgage loans effected during the the year, $137,500, was composed of 283 applica-tions of whic 202 were granted and 81 declined. The balance due the Company under the head of annuities was, on the 31st Dec., $2,571·88, and this sum had been reduced, during the past month to $1,930·58. During the year, $35,100 of deben-tures had been issued nearly all of which had been sold in Canada. After paying the dividend $2,105·39 would remain to the credit of next year's accounts. He confidently expected such an increase of loans as would enable the company to pay 8 per cent, dividends in future. After refer-ring to the appointment of an inspector and the cancellation of unpaid shares, he resumed his seat.

Judge Gowan, after making some remarks com-plimentary to the Society and the Directors, said that a good deal was remarked outside as to the Company, not as to its solvency, but as to the progress made, and these points he would like to bring before the Board. He had endeavored to understand something of the principle on which the Company acted, and any one who did so must know that it was established on the soundest, safest and most reliable principles, giving equal justice to the borrower and the lender. On the principles on which it was based, the returns would always be within a certain limit. The present position of the Company was, he believed, due partly to the low rate of interest, and partly to the length of time over which the loans ex-tended. But he desired to call attention to the fact that notwithstanding the great inducements held out by the Company its stock held a low po-sition in the money market. This was difficult to account for. And he would be happy to be informed how it was that a Company occupying an excellent financial position, so far as the basis on which it was founded was concerned, and being entitled to every confidence as to its manage-ment, had not succeeded better. Its stock stood at 25 to 27 per cent. discount even now. As to the character of the Company's investments, look-ing at the long period for repayment, extending over twenty-three or twenty-five years, it was ob-vious, he need hardly say, that first class security alone should be taken, both as regarded the title and value of the property. The investigations regarding title by the Company's Solicitor were, he had every reason to believe, satisfactorily con-ducted. He had heard complaints that the So-licitor had been too severe in scrutinising titles, but these very complaints were, to his mind, the highest praise which could be given that officer. Hence he was sorry to see that the Company had set a gentleman to work to see whether the So-licitors fees could be cut down or not. As to the valuation of property, the amount advanced being gradually repaid, the valuation had, undoubtedly to be placed at such a figure as to prevent the possibility of loss in the future. But in fixing such an amount it should be remembered that this was a new country. In the old country, where similar institutions were in existence, very little change took place in the value of property. For ages past, property there might be said to have continued worth a certain figure; so that the valuation of property was almost reduced to a certainty. But here, as a rule, property went on increasing in value; and, therefore, it might be a question here as to whether a larger margin might not be allowed in value. Such a course would, he believed, be in the interest of the bor-rower and of the Company. In this connection, also, he would say that to complete the design of the institution, the borrower should really take the debentures. But he was afraid that it was scarcely possible in the present condition of the country to expect men to take uncurrent funds for the current coin of the realm. Unless extra-ordinary inducements were thrown out to borrow-ers to accept these debentures as cash, they could not be got to take that which, to a certain extent, was held at a discount. He did not look for anything of the kind for years to come. But still he mentioned the matter as something which had been spoken about. He would mention also that he thought the directory excessively large. A feeling that this was the case was very wide-spread. His own experience of large directories was that it was very often more difficult to get a quorum with them than with a smaller number; and hence he would strongly recommend the Board to consider whether it would not be wise to apply to Parliament to reduce the number of Directors. It also occurred to him that frequent meetings of the whole body were to a certain ex-tent unnecessary. Monthly meetings of the directory ought to be sufficient. If three times in a week some one or more of the Board assisted the President to declare on all applications for loans—leaving in reserve to the general body any question thought proper, he thought it would be a great improvement and facilitate the working of the institution. Another matter which might very properly be dealt with, was the very ab-surd practice of appealing to the general meeting to say whether or not a dividend should be de-clared. To ask the shareholders to decide that point was really asking them to "go it blind." They were obliged to trust in the gentlemen hav-ing charge of the institution in the matter of dividend. Under the Act of Parliament he knew the matter had to be left to the general meeting, but it was a mere matter of form, and the sooner it was done away with the better. One branch of the business struck him as requiring the most careful management, in order to guard against loss. He referred to the deposit branch. They were authorised to receive $1 and upwards to $1,000 or $20,000—in fact to an unlimited amount. He could not understand how without much peril unlimited deposits could be taken sub-ject to call, or even one, two or three months notice. He did not profess to know much of the subject, but it struck him that the greatest care was required at every step, from the moment the money was received and deposit recipt granted

until the final stage. He would like to know if deposit receipts were signed when they were given.

The President—Yes, by one officer of the Company, and countersigned by the Cashier.

Judge Gowan thought that every such document should bear on it not merely the signature of some subordinate officer, but of some member of the directory,—say the President. On the whole the report to him, on the face of it, appeared satisfactory. But there were one or two inquiries which he would like to make. On the 31st December about 5½ per cent. of the annuities were unpaid. Since then that number had been reduced to about 2½ per cent. What proportion of these unpaid annuities were over a year due?

The Secretary replied that scarcely any were over a year due. They were chiefly for annuities due in November and December; and the amount was, undoubtedly, under $500.

Judge Gowan said he was going to inquire in what way the Company proposed to deal with irregularities of this kind, but as they did not amount to anything considerable, he would not press the point. As to the payments into the sinking fund, it occurred to him that 6 per cent. would scarcely allow much margin for management and for the necessary examination of titles in effecting loans. The next point to which he would direct attention was one suggested to him from more than one quarter, viz., as to whether the officers of the Company had given security; and if so, where that security was lodged.

The President—They have given security; it is lodged with me.

Judge Gowan would not press to know the amount, but as an indication of his opinion of what it ought to be, would state that some twenty persons held office in this county—clerks and bailiffs of Division Courts. They were required to give security for the faithful performance of their duty and the duly paying over of the public money coming into their hands. Their salaries ranged from $200 to $600 or $700, and the monies passing through the hands of each varied from $1,000 to $8,000 or $9,000 a year. Their securities ranged from $1,000 to $6,000 or $7,000; and they found no difficulty in giving such securities as in the interest of the public it had been thought necessary to require. He had further to state—and though it might appear ungracious of him to do so, yet, as the matter had been spoken of by outsiders, it might as well find utterance through him as any one else—he had to state that there was a very strong feeling that the staff employed for the management of the business was entirely too large. More work was done with a much smaller staff in any other institution in the town. He mentioned this as a proper subject for consideration by the directory. With the former large number of shareholders, he was aware that the correspondence was heavy; but, with the number greatly reduced of late, and the calls pretty well paid up, the labor of the office had been considerably reduced, and it appeared to him that now was the time to consider whether the staff could not be reduced. From the report, he observed that there had been no new sale of debentures in England, and that subject, he thought, ought to engage the attention of the directory. If maintaining their connection with England, for the sake of their debentures, involved a large expenditure, he would be disposed to discontinue it. But if, as he believed, it merely required a percentage to the broker, perhaps it need not be discontinued. With regard to the forfeitures, while he would not like to be severe on those not paying up, still, those who had paid up ought to be considered. Besides, the security of the debenture-holders was partly on that unpaid stock, and nothing ought to be allowed to weaken that security. All the security contemplated by the law the debenture-holders should receive. He thought that, under all the circumstances, the Directors would not be justified in longer withholding the action now invoked from the meeting. Directors should not occupy the position of Dean Swift's grand juryman, who,

> "Out of his great bounty,
> Built a bridge at the expense of the county."

The President replied. He thanked Judge Gowan for his favorable opinion of the Board of Directors, and went on to notice the queries of that gentleman. The principles on which the Company had been formed—that of lending on mortgage sums at a low rate of interest, and for long periods—would, in fact, account for the present value of the stock, as compared with other institutions. That was one of the reasons why the proprietors of the Company could not expect the same return as other institutions.

Judge Gowan—I spoke of the value of the stock—not of the return.

The President was aware of that; but still the value of the stock was always measured by the return. But less than a year ago, their stock had been sold at 42, now it was 75; and that, in six or eight months' time, was not a bad advance. With regard to the Solicitor's charges, the Board were happy to have the testimony of one so competent to judge as to the Solicitor's services. They knew and fully appreciated these services, but the value of them entered into the element of the loan. Other companies were reducing the fees allowed to valuators and solicitors, and in order that the Canada Landed Credit Company should occupy a fair position, the Directors felt bound to follow the general example. With regard to the amount of advance on property, that was settled by the Act, which sets forth that no advance shall be made unless the Company is first mortgagee, and that when made, the advance shall be only for half the cash value. As to the length of time to which the mortgage extended, it would be seen that very few took the long term. Since the commencement of the Company, the amount loaned on mortgage had been $539,450, whereas the amount due now was only $408,550, showing the amount paid up to be $130,900. As to the reduction of the quorum in the directory, it had occasionally appeared that a smaller number would be quite sufficient, and the suggestion of the Judge on that point deserved attention. With regard to deposits, he was happy to say that the greatest care was exercised. At the weekly meetings, a statement of the amount received was placed before the members of the Board present, and no time was lost in lending it out to the best advantage. If at any time the amount coming in should increase too rapidly, then orders were given to refuse further sums unless at a reduced rate of interest. Every care, he thought, was used to shield the interests of the Company in this respect.

Judge Gowan—There was a public announcement by the Company that sums under a certain amount, and deposited for a certain time, should draw so much interest, and that, on a regular given scale, interest would be allowed. If the Company held out that statement to the public and depositors in general, and failed to carry out their promises, would it not be a breach of faith?

The President—That order is good only till another is made.

Judge Gowan—Then the public will, of course, understand that according to the conditions of the market and the exigencies of the Company, so will the rate of interest be.

The President next noticed the large staff of the Company, and explained that the peculiar character of the Company's operations required more work than in ordinary offices of like description. The accounts were tolerably intricate, and so much was this felt to be the case that, with the view of obtaining the best system on which to continue the business, and probably lighten the labor, the Board had appointed an accountant, who had been acting as inspector, to examine the accounts, and see whether, in his judgment, a less intricate system might not be adopted. He had been in the office only a short time. But presently the Board hoped to be able to initiate a system requiring less labor, and there enable them to reduce the present staff. Wi regard to the sale of debentures in England, expense had been incurred there beyond adv tising. But that was a very serious item. Th found that two or three months's advertising some of the leading papers costs about £250 s This being the case, the Directors of late he fated to incur so large a liability for an uncert return. But he thought the time had now co when it might be for the benefit of the Compa to incur that expense or something like it. Fr present appearances, money was so low there th people might readily be induced to take the d bentures of the Company. Within a week th had been advised of £600 worth of debentur having been sold in that market at 6 per cent.

Hon. Wm. McMaster then addressed the me ing giving his views as to the points elicited the discussion.

Hon. G. W. Allan also spoke in reference various matters—commenting on the progr and position of the Company. The Report then adopted.

It was then moved by Mr. John Beard, seco ed by Mr. C. E. Chadwick, and resolved,—"Th the cordial thanks of this meeting be given to t President and Board of Directors for their dent and safe management of the Compan affairs."

The President returned thanks.

Mr. Arthur McDonald, seconded by Mr. J. Osborne, moved that, due notice having b given to all the shareholders of third call of per share being made on the 19th April, 18 and also that due notice having been given to said shareholders of the fourth call of $2 share, 14th March, 1866; and certain of the s shareholders having neglected to pay the amo of the said calls respectively, or the several ot calls which have since been made upon them, respect of the said shares, and such shares hav been declared by the directors forfeited, this g eral meeting of the Company hereby confirms s forfeiture, and order the said shares so forfeite be sold or otherwise disposed of.—Carried.

Moved by Mr. C. Tidey, seconded by Hon. A. Burnham, and resolved—That W. Williams and C. Robertson be appointed Auditors for ensuing year, and that their remuneration be each.

Moved by his Honor Judge Gowan, seconded Mr. H. Mortimer, and resolved—That, whe the Act of Incorporation of the Company requ the election of twelve Directors, and whereas i considered expedient to reduce the number of Board to eight members—Resolved, that the B be authorized, should they see fit, to submit to next half-yearly meeting of the Shareholde amendments to the said Act, with the view making such reduction in number of the B and such other amendments as they may cons desirable.

Mr. H. Mortimer in seconding the resolu explained that the advance in the Company's st was more apparent than real. The advance f 45 to 75 was almost wholly owing to the payn of calls that had been made, so that the s really stood now, relatively to the amount pai nearly the same point as at the beginning of year.

A letter was then read from the Hon. Ge Brown resigning his position as a Director.

Moved by Judge Gowan, seconded by Mr. riff Smith, and resolved, that the thanks of meeting be given to the Chairman for his able impartial conduct in the chair, and for his u ing zeal and attention to the general interest the Company.

The following gentlemen were subsequently clared elected Directors for 1869:—

Hon. G. W. Allan, C. S. Gzowski, J. W. McMaster, Samuel Sprenll, L. W. Sm Judge Gowan, John McDonald.

The meeting then adjourned.

THE RICHELIEU COMPANY.—The annual general meeting of the shareholders of this Company was held in Montreal pursuant to notice. After reading the report of the Directors and Auditors the following Board of Directors was elected for the current year:—Messrs. John Pratt, Wm. McNaughton, Z. Benoit, David Torrance, Adolphe Roy, Theodore Hart, Henry Starnes, Thomas Cramerhill and J. F. Lincennes.

Immediately after the meeting the new Board of Directors held a meeting, and elected the following officers:—President, John Pratt; Vice-President, Wm. McNaughton; General Agent, J. B. Lamere; Secretary-Treasurer, J. N. Beaudry; Assistant Secretary, A. Desforges.

BRANT INSURANCE COMPANY.—At the annual meeting of the County of Brant Farmers' Mutual Insurance Company, held in Paris, on Wednesday last, the following officers were elected for the year 1869:—President, H. Capron, Esq.; Secretary, James Maxwell, Esq; Directors, Messrs. J. O'Neil, Horace Capron, D. Anderson, Wm. Mullin, Wm. Moyle, Wm. Turnbull, John Tennant and M. Freeman.

Insurance.

FIRE RECORD.—Abereorn, County Brome, Q.—Store of Messrs. Holmes Bros., with contents; loss $500; insurance $3,000.

Peterborough, Feb. 10.—Shop of McWilliams, carriage builder; no insurance; cause unknown.

Township of Hope, Ont.—Barn of A. T. H. Williams, M.P.P., and occupied by Thos. Wilson; supposed to be the work of an incendiary; no insurance.

Carrick Township, Ont., Feb. 6.—The grist and saw mill owned by Wm. Murray, near Mildmay, in the township of Carrick, was totally destroyed by fire; the large water wheel being the only thing saved. Insurance $1000.

Brampton, Feb. 12.—A fire broke out here, by means of which the British Arms hotel, with adjacent exhibition hall and stables, and the residence and tailoring establishment of Mr. Crozier, were destroyed. The fire originated from some unknown cause in the hay loft over the stable. There were a number of valuable horses in the stable; but such was the rapidity with which the flames spread, that notwithstanding all that could be done to extricate them, three of the animals perished. All the buildings were of wood, except the hotel, which was a three story brick. Fortunately the night was very calm, else the fire would have been much more extensive, as the firemen were embarrassed from want of water. Loss about $,000. Mr. T. Graham, owner of the hotel, was insured for $2,800 in the Provincial and Commercial Union Insurance Companies, and Mr. J. H. Hannah, the occupant, for $1,000 in the Provincial. The furniture in the hotel was mostly saved. Two engines were brought to the scene, but owing to the bursting of the hose were rendered useless.

Goderich Township, Ont.—House of Robert Emerson, and contents; owing to the temporary absence of the mother, an infant child was consumed in the house.

Carleton, N. B. Feb. 3.—House of Mr. Joseph Wiley, in Queen Square. The fire broke out in the roof, and had gained such headway before it was discovered, that in less than an hour it was totally consumed. A portion of the furniture was saved. Mr. Wiley was insured for $800.

FIRES IN NEW YORK.—The Fire Marshal, in his report of the losses by fire during the month of January, values the destroyed property at $3,111, upon which the insurance amounted to $035,190. The number of conflagrations was 0, so that the average losses amount to little more than $2,000 per fire. In referring to the causes of disaster we find that one-tenth are attributable to defective flues, three to children playing with matches, five from the explosion of kerosene oil, and three from incendiarism.—*Insurance Journal.*

GRISWOLD'S ADJUSTMENT OF FIRE LOSSES.—One reason why we have not printed the numerous commendations of this valuable work, is, because we had not room for them all, and hardly knew where to begin a selection. We do not, however, hesitate to insert the following well deserved tributes to its merits:

Hon. William Barnes, in a letter to the author, says: "It is evidently a work of great merit and practical use. In the legal profession, it is said that each lawyer owes some contribution to its improvement and usefulness. You have paid your debt to the underwriting fraternity, in this well digested and aptly arranged volume."

H. S. Durand, the eminent adjuster for the Home Insurance Company, says: "I have read the 'Griswold on Adjustments,' and think it a very clear and practical work on the subject. Fifteen or twenty years ago I would have given $100 for such a book. Every agent should have it and read it carefully, and it would not hurt many so-called Adjusters to study it well."—*Monitor.*

—There is a rumour to the effect that the Guardian, which has made the requisite deposit, will confine its operations to Montreal.

MARINE INSURANCE IN ENGLAND.

Marine Insurance was practiced in England before it came into vogue in the northern portion of the continent of Europe; and even Antwerp, then in the meridian of its commercial eminence, derived it from English merchants. In 1560, Guicciardini states that the traders of England and the Netherlands "have fallen into a way of insuring their merchandise at sea by a joint contribution;" and we may, perhaps, assume with safety that about this period the practice became tolerably general in the commercial world of Europe.

By 1601, the amount of Marine Underwriting done on the London Exchange had become so considerable that an Act of Parliament was in that year passed for the establishment of a Court of Policies, to decide disputes arising out of those documents. For reasons which we need not now recount, this tribunal did not meet with success, and, although it was subsequently reorganized upon an improved basis in the reign of Charles II., it still failed of its object, and soon expired, never to be revived again.

Insurance was originally carried on in England, in Venice, and in maritime ports on the continent generally, by individual Underwriters. At first, their headquarters in London were on Lombard street, but afterwards, for their own convenience and that of the insured, they assembled at a certain coffee-house, which was opened in a yard off that street about the middle of the seventeenth century. In 1710 they transferred their place of meeting to another coffee-house, opened by a person named Lloyd, in Abchurch lane—and it is from this Lloyd that the body of English Marine Underwriters have since acquired that corporate name by which they are now known throughout the civilized world.

In 1720, the first two Insurance Companies—The London Assurance and the Royal Exchange Assurance—were incorporated. They owed their existence to the necessities of George I.; and the consideration on which they obtained their charters was the promise, eventually only half fulfilled, to pay His Majesty the sum of £600,000. Established in the year of the South Sea mania, the stock of these two Companies soon rose to an extravagant premium, but, when the financial bubble burst, it fell more rapidly than it had risen, and from that circumstance, and an accumulation of disasters at sea, they were for a time involved in very serious difficulties. Eventually, however, these were surmounted, and for more than a hundred years these companies succeeded in maintaining their exclusive privileges as the only Insurance Companies sanctioned or permitted by law. It required more than fourteen years' agitation to convince Parliament of the impolicy of continuing this monopoly.

In 1810 the New Insurance Company was formed, with an authorized capital of £5,000,000 sterling, and Parliament was appealed to to remove the restrictions which prevented its commencing business. After a long and elaborate inquiry into the subject, a Committee of the House of Commons reported that the exclusive privileges of the two great Companies should be repealed, and that encouragement should be given to other associations for the promotion of Marine Insurance. The influence of the monopolists so protracted the contest that it was not until 1824 that Marine Insurance was thrown open, like Fire and Life Insurance, to joint-stock enterprise and energy. To those unacquainted with English commercial history, the folly of Parliament in so long maintaining these restrictions may occasion some surprise. But this is in keeping with the tenor of their entire legislation down to a very recent period. Every trade, industry and mercantile enterprise has had in turn to struggle for life against the obstinacy of rulers who are not even yet disabused of the idea that they know better than traders what is best for trade.

From 1824, the number of English Marine Insurance Companies has steadily increased with the augmenting business offered them by expanding trade. Liverpool and Glasgow have long possessed Underwriters' rooms, and transacted a large amount of business. Yet the enormous export and import trade of Lancashire did not lead, until recently, to the establishment of any independent Marine Insurance Companies, either there or at Manchester. Lately, two or three offices have been opened there, and that thriving city, Bristol, has also attempted to attract Marine Insurance business to itself. Yet in all these places the business of insurance seems to exist as an exotic, having its true habitat in the metropolis of the Empire. There are in London, at the present time, upwards of twenty proprietary Marine Insurance Companies, besides several Mutual Associations, which extend their operations, in a smaller degree to the protection of freights and profits. The aggregate number of members and subscribers to Lloyd's is somewhat above 1,500, of whom 400 are Underwriting members.—*Chicago Chronicle.*

Railway News.

GREAT WESTERN RAILWAY.—Traffic for week ending January 29, 1869.

ATLANTIC AND ST. LAWRENCE RAILROAD.—The Railway Commissioners of Maine have recently reported the condition of the Atlantic and St. Lawrence leased to the Grand Trunk. They say the road has been worn out and not enough pains have been taken to repair it. In October an application was made to the Courts and an injunction issued requiring the Company to lessen the speed of its trains and forward repairs. Between that time and November 500 tons of new rails were laid upon the Maine portion, but the road still demands further repairs.

THURSDAY, FEBRUARY 18, 1869.

NEEDED LEGISLATION IN SHIPPING MATTERS.

Some time ago we pointed out the great loss sustained by shipowners, and the peril occasioned to life from the absence of due provision in the laws of the Dominion for the regulation of matters connected with shipping. Among other matters, we explained the necessity for an examination into the qualifications of lake captains, and the granting of certificates of capability; for a proper investigation of circumstances attendant upon the loss or damage of vessels on the lakes; for the signing of articles by seamen; and generally for such statutory enactments as would change a state of affairs, on all hands regarded as mischievous and productive of great pecuniary loss. In the last official returns respecting Canadian shipping, the tonnage of Ontario was set down at 66,959, and its value $2,787,800; that of Quebec at 155,690, and its value, $4,633,945. An interest so large and of such importance is certainly deserving of attention from our legislators. In the year 1868, there were 1272 disasters on the lakes, involving the loss of an immense amount of property and a fearful sacrifice of life. In one season, 1865, the direct and ascertained losses reached $400,000.

It is of importance, therefore, to ascertain, if possible, if this waste of property cannot be stopped, and whether means cannot be taken to prevent its annual recurrence. Of course the elements cannot be controlled by Act of Parliament, nor can accidents be prevented by Committees of inquiry. But when we come to think how many of these marine disasters are attributable to want of skill on the part of navigators, and, in only too many instances, to gross carelessness, we can imagine the reformation that is needed and can be effected. Vessels are often run ashore intentionally, and no investigation ensues. The insurance money is obtained and the "accident," is allowed to pass unimproved. If masters were compelled to pass an examination before property and life would be placed in their care, or would be subjected to suspension or deprivation by a competent tribunal, we should have fewer cases in which the most ordinary precautions to guard against danger are neglected and consequently fewer losses.

As the law is at present, a seaman may leave his vessel at the very moment he is wanted; if the vessel be stranded he may discharge himself and refuse to work except at extravagant wages. There is no power to detain a foreign vessel in Canadian ports until she gives security for damage that she may have done. A great many other points might be gone over, all leading to the same conclusion, but it is not necessary to give them in detail, the absurdity of our present position in these matters being only too apparent.

In the Province of Quebec, the Imperial Shipping Act of 1854, can be pleaded so far as its provisions are applicable, but in Ontario, the same thing cannot be done. What we need is the machinery provided by that Act for carrying out its objects. It is the duty of the Government as it is the direct interest of our shipowners and marine insurance companies to have proper legislative remedies applied to the evils pointed out. All that is required to secure them is united and energetic action. Certainly, a Dominion claiming to be the fourth maritime power in the world should not occupy the absurd position in respect to shipping laws that we find ourselves in, more especially when we find our neighbors across the lines so well off in this particular. Our Boards of Trade had better give this subject their careful consideration.

CANADA LANDED CREDIT COMPANY.

The speech made by Judge Gowan at the annual meeting of this Company, which, by the way, was specially reported for this Journal, reflects credit on his manliness and on his honesty. As a stockholder, he thought it expedient to examine into charges passed from month to month respecting the management of the Company's affairs, and did not hesitate to come out boldly at a proper time and place and ask to be satisfied respecting them. The system of smothering dissatisfaction leads to no good and it is always best where doubts are entertained, or evils suspected, to let inquiry have full play. The stock of the Company was at a considerable discount, reasons were given for this by brokers when the stock came to be sold, as one interested in the prosperity of Company, Judge Gowan naturally asked self and just as naturally asked the B why such was the case.

From what we know of the Compan are inclined to think that its troubles l arisen from errors in management. Board has been too large. The Ca Permanent Building Society, the la societyin the country has a Board of e and the Western Canada Building Soc one of the youngest and yet one of most prosperous societies, has a Boar seven members. Surely the Canada La Credit Company could do with less than teen. The meeting did right in decidi reduce the number. In such institution work is done or should be done by the P ident and the Secretary, and too lar Board is only an impediment to business. fancy the Board has been so large that was everybody's business was nobody's l ness and errors passed unnoticed. Wh moneyed institution is mismanaged we always disposed to blame the Secretar Manager in the first place and the Boa the second, the former for doing wrong the latter for permitting it to be done. history of the Canada Landed Credit C pany is characterized by not a few blun It has an excellent charter and sh have been just as successful as our most cessful Companies. But it was a great take to rely on England for its money. expense incurred in advertising there advertisement cost £250 stg.), the fe brokers, the expenses of the secretary there, made up a considerable sum. purchase of exchange to pay interest in land is an item also not to be overlooked has the effect of increasing the first cost. the price paid for the money that is lo out in Canada was rendered dear, and can imagine how small a margin was le profit. The result is that expenses sw up profits and place the Company in a d vantageous position in competing with si institutions which obtain money at less and manage their affairs with more econ

These considerations have impressed t selves on the Board of Directors, and seems to be a determination to inaugur new era in the Company's history. A beginning has been made, and we hav son to expect a more flourishing sta affairs. The Board is made up of hono and able men, and the Company is thoro sound. It requires but a little care judgment to regain public confidence, for awakening those concerned to a sen what reforms are needed, the stockh are greatly indebted to the efforts of J Gowan.

BEET ROOT SUGAR.

In a previous number we gave some statistics as to the cost of producing Beet Root Sugar and the returns that would be realized from it.

We now refer to the best mode of raising the beet, and the different methods by which it is converted into sugar.

It is well known that beets will grow in any part of the temperate zone, and the primary question is the best kind of soil to employ. It should be a light rich loam, inclining to sand rather than sand. Care should be taken in the application of manure, lest the juice be rendered impure and the proportion of fermenting matter be increased. The best variety of beets is the white Silesian, as it contains the greatest amount of saccharine matter, they should not be forced as the medium size yield most sweet juice. Our farmers will well understand the best mode of planting and harvesting the crop. Roots may be kept in shallow ditches dug in sandy soil; but there is danger of their passing into the non-crystalline variety. In Germany, the roots are usually stored in large cellars under the factory. The leaf stalks and roots are removed as soon as the plant is gathered. When the roots are to be used, the bruised, decayed and mouldy parts are to be cut away lest the juice may be injured; the bulbs are washed in a large revolving drum, formed of bars or bars of wood partly immersed in water, this gets them clear of sand and dirt. So much for the preparation of beet roots preparatory to the process of manufacture, which we now give:

Beets contain some 9 to 10 parts of sugar. The first process in obtaining which, is to grind up the beets so as to destroy the cellular parts; the pulp thus obtained is subjected to powerful presses in order to extract the saccharine matter. By means of sulphuric acid or chalk the juice is then cleared; after that it is forced through canvas bags, to such a time that no residuum or impurities are left; when this process of filteration is completed, the next proceeding is that of evaporation, which is performed by boiling the juice in large chaldrons. When the liquid has obtained a certain thickness some sulpuric acid is added, until there is a slight alkalic reaction. However, the employment of sulphuric acid must be with the greatest caution, as it tends to prevent the sugar crystalising. The next process is to pour the boiling juice through flannels, in which the non-saccharine parts are then filtered in large pans. The result is a thick syrup of good taste. This syrup has now to be filtered through charcoal, after which it is mixed with chalk water, to which is added the white of eggs; after this the syrup becomes somewhat alkalic, when it is steamed off in copper pans, carefully skimming off all impurities. After about an hour and a half boiling the syrup is tested by taking out a small quantity in a spoon and blowing upon it; should it break rapidly into bubbles, it is put into forms, previously damped; it has then to be stirred to prevent crystallisation, and the forms are kept in a warm room for some time in order to let the molasses drain. This completes the process of making raw sugar. The process of refining is identically the same as that employed in our own refineries.

We give a new process for which a patent has recently been taken out in Austria. The following is a literal translation from a German scientific paper:—"A revolution is confidently announced in the manufacture of sugar from cane and beet-root. The *extended diffusion process* of a large beet sugar manufactory in Austria, dispenses with nearly the whole expenses of grinding, crushing and pressing, and claims to yield more and purer sugar. The cane or root is finely sliced by machinery, adapted with care to avoid crushing the cellular structure, and thus liberating the albumen and other elements, which usually mingle impurities in the product. The material is then repeatedly soaked in water at a certain temperature until the saccharine juice is approximately washed out, when the solid remainder (if roots) is in a wholesome condition for feeding to animals. A battery of six or eight vats is arranged in a circular series, connected by stop-cock pipes, and filled with the sliced material, and watered in due proportions. After standing a certain time, the liquid in the first vat is drawn off into the second and replaced with pure water; after another interval, the second is emptied into the third and re-filled again from the first, and so on, until from the last vat is drawn an infusion eight times enriched and nearly equal to the juice of the plant. Pure water is put in its place, which goes then to the first vat (by this time replenished with fresh material) and thus the circuit of operation is made continuous, each vat in turn discharging the concentrated juice and receiving pure water, but each in turn replenished after eight infusions with fresh material."

The manufacturer who invented this process uses up two hundred tons of beets every twenty-four hours, only employing fifteen men, who could just as well manage twice the quantity. By this process the expensive machinery for crushing and pulping is done away with. The mode in treating the juice is the same as before narrated.

INTERCOLONIAL RAILWAY.

On the 8th instant, the Railway Commissioners opened the tenders for the four sections of the Intercolonial Railroad. Two hundred and forty-seven tenders were received. For the first section the amounts varied from $175,000, or at the rate of $8,700 per mile to $700,000 or $35,000 per mile. For the second section, the lowest tender was for the sum of $299,000 or $14,950 per mile to $820,000 or $41,000 per mile. The lowest tender for the third section was $288,000 or $12,000 per mile and the highest $792,000 or $33,500 per mile. For the fourth section, the lowest tender was $297,000 or $11,000 per mile, and the highest $918,000 or $34,000 per mile. The successful contractors were, first section, H. H. Horsey & Co., of Ottawa; second section, G. & J. Worthington, of Quebec; third section, Elliott, Grant & Whitehead, of Brantford; fourth section, G. & J. Worthington, of Quebec. It appears to be admitted on all hands that the work will be done at a very low figure, if the successful contractors abide by their tenders. The manner in which the whole business has been managed, shows that the prophesied "huge job" has not as yet shewn its head.

—We understand that the deposit by the Ætna of Dublin is held by the Government as forfeit, the Company having failed to comply with the provisions of the Insurance Act. The securities held by way of deposit are lying in England. When the Government is in a position to sell the securities, the proceeds will be handed to the Court of Chancery for distribution among the creditors. Under the present Act, the securities could be sold at once as they would be held in the name of the Receiver-General in trust.

Owing to the delay of eastern mails we are without our usual advices of the Quebec stock and money market.

FROM THE WEST TO THE SEABOARD.—Dr. Barrett, of Upper Canada College, proposes that some point on James' Bay, say Moose Fort, be made a seaport for the Province of Ontario. The route between Michipicoten on Lake Superior and Moose Fort might be rendered practicable by the improvement of their natural water courses—a canal of three miles would connect the Michipicoten and Moose rivers. The distance from the mouth of the Clyde to Moose Fort is 3,150 miles, and from Moose Fort to Michipicoten 220; total 3,370 miles. The distance from the Clyde to Quebec is about 2,500, and from Quebec to Michipicoten 1,100; total 3,600 miles.

The Hudson Bay is free from storms. The route mentioned would afford facilities for the transport of the mineral products of the region about Lakes Superior and Huron to the smelting works of England; for the shipment of the cereals of Western Prairies and the Red River territory; and give Ontario a means of communication with the seaboard wholly through British territory.

Communications.

HURON AND ONTARIO SHIP CANAL.

To the Editor of the Monetary Times.

Sir,—In an article in your last issue you slightly misapprehend the meanings I intended to convey in a published letter from which you quote. The argument founded on that quotation, therefore, takes a different line from what it must have followed, but for the misapprehension. What I intended to convey was this: that the construction of the Canal would involve an outlay of forty millions of dollars; and that the amount is larger than the whole banking capital of the Dominion. But I never intended to assume, as you seem to conceive, that this was the same thing as adding so much to the banking capital of the country.—The capital, as you rightly state, in what you consider the correction of an error, into which I must plead that I did not fall, would be spent on the construction of the Canal; and there is no difference in your view and mine, when you state that we should get, besides the Canal, for the money whatever is saved out of the forty millions by those to whom it is paid.

What I was anxious to enforce was the vast amount of labor the forty millions would set in motion, enabling laborers to make corresponding purchases, on which all, with whom they dealt, would make profits, in which view, I am glad to find, you so fully agree.

But while I do not wish to lose sight of this point, I have always placed infinitely more stress upon the benefits which the Canal would confer, alike, as a source of productive investment, as a means of cheapening freights from the great West of the United States, as well as the greater and more distant Northwest of our own Dominion.

In the hope that this explanation will find insertion in your next issue,

I am, yours obdt.,

Fred. C. Capreol.

Toronto, Feb. 17, 1869.

BANK MANAGERS AND INSURANCE COMPANIES.

To the Editor of the Monetary Times.

Sir,—I trust it will not be considered out of place if I venture through your columns to offer a few remarks upon what I consider to be a most unjust exaction, which is practised upon insurance companies throughout our city, the discountenancing and suppression of which I think demands the attention of insurers generally.

For some time there has been, as I conceive, a just complaint that prevailing rates are inadequate to the risks borne; excessive competition, combined with the too prevalent practice by many of pitting one company against another, have from year to year tended so to reduce rates, that as some of our oldest local insurance authorities aver, it is extremely difficult to prosecute the business with even ordinary hopes of success; yet with all the cutting and competition with which we have to contend, and when rates have, as it is fancied, been reduced to the lowest possible figure compatible with safety, we are expected upon being tendered our premiums to make a still further reduction, by conferring a *douceur* of 10 per cent., by way of brokerage or commission.

Against those following the business of professional brokers I have nothing to say; they have a living to make; they probably induce many to insure who otherwise would not trouble themselves about the matter, and if they can by any means control a portion of the business, they have an unquestionable right to do so. Against merchants, bank agents and managers, however, who so far lower the dignity of their position and standing as to indulge in the system of peculation on the profits of insurance companies, I earnestly protest. The extent to which this species of respectable blackmail is levied in Toronto will scarcely be credited, excepting by those who suffer from its imposition; but I have it on the best authority, and indeed my own experience justifies the assertion, that during the past year a gentleman in comparatively high standing, as agent or manager of one of our banking institutions, actually doubled, perhaps trebled his salary by commissions received from insurance companies on business, which, from his position, he had in his control. The premiums on policies which had been running for years in certain offices, have been sent at time of renewal less 10 per cent., and if the deduction has been remonstrated against, the companies concerned have been coolly informed that if they don't choose to renew the policy on these terms the risk will be removed.

The *modus operandi* appears to be as follows: Messrs. A. B. & Co., who keep a respectable account at the bank, if not requiring favors of a more substantial character; are, as is usual with merchants, occasionally in want of a bill of exchange on London or New York, in which case it is courteously intimated by the obliging Manager—in which intimation is possibly included the saving of an eighth or quarter per cent. on the exchange operation—that the placing of their policies of assurance in his hands will be considered a favor. Do Messrs. C. D. & Co. stand in need of a little help to tide over a difficulty? Again the obliging Manager steps forward, but in this case it is made a *sine qua non* that all policies of assurance be deposited with the bank, ostensibly for the purpose of seeing that they be properly kept up, in reality to help the manager to feather his nest by means, which if not dishonest, are, to say the least dishonorable. I would, if necessary, point to individual cases where the entire insurance business of large firms is controlled in the manner I have described. How far this is sanctioned by the principals of these institutions on the part of their subordinates remains to be seen. I think, however, there are one or two very suggestive as well very objectionable features about such a course of procedure deserving their consideration.

I fear, Mr. Editor, that I am trespassing on your valuable space by the length of my communication as, however, it is a matter of some interest, I must ask your indulgence.

Truly yours,

Insurer.

Toronto, 16th Feb., 1869.

THE EXPORT OF CANADIAN PETROLEUM.

Editor of the Canadian Monetary Times.

Sir,—In a former number of your valuable paper I showed the profit which would result from the exportation of Canadian petroleum, and those calculations were based upon what was then the price of refined oil in England, but the present state of the market is far more favorable to the exporter, as the prices have since advanced nearly 33 per cent. The quotations in Liverpool and London during the month of September last averaged 1s. 6d. per gallon for standard white, now the same article is quoted firm at 1s. 11½d. At the former figure it was demonstrated that a profit of $5 a barrel might be made by the exporter, provided he obtained the oil from his own wells and refined it himself, but now with the increased price a clean profit of $8.50 per barrel might be made under the same circumstances.

The whole cost of producing the oil, refining it and laying it down in Liverpool, after allowing for all reasonable contingencies, need not exceed $7 a barrel, and at the present price, its value there would be $15.50. Such heavy profits are shown in this business that there is little doubt, during the present year, the export of Canadian oil will assume considerable importance; indeed, it is wonderful that so profitable a source of commerce should so long have been neglected and left entirely in the hands of the Americans. Although the results of the shipmants last fall have been made public, there is no doubt the exp[orts] ments were highly successful when prop[erly] managed.

From the want of statistics in our own co[untry] we are compelled to draw our inferences from [the] oil trade of the States. The total export from [the] United States for 1868 was nearly 99 millions [of] gallons, against 67 millions in 1867, an incr[ease] of more than 47 per cent. The home consump[tion] of the United States is much larger, when c[om]pared with the extent of their oil territory, t[han] the consumption of Canada as compared with [the] oil districts. Hence there is not relatively [so] much need for export from the United State[s] from Canada, for their own population of ne[arly] 40 millions does of itself support a very l[arge] trade in oil, whereas the 4 millions of people [in] Canada are soon supplied and the market glut[s].

The Americans, however, have been the fir[st] establish the export trade of petrolcum, wh[ich] during the past year has so grsatly increased, [and] which has now assumed such large proporti[ons] while the export of oil from Canada is ha[rdly] worth mentioning. The location of our oil w[ells] is much more favorable for export purposes t[han] any of the American oil districts. Petrolia [the] chief producing territory) is only 18 miles dis[tant] by rail from Sarnia, whence oil can be ship[ped] direct to Europe without breaking bulk. W[e] are with us a great deal lower, and the produc[tion] and refining of oil could be effected much che[aper] here than in the States. All the natural [ad]vantages are in our favour; the oil is there, [the] means of transportation is easy, nothing is w[an]ting but the application of energy and capital, [and] nevertheless, our neighbours carry off the p[rize] and in Europe a Canadian exporter of oil is al[most] unknown.

It is to be hoped, then, that our oil men wil[l] longer remain inactive, but will energetically [take] this matter in hand, and thereby benefit [the] country and reap the large profits which so su[rely] await them.

Yours, &c.,

Petroli[a]

Nova Scotia, February 15, 1869.

Mining.

NOVA SCOTIA GOLD FIELDS.

(From our own Correspondent).

Halifax, Feb. 3, 186[9]

Compared with last year the season is extre[mely] dull. In actual mining there is but little [pro]gress, and speculation in stocks and land is [com]paratively at a stand still. The establishme[nt] a Mining Exchange is again on the *tapis*, and [the] project is this time likely to be carried out, as [the] Haligonians are all interested in keeping up [the] excitement in regard to their gold mines. He[re], too, are still entertained of bringing in Br[itish] capital soon, and another month or so [will] prove upon what basis those hopes are foun[ded]. There is yet a large field for profitable in[vest]ment in Nova Scotia, but the stock job[bing] operations of last year by which undevel[oped] mining territory—in some cases dear at the [price] of wilderness land—was traded off to the publ[ic] five hundred to five thousand dollars per [acre] cannot be repeated even in England. The p[rop]erties for which negotiations have been opene[d] the Westlake, Imperial, Queen, and Bruns[wick] blocks at Uniacke, and the Caledonia at Oldh[am]. Overtures are said to have been made, also, fo[r] acquisition of the Mount Uniacke Comp[any].

ms at Uniacke, but as two-thirds of the stock wned in Boston, and the property is the most dily producing one in the district, the trans- is at present doubtful.

The Mines Department returns for the last rter of 1868 are complete with the exception those from Lawrencetown; but allowing 200 as the probable quantity produced in that rict from 1st October to the end of December, 100 tons as the amount of quartz raised, we e the following results for the year 1868 for whole Province:

ABSTRACT OF RETURNS FROM JANUARY 1 TO DECEMBER 31, 1868.

District.	Total Gold Yield. oz. dwt. gr.	Quartz Crushed. tons. cwt.	Aver. Daily No. of Miners.
Sherbrooke	7,070 0 5	9,880 4	190 10-12
Renfrew	3,373 14 9	5,994 5	126 11-12
Uniacke	3,247 3 17	3,874 15	89 5-12
Waverley	2,387 8 22	6,372 0	118 6-12
Wine Harbor	1,232 14 5	2,938 11	74 3-12
Tangier	921 8 9	725 5	37 6-12
Clam	779 0 4	1,011 13	25 8-12
Isaac's Harb'r	673 2 17	596 5	46 8-12
Montague	584 14 22	350 0	24 10-12
Lawrencetown	419 8 17	395 0	29 4-12
Unproclaimed	44 4 15	136 0	15 8-12
Total	20,733 0 22	32,273 18	779 6-12

)—Includes 15 dwts. alluvial gold.
)—Includes 18 ozs. alluvial gold.
)—Includes 15 dwts. 12 grs. alluvial gold.
)—Includes 3 ozs. 9 dwt. 4 grs. alluvial gold.

In many respects these results resemble the r 1864. The total gold yield is 6,000 ozs. less n in 1867, and 5,000 ozs. less than the two ceding years, 1866 and 1865. The average rly proportion per man is 26 ozs. 11 dwts. 23 , or $531.95 specie. The average per ton itish) 14 dwts. 9 grs. or 12 dwts. 20 grs. per Colonial. Sherbrooke produced at the rate of lwts. 0·7 grains per British ton, and $741 per n. Uniacke averaged 18 dwts. 19·5 grains, $726.30 per man. Tangier appears to have en the highest proportional yield for the ount of ore reduced and labor employed; but t returns were obtained so late that even the culations now submitted will extend this letter ond limits, and, perhaps prevent its despatch this morning's mail. The reasons for the eral falling off, and other interesting references, st be deferred then until next week.

The following notes refer to present progress:

UNIACKE.—The works of the *Queen Company* e been closed, pending negotiations with glish speculators. The *Uniacke Company* have en over three ozs. of specimens from a new e struck in the cross-cut. The *Montreal mpany* are making satisfactory progress.

WAVERLEY.—All work here at present is car- l on by tribute. During the last fortnight of uary three tributers earned $80, which speaks l for the quality of the ore.

RENFREW.—The mill of the *Colonial Company* h been started. The *Ophir Company* is re- sented in the bullion report.

MUSQUODOBOIS.—Two mills are being erected this district, one of five stamps for Barnett & , and one of ten stamps for Mr. Buckner.

DISCOVERIES.—A discovery is reported from lburne, but the precise locality is not yet own. It is very certain that the Western dis- ts this year will receive some attention from e lorers.

BULLION REPORT.

Messrs. Huse & Lowell, bankers, received the owing amount of bar gold between 11th and 3t January:

Co.	District.	ozs.	dwts.	grs.
Millington	Sherbrooke	181	19	0
Emerston	Sherbrooke	56	11	10
N.Y. & Sherbrooke	Sherbrooke	27	11	12
Eaton & Nova Scotia	Waverley	36	16	7
Clair	Renfrew	118	19	0
Colorado	Wine Harbor	27	2	9
Uiacke Co.	Uniacke	135	19	6
Total		584	18	20

THE GALWAY LEAD MINE.

To the Editor of the Monetary Times.

DEAR SIR,—It may be interesting to some of your readers, to know something of the operations and prospects of this Mine, and with the view of giving some information on the subject, I send you the following:—

The Capital Stock of the Company, amounts to $20,000; about half of which is paid up. The balance will be called in as required to furnish smelting works, &c.

The Directors have declared a dividend at the rate of thirty per cent. per annum, on the paid up capital for the six months the Company has been in operation.

It is especially interesting to know that this dividend is the proceeds of sales of Ore obtained in sinking the shaft, and only a portion of which is sold. This is the first mine in Ontario to declare a dividend fairly earned, and is I believe the largest ever declared by any Mining Company in the Dominion, at least, that I have seen any account of.

The Company own fifty acres of land surrounding the Mine, through which several veins run other than that now working, some of which have been pronounced by competent judges quite as good as that. The work is kept going day and night, and is under the management of a competent miner from "Cumberland," England, who brings to his work thirty years experience.

The shaft is down ninety-five feet, is 10 x 6 feet, covered by a substantial building, having all the necessary arrangements to enable the men to work to advantage and with comfort.

The Company intend to erect smelting works in the Spring, and make some other necessary improvements. From the favourable situation of this Mine, being on the Bobcaygeon Road, and only distant from navigation at Bobcaygeon, ten miles; it is but reasonable to expect good results, and that the enterprising men who have shewn so much energy and spirit in pushing it to its present position, will be amply rewarded for their outlay and perseverance.

For a particular and scientific description of the Mine, &c., I refer you to a report made by Professor Chapman last September, a copy of which I send herewith.

Hoping I have not trespassed too much on your space.

I am Sir, &c.,

PETERBORO.

Peterboro, Feb. 15, 1869.

SUSSEX (N. B.) MANGANESE MINE.—This property has been taken possession of by the Sheriff of King's at the suit of the Treasurer of the Company owning it, for moneys due him. There have been ten men at work in the mine all winter, and these are still employed. The Company have spent about $60,000 on their property, and the mine is now in fine condition. It is not probable that there will be any interruption of operations at present, or that the Company's interests will be more than temporarily affected.

GALWAY MINING COMPANY.—This company being free from debt, and having sold a portion of their ore, have declared a dividend at the rate of 30 per cent. per annum on the capital paid in. This shows that notwithstanding the numerous failures of gold mining in Madoc, we have other mines in Canada that will pay. There is every reason to look for large results from this enterprise, if the Directors continue to manage it as economically as they have done.—*Peterborough Review.*

— Henry Brethour, Deputy Reeve of Brock Township, has been appointed Trustee of the Township bonuses, on behalf of the Municipalities of York, Ontario and Victoria, as provided by the Act of incorporation of the Toronto and Nipissing Railway Company.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

A good business was done in stocks during the past week.

Bank Stock—Quotations have remained steady, with the exception of Royal Canadian, which has advanced about 3 per cent. There were small sales of Montreal at 139 and 139½; a limited amount is now offered at the latter rate. No British in market; the last sales were at 104. Ontario has been freely dealt in during the week at 100⅛, 100¼ and 100; there were sellers at par at the close. Large sales of Toronto were made at 122, 121½ and 121; these high prices have brought numerous sellers into market, and buyers have reduced their offers to 121. Royal Canadian is 3 per cent. higher; there were sales in the early part of the week at 87½ and 88, and to-day (the 16th) large sales took place at 90½ and 91, and a small sale occurred at 91¼. Commerce sold at 102½, 102¾ and 103; there are now buyers to a limited extent at 103 and sellers at 103¼. Gore has declined, with buyers at 40 and sellers at 42. There are buyers of Merchants' at 108¼ and sellers at 108¾; very little in market. Quebec could be placed at 99½; nothing doing. Molson's is in good demand at 110½ and 111; sellers ask 111½. City is wanted at 102¾ to 103, a small sale occurred at the latter rate. Buyers offer 109¼ for Du Peuple, without sellers. No transactions in Nationale for some time past; buyers would give 106½. Jacques Cartier is held at 109, with buyers at 108½. Union could be placed at 103, but there are no sellers. Other banks nominal.

Debentures—Canada sterling 5 and 6 per cents. are offering at our quotations. Dominion stock

is in great demand at 105½. Toronto are eagerly sought for at rates to pay about 6¾ per cent. interest. No County in market; they would be readily taken at par.

Sundries—Limited sales of Canada Permanent Building Society were made at 124½ and 125; there are buyers at the latter rate, but very little offering. Western Canada Building Society sold at 119 to 119½, and is in active demand at these quotations, but the supply is very limited. Several transactions occurred in Freehold Building Society at 109½, which rate is freely offered. There are buyers of City Gas at 107¼ and 108; none in market. British-America Assurance is heavy at 54½ to 55. Buyers would give 133 for Montreal Telegraph, but sellers ask 134. There are buyers of Canada Landed Credit at 74, with sellers at 75. Mortgages have been in good demand, with few offering. There is a fair demand for money.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Feb. 14, 1869.

The weather during the week has been very variable. Never within the memory of the "oldest inhabitant" has so much snow fallen as during this winter. In many of our streets it has been four to five feet deep, and some of the principal streets are blockaded by the snow sleighs of the contractors employed in removing it. Business is almost at a standstill.

We have had one large failure in the produce trade, Buck, Robertson & Co. They were about the largest dealers in cheese and butter. Mr. Robertson does not live here, and Mr. Buck has left town for parts unknown. What the liabilities are is not yet ascertained. Joseph May, in the dry goods trade, has also gone down. There are one or two smaller failures. There are rumours, of course, of other firms, but such reports are very injurious, and often so seriously hurt the credit of a firm as, in some instances to bring it down, when it might otherwise have floated over. John Rhynas, doing a considerable business with the lower ports, and agent for the Portland Kerosene Oil Works, has also failed. These two last failures have not been so much from bad debts as from the impossibility of making sales so as to get in either money or bills to enable them to take up their accceptances.

For the proceedings of the past week I have very little to record. Our flour market is very dull, with a downward tendency. Stock on hand to-day 90,500 brls. against 67,500 same date last year. Prices are nominal. No transactions in any description of grain. Provisions share the same fate with the exception of mess pork, which is saleable, but firmly held rather above the ideas of buyers. Groceries are dull with the exception of raw sugars. Owing to the disturbances in Cuba, especially in the sugar districts, a speculative feeling has sprung up, and the market is firm with an upward tendency.

Toronto Market.

GROCERIES.—*Sugar*—The market has been much excited for a week past. Influenced by the news of an insurrection in Cuba holders of sugar have rapidly advanced their prices, and with a good speculative demand large sales were made in all the principal markets. So sharp has been the upward movement that in a single day refinery sugars rose 50 cents, and since the beginning of the week about 75c. to $1.25 per 100 pounds on Muscovadoes. Starting at 8¼c. they have risen to 9½ and 9¾c. in lots. On white sugars the advance amounted to $1.50 to $2 per 100 lbs. The refiners in Montreal have bought largely; in fact the business done in the various markets is quite unprecedented; as is also the rise in prices which led to it. Sales and resales of refined sugar in Toronto are estimated for the week at 3,000 bbls., within the range of prices quoted. The market is now more steady at our quotations. Buyers for some of our houses are now in Cuba. If they were so fortunate as to secure stocks before the rise the profits will be something handsome. *Teas*—There is a good business doing in teas at steady prices. There is a general opinion that the new crop teas received are inferior in quality to last season's. The market is firm and demand good for grades between 40 and 50c and between 55 and 65c particularly for greens. Fine grades of uncolored Japan are in good demand. Good values in Twankays at 42 to 46c are of ready sale. *Syrups*—Have advanced from 5 to 7c per gallon in sympathy with sugar. *Molasses*—The market has not sympathized with the sugar market to any noticeable extent; prices are steady. The feeling is firm, but the large stocks of low grade syrups held in the American markets prevents any advance for the present. *Fruit*—We note an active business in the New York market for almonds, which is owing to the state of the weather in France and Spain bringing the crop forward prematurely, and rendering it almost certain to be destroyed by the frosts which must ensue. *Tobacco*—Is firm and unchanged. *Coffees*—Are also firm. *Rice*—Is inquired for, and prices favor buyers.

GRAIN.—*Wheat.*—Receipts 40,492 bush., and 46,799 bush. last week. There is a limited demand for spring at 98c., and car loads are now selling at that price. There is a firmer feeling than existed at the date of our last report. Sales reported were four cars at 98c. in store, 7,500 bush. at $1 in store. Fall is very dull, under large receipts and a light demand. The general quality offering is rather inferior; there are no buyers over $1 for good samples; sales 5,000 bush. at $1 in store. The stock of wheat in the Toronto warehouses on tha 15th inst., was 95,554 bush. fall, and 87,178 bush. of spring, against 49,703 bushs. of fall, and 37,849 bushs. spring, on the 30th January. *Barley*—Receipts trifling; the market is firm at qnotations; no sales. Stock in store on the 15th inst. 66,375 bushs., and 70,853 on the 30th January. *Peas*—Receipts 298 bushs., and 250 bushs., last week. The demand is slac and prices are steady. Stock in store, Feb. 1 24,138 bushs., and 39,166 bushs. on the 30th Ja nary. *Oats*—Receipts by cars 1,200 bushs., and 5,0 bushs. last week. Stocks have increased from 11 400 bushs. on the 30th ult., to 34,606 bushs. on t 15th inst.; this has weakened the market. *Rye*— Not much offering; it is worth about 70c. *Seeds*— There is a better demand for clover; there a buyers of lots at $6.50 to $6.75, and sellers $6.75 to $7; timothy, $2 to $2.50 is offered while holders ask $2.50 to $2.75. *Flax*—$1. to $2.

FLOUR.—Receipts 2,248 bbls., and 3,575 bbl last week. There are orders in the market f No. 1 superfine at $4.25, and some business h been done up the line of the Grank Trunk (fro whence freight to points eastward is the same from Toronto), at $4.20; holders ask $4.30. Oth grades nominal as quoted; 100 bbls. fancy sold $4.50 on cars.

PROVISIONS.—*Dressed Hogs*—The market is d and a decline of $1 to $1.12½ on the quotatio of last week has occurred. *Pork*—Mess is he at $26½ to $27, and is nominal. *Hams*—A l of 500 in salt sold at 12c.; smoked sell at 14c. 14½c. in wholesale lots. *Shoulders*—Held at 10 to 10½c. *Cheese*—Is firm and is worth 13½c. 14c. in lots. *Lard*—Held firmly at 17c.; sto light and in few hands. *Butter*—Really choi dairy would bring 25c. to 26c. and is scarce; ord nary neglected, and in heavy stock. *Eggs*— good many packed are offering at 15c. to 17 market very dull. *Tallow*—Selling at quotation

PETROLEUM.—Trade is quiet, and prices of r fined are very steady at our quotations; the demar is limited to requirements for immediate co sumption.

Galway Mining Company.

NOTICE is hereby given that a Dividend at the Rate Thirty per cent. per annum, for the half year endi 18th January, 1869, has been declared on the Capital pe in at that date and that the same is payable at the office the Company at Peterborough, on and after MONDA the FIFTEENTH of FEBRUARY, 1869.

By order of the Directors,
JOHN BURNHAM,
Sec. & Treas

Peterborough, Feb. 11, 1869. 6t.-F.

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY,
EDWIN W. BRYANT, ACTUARY,
GUY. R. PHELPS, PRESIDENT,
ZEPHANIAH PRESTON, VICE PRESIDENT.
LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBE

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There no stockholders.

ITS DIVIDENDS Have averaged over 50 per cent. annually. Total amount of dividends paid the members since organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annualinte alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 1

During its last fiscal year this Company paid to its living members, and to the families of deceased membe nearly $2,600,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among older and leading Life Insurance Companies its average ratio of expenses to income has, throughits entire history, b the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to m all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

THE

EUROPEAN MAIL

FOR

NORTH AMERICA.

WITH WHICH IS INCORPORATED

"WILMER & SMITH'S EUROPEAN TIMES."

(Established in 1843.)

A FULL AND COMPLETE SUMMARY OF

HOME & FOREIGN NEWS

PUBLISHED WEEKLY

FOR DESPATCH BY THE MAIL STEAMER.

THE EUROPEAN MIAL

For North America, with which is incorporated 'Wilmer & Smith's European Times,' is published in the interest of the mercantile and general community.

In each issue is to be found all the reliable information, commercial and general, that can in any way prove of value to our subscribers. The greatest possible care has been, and will continue to be, taken by the Proprietors to obtain, regardless of expense, a faithful record of all market transactions in which our friends are more particularly concerned, up to within three hours of the closing of the Mail.

We furnish our readers with quotations of articles staple not generally noted in ordinary lists, of which the following is an example:—

Articles.	Prices per ton.	Cash discount.
CANADA PLATES		
Staffordshire (in L'pool) f.o.b.	£18 17 6	2½ %
Glamorgau " "	19 15 0	"
GALVANIZED IRON—		
Corrugated Shts., 20 guage fob.	17 0 0	"

The latest shipping intelligence, comprising arrivals, departures, sailings, and loadings, alphabetically arranged, is laid beforo our subscribers; and the tabular form adopted in the current number will be adhered to throughout—every casualty being regularly noted, and the state of the freight market duly advised.

Agricultural, Legal, and Medical news, of interest is given in detail.

We publish a list of Military and Naval Stations and all changes are promptly noted.

The Proprietors of the EUROPEAN MAIL urge the great advantages of this Journal, and trust for the friendly co-operation of all who think it of importance that the Old and New World should be more closely associated by those reciprocal ties resulting from a mutual furtherance of their material interests.

The subscription is 52s. or $13 (gold) per annum, payable in advance.

with which is united the

BRITANNIA LIFE ASSURANCE COMPANY.

Capital and Invested Funds.....£750,000 *Sterling.*

ANNUAL INCOME, £220,000 STG. :
Yearly increasing at the rate of £25,000 Sterling.

THE important and peculiar feature originally introduced by this Company, in applying the periodical Bonuses, so as to make Policies payable during life, without a higher rate of premiums being charged, has caused the success of the BRITON MEDICAL AND GENERAL to be almost unparalleled in the history of Life Assurance. *Life Policies on the Profit Scale become payable during the lifetime of the Assured, thus rendering a Policy of Assurance a means of subsistence in old age, as well as a protection for a family*, and a more valuable security to creditors in the event of early death; and effectually meeting the often urged objection, that persons do not themselves reap the benefit of their own prudence and forethought.

No extra charge made to members of Volunteer Corps for services within the British Provinces.

For TORONTO AGENCY, 5 KING ST. WEST.

1117—9-1yr JAMES FRASER, *Agent.*

PUBLISHED AT THE OFFICE OF THE MONERARY TIMES, No. 60 CHURCH STREET.
PRINTED AT THE DAILY TELEGRAPH PRINTING HOUSE, BAY STREET, CORNER OF KING.

THE CANADIAN

MONETARY TIMES AND INSURANCE CHRONICLE

THE Publishers have pleasure in announcing that the success of this JOURNAL has been such as to stimulate their efforts to rend it still more valuable to the classes directly and indirectly interested in the subjects with which it deals. As the only Journal in t Dominion which gives particular attention to INSURANCE, it has enlisted the hearty support of Insurance Companies; and while, the one hand, it contends for the rights of such Companies, it equally recognizes the rights of the public.

The subject of BANKING has become of such importance, as well by reason of past legislation as by reason of anticipated changes the law respecting circulation, that it is the duty and interest of our business men to make themselves acquainted with the princip on which sound Banking rests, and to prevent any action on the part of the Legislature likely to injure the community by lessen the usefulness of our banks. The discussion of this subject in the columns of this JOURNAL has called forth expressions of satisfacti from our most astute financiers, and has done much to give us the position we now occupy in the estimation of the public.

As MINING is in its infancy in this country, a journal devoted solely to the subject could not hope to thrive; but by giving f information regarding Mining operations, and by the employment of reliable correspondents, we have done good service to an import interest, and secured recognition from a class which, otherwise, could not have been reached.

Our purely COMMERCIAL DEPARTMENT has not been neglected, and each week's summary, while concise and pithy, has answered t same ends as a more diffuse elaboration could do, and conveyed to country dealers a complete synopsis of the changes in the Toronto a Montreal Markets.

This combination of interests which the circumstances of the country render necessary, has been of the greatest advantage to ea interest by diffusing information among all classes; but, in order to do justice to all, we have been compelled to employ a large staff writers, and to expend a considerable amount in securing trustworthy correspondents.

While we are thankful to those who have encouraged us thus far, we are anxious to extend still further the usefulness of this Journ and we call on all who consider that the enterprise is worthy of support, to lend us their assistance in making the MONETARY TIMES national organ.

On our part we promise impartiality, efficiency, and the best efforts of the ablest writers that can be secured in the Dominion. O the part of our clients, we expect a cordial support and active exertion to widen our sphere of usefulness. In helping us, they he themselves.

Every Merchant, Banker, Capitalist, Insurance Agent, and Broker, can aid us, and we hope that we are not asking too much, soliciting their assistance.

We shall be happy to receive at any time articles on subjects within our jurisdiction, which, if used, will be liberally paid for.

Subscription Price.....$2 per Annum.

A reasonable discount will be made to Banks, Insurance Companies, &c., which subscribe for their Agencies.

SEND FOR A SPECIMEN COPY.

N. B.—Every subscriber to THE MONETARY TIMES will receive THE REAL ESTATE JOURNAL without further charge.

THE REAL ESTATE JOURNAL.

The objects of this Journal are as follows:—

(1.) To supply to those interested in real estate such information as is of special interest relating to sales or transfers of real p perty in the principal cities, and throughout Ontario, construction of public works, and building improvements of every kind, increase decrease of municipal expenditure, debt and taxation, and, in short, whatever tends to influence the real estate market.

(2.) Leading articles will be furnished by competent writers on questions relating to conveyancing, the rise and fall of property, la grants, emigration, and other subjects coming within the legitimate scope of the Journal.

(3.) Lists of lands and houses for sale in every city, town and village of the Province, will appear in its columns, givi ng buyers t best possible opportunities for selecting desirable properties of any class, and in any locality; and, at the same time, affording sellers reliable and certain medium for reaching intending purchasers.

(4.) By a circulation extending into every corner of Canada, the announcements of advertisers will be brought to the notice of immense constituency of readers. A special feature in this connection is, that the Journal will be placed and kept on fyle at all the pri cipal hotels, reading rooms, and other public places in Ontario, and in Montreal. By these means it is confidently believed that eve class in the community will be reached.

THE REAL ESTATE JOURNAL is printed fortnightly, on good white paper, in quarto form, and is equal in size and appearance to anythi of the kind published on this continent.

Advertising, per line of nonpareil, each insertion, 5 cents. A small discount will be allowed on yearly contracts, for large spaces.

Address, "THE REAL ESTATE JOURNAL," Toronto, Ontario. Cheques should be made payable to J. M. TROUT, who w also issue all receipts for money.

Meetings.

CANADA FARMERS' MUTUAL INSURANCE COMPANY.

At the annual meeting of the members of "The Canada Farmers' Insurance Company," holden Thursday, 4th February, 1869,

Thomas Stock, Esq., was called to the chair, and after setting forth the objects of the meeting, viz :—the reception of the report, and the election of two Directors to serve in the place of William Macklem and John Weir, Esqs., whose term of service had expired, but who were eligible for re-election,—he called upon the Secretary to read the

Seventeenth Annual Report,

The Directors, in presenting their Seventeenth Annual Report, have pleasure in being able to state that, notwithstanding the keen competition they now meet with from other companies of a similar nature, they still continue to hold their own ; the number of policies issued having slightly exceeded that of the previous year.

Amount of Business done.—The accounts were closed on the 31st December, 1868, up to which time 5,144 policies had been issued, covering $4,056,986.00. The total amount then at risk was $10,776,010, represented by 14,009 policies, averaging $769.22 to each policy.

Losses.—The number of claims notified during the year have been 74, involving the amount of $20,824.55 ; of these, 64, amounting to $19,638.05, have been paid : 4, amounting to $922, were refused ; while the remaining 6 ($264.50) were, at the close of the year, under investigation, 5 of which have have since been settled. Of these 74 claims, 31 were in sums not exceeding one hundred dollars each.

There has been no action instituted against the Company for the past two years. In connection with this subject, the directors point with justifiable pride to the fact that in the seventeen years of the Company's existence, during which time it has issued 44,946 policies, but 5 suits have been brought against the Company for the recovery of claims.

Auditors' Report.

To the President and Directors of the Canada Farmers' Mutual Insurance Company :—Gentlemen,—We, the undersigned Auditors, have the honor to report that we have carefully examined the books and accounts of your Secretary and Treasurer, for the year ending on the 31st December, 1868, and have much pleasure in certifying to their correctness.

We submit herewith the following statements prepared by your Secretary, viz :—Receipts and Disbursements, Assets and Liabilities, Details of Expenses, Agency Account and General Balances—all of which we have examined, and find that they agree with the books and vouchers. Respectfully submitted.

DAVID WRIGHT, J. J MASON, Auditors.

At the first session of the Dominion Parliament, the Directors obtained power to alter the name of the Company, abbreviating it to "The Canada Farmers' Mutual Insurance Company ;" also, power to enable the Board to increase the limit of a single risk from $2,000 to $4,000, and power to re-insure with other companies. The Directors have taken advantage of the privilege

conferred on them by the amendment to their Act of Incorporation to very materially increase the amount of insurance on first-class risks, the result of which has been to raise the average risk on each policy, which stood last year at $685.00, to $769.22.

Rates.—The rates on first and second class brick dwelling houses were reduced early last year to 50 cts. and 70 cts. respectively per $100. The rate on isolated wooden buildings and contents was reduced to one per cent for a three year's risk, no premium note being required, so that a member knows exactly what he has to pay, and incurs no further liability. The premium note being abolished, and there being consequently no further security to members than that afforded by the rates imposed, prudence requires that those rates should be maintained sufficiently high not only to provide for the ordinary annual average loss, but likewise for the contingency of increased losses in casual years, a contingency which past experience—particularly that of the unusually heavy losses sustained by more than one company in the years 1864 and 1865, reaching in the case of this Company in the year 1865 to nearly double the ordinary average—has shown will most certainly arise. The Directors are satisfied that the rates now imposed will, with prudent management and a careful selection of risks on the part of their Agents, be sufficient to accomplish both these ends.

Much pressure has been brought to bear on the Directors to induce them to make a still further reduction in the rates, the argument being that other companies did so, and have so far succeeded in meeting their losses. This may be true, but it must be borne in mind that, while a company is doing a large business at the low rate of 75 cents on the $100, the cash accumulating from the premiums being paid in advance, in anticipation of losses that will occur only in the future, will enable it to pay all present claims with ease, it by no means follows, should the business of such a company fall off, that it would be sufficient ultimately to pay all the losses in full. In view of these facts, your Directors are not prepared at present to advise a further reduction, deeming it better, for the interests of the members, as well as for their own credit, to maintain such rates as will provide undoubted protection to the insured, feeling convinced that such a course will tend to still further secure that confidence in the stability of the Company which the public have ever entertained, and which it is the earnest desire of the Directors to perpetuate.

THOS. STOCK, Chairman.
RICHARD P. STREET, Sec. & Treas.

The report, after some conversation, was, on motion of Thos. Bain, Esq., seconded by Archd. Stewart, Esq., adopted.

Messrs. John Weir and William Macklem were re-appointed as Directors, and Messrs. S. S. Peck, Warden of the County of Peterboro,', and William Sexton, M.P.P. for South Wentworth, and Barth. Bull, Reeve of York, were nominated as Honorary Directors.

Several of the agents suggested that, from the very high reputation of the Company, if the Directors could see their way to making a further reduction of the rates, the business would be very largely increased.

The President, as well as R. Christie, M.P.P., who is a member of the Board, and the Secretary, all stated that the matter had, during the past year, as stated in the report, occupied their attention, but feeling the responsibility to preserve undoubted safety under the most exceptional circumstances as the first object in view, they felt it would not be wise to try experiments which their past experience showed at least to be open to question.

Votes of thanks were passed to the Directors, Secretary, Inspector, and Agents, after which the meeting adjourned.

At a meeting of the Directors, held immediately after the annual meeting, Thos. Stock, Esq., was re-elected President, and William Macklem, Esq., Vice-President.

ONTARIO MUTUAL INSURANCE CO.

The first annual meeting of the policy holders in the Ontario Mutual Fire Insurance Company was held in the company's rooms, Richmond Street, London. Ald. S. McBride, President, occupied the chair. The Secretary, James Johnston, Esq., read the annual report and submitted the financial statement as follows:

Annual Report.

Your Directors, in presenting their first report, beg to congratulate the membership at large upon the great and flattering success which has attended the organization of the company. Its promotion was instigated by a local necessity, and time has shown that the founders were correct in their supposition that this necessity was generally extended. The fact that the special class of risks which are patronized by us having mostly provided the dividends which accrue to insurance companies who accept mixed risks, has made our efforts to reduce their cost appreciated. Your Directors, in striking the tariff of rates, deemed it advisable that it should be based upon an average of the rates of respectable and paying companies. And while a premium note is taken for the full amount, it in no wise follows that the whole will be collected. All that is required is a sufficiency for working expenses and losses; the the unpaid balance, if any, is pocketed by the member, inasmuch as he does not pay it. Insurance being effected for a period of three years, the expenses in annually issuing policies are reduced at least one half. Steps, under the General Insurance Act, were taken in March, 1867, for organization, and in September following the first batch of policies were issued. In this, as well as in any new undertaking, there have been prejudices to overcome and difficulties to surmount, yet still those assist in the end to make the success greater. Zeal, in an honest purpose, is only made the more determined by opposition. Your Board now feel that the path for their successors is favorably opened.

During the time the company has been in existence, there have been received 1,059 applications for insurance, 33 of which were rejected; 17 have been cancelled, mostly on account of alienation of property, leaving the number in force 1,009, with an average risk of $514.

The expenses for the first year, compared with the business done, may appear large. They are, however, inseparable from a commencement in business, and should rather be spread over two years—as, for instance, in the case of furniture, books, &c., necessary for starting, which will probably serve for the next year. Even in this we compare favorably with other companies.

Your Directors have unanimously declined receiving any pay for their past services.

Your Directors regret that several letters and policies have miscarried. Every care is taken by the office in posting, yet they go astray. Several duplicate, as well as triplicate policies have been mailed.

Your Directors hoped that they would pass the first year without levying an assessment, but, unfortunately, a large loss occurred which could not be met in any other way. This call made it rather severe on the older members of the company; but still a further hope is expressed, based on months of exemption from losses, that no further assessment will be made on the same notes.

The losses have been six in number, and to the extent of $2030 50; of these four have been paid, and appear in the account, amounting to $2020 50; the remainder are only awaiting the vouchers to be settled.

The cash statement and capital account are annexed, which have been duly audited.

Under the general act your directors retire, but are eligible for re-election. Several Comp[illegible] have applied to and received from the Legisl[illegible] a special Act, amending this clause, as we[illegible] others, so that two or three Directors only [illegible] annually, leaving (should they not be re-ele[illegible] a sufficiency to induct the incomers into [illegible] duties and responsibilities. We have deferred [illegible] action in the matter this year, preferrin[illegible] to agitate the question in proper quarters for its [illegible] bodiment in the general Act. All of wh[illegible] respectfully submitted.

(Signed) SAMUEL MCBRIDE, Presi[illegible]
JAS. JOHNSON, Secretary.

WM. MCBRIDE, T. R. WESTCOTT, } Audi[illegible]

30th Jan. 1869.

Mr. James Reid moved a resolution, seconded Mr. Wm. Pope, that the report of the Directors, read, be received and adopted. The resolution s carried unanimously.

The members then proceeded to elect a new ard of Directors, Messrs. A. S. Emery and John edonald acting as scrutineers.

The vote being taken, the retiring Board Messrs. McBride, T. Wilson, S. Peters, John Macbeth, Brown, Edward Harris, Chas. F. Goodhue, lliam Starr, R. S. Murray, were declared re-ted unanimously.

). C. Macdonald, Esq., addressed the meeting a short time, making a few suggestions for the sistance of the Board in their future operations, l moved that a vote of thanks be tendered to Board for their services during the past year. e motion was seconded by Mr. Williams, and nimously carried.

The chairman, on behalf of himself and his workers responded appropriately and briefly, hly commending the invaluable services of James Johnston, their energetic secretary.

The thanks of the meeting, on motion of Mr. e, seconded by Mr. Emery, were unanimously dered to Mr. Johnston. That gentleman re-d in a very neat acknowledgment.

The Board re-elected Alderman Samuel McBride, sident, and Capt. Thompson Wilson, Vice sident for the ensuing year. The meeting then burned.

ST. JOHN BUILDING SOCIETY.

n adjourned meeting of this Building Society held Feb. 9th. A balance sheet of liabili-and assets of the Society in a condensed form, a summary of the transactions during the year, was read by the Secretary, in which he rasted the present position with that of 1st uary, 1868 :

DECEMBER 31, 1868.

he operations of the Society are based on 1, 3¾ shares, viz : 591 monthly investing shares, 16 paid up shares, and 547¼ advanced shares ; h whole representing a subscribed capital of $2,750.

he 547¼ advanced shares (to whom $200 on a share have been advanced) are debited with interest for a period of ten years (the time for h the loans are usually made), and are cover-d by mortgage security same as the amount ad-ed.

he monthly repayment from the 547¼ shares advanced, amount to $1,555.10.

he deposit branch of the Society's business s the increasing confidence which the public in the institution ; the amount now held on sit is $53,980.11, against $41,726.84 on 1st ary last year. Six per cent interest per an-is paid on the 1st January and 1st July in year. On the 1st January, 1868, the opera-of the Society were based on 1,111 shares, senting a subscribed capital of $220,200 ; the ase of subscribed capital is $40,550. The ase of advances during the year under review n $140,352.31 on 1st January, 1868, to $179,-3 on 1st January, 1869, or $38,734.72. This des principal and interest for the time for h the advances are made.

The members' monthly investments during the year, including borrowers' repayments, have averaged $2,049.98—being monthly increase of $394.45 over the previous year.

ANGLO-AMERICAN PEAT COMPANY.

The first annual general meeting of stockholders of the Company, was held at the Company's office, No. 388 St. Paul street, in Montreal, on the 16th January, 1869, pursuant to law, and convened by special notice, duly published, ten days previous to said meeting.

Mr. Barton being called upon to take the chair, and Mr. A. McK. Cochrane to act as Secretary.

The Chairman stated that the charter, incorporating the Company under the general Act of Limited Liability (Act 27-28 Victoria, cap. 23), had been issued, and that the preliminary steps had been duly complied with according to law. The charter was laid on the table for examination.

The Secretary submitted statements of what had been done thus far by the Provisional Board, financial statement, working account, and statement of expenditure on land, and permanent construction account.

Mr. Edgar proceeded to give some history of the undertaking ; he stated that some four years ago, he learned that there was valuable peat land near the Welland Canal, and after examining it, he, with some other parties, had purchased first one lot of a hundred acres, and then another lot, and so on as they could obtain it. Before purchasing largely, he had visited a number of peat beds in the United States, both East and West ; made himself acquainted with the quality of the material produced, and became satisfied that there was no finer article in existence than was found in the County of Welland ; nor could a peat bed be discovered in a more convenient location, being midway between the two great lakes, and close to the canal, it was easy to lay the peat down in the markets of all the cities and towns surrounding those lakes. It was also within half a mile of the Welland Railway, which connected with the Grand Trunk and Great Western Railroads. It was deemed advisable to secure the whole of the land, or nearly so, from which peat could be profitably taken, and this Company was therefore projected and the land purchased. The next thing to be done was to get a proper machine at work to test the estimate that had been made as to the cost of production. For this purpose he examined various machines in actual operation, but found only one that he considered suitable, namely, that used by Mr. Smith, of Troy, who had a large peat bog, something like that of Welland, and had spent large sums of money in testing various machines.

From all the machines, with some addition of his own invention, he had made a good machine, but had some further improvements to make, and between Mr. Smith and himself, a better machine had been constructed for the Anglo-American Peat Company, than had ever before been used.

Last summer, while the machine was being got ready, they had built a railway from the Welland Canal well into the property, a mile and a half in length ; then the works had to be put up, and the season was pretty well advanced before they were ready to begin manufacturing. It was found from experiments there, as well as in other peat beds, that while the weather was warm the peat could be nicely dried and ready for shipment in two weeks' time ; but in the fall a good article could not be produced, especially in frosty weather.—After getting to work, they found they could produce peat and deliver it on the banks of the canal for one dollar and forty-five cents a ton ; and they could sell it readily at $3 50 a ton ; though to make very large sales they might have to reduce their price to $3 a ton. The results of actual work thus far had been far in excess of what had been anticipated. They had been examining Mr. Hodges' machine, and were satisfied that, with some improvements which his (Mr. Edgar's) experience during the past season suggested, one or two of these machines would prove of great value. Mr. Walter Shanley had given it as his opinion that the company's peat bed was better suited for the Hodges' machine than any they had in Lower Canada, and that the material was better, being a pure moss peat.

Mr. Edgar said he thought they could make the ordinary peat for domestic purposes best with the kind of machine they already had ; but the Hodges' machine would make a better article for use of railways, steamboats, and engines. He was fully satisfied from the experience of the year that they would be able to manufacture peat much cheaper than they had originally estimated.

Value of machinery, buildings, &c.—permanent construction account.

Buildings—Engine House, Work Shops, Boarding House, Stables, &c	$4,500
Railway and Wharf, and Tramways	3,000
Machinery—2 Engines, and 2 Boilers, Dredge, Scow, 2 Peat Machines, Cars, Crates, &c	9,000
Horse and Carts, Tools, Trucks, Blacksmiths' Tools, &c	600
Materials on hand—Nails, Lumber, &c	1,400
Total	$18,500
Paid on account of Land	$117,000

Working Account.

Result of eight days work with one machine, "Smith's" Dry Fuel, 154 tons; cost of production $222.37,—equal to $1.44½ per ton.

Two machines, now complete and in working order, will make in season of 100 days, at same rate, 3,850 tons; cost at same rate, $5,559.25, which, if sold at $3 a ton, $11,550,—showing a profit of $5,990.75, with machinery we have now in operation.

One Hodges' machine to be put in by 1st of May next, will cost all complete, with permanent right to use it, about $10,000.

It will make 8,000 tons Dry Peat in the season, at a less cost than the other machines; but say at same rate, 8,000 tons will cost $11,551.74, which, if sold at $3 a ton, $24,000,—showing a profit of $12,448.26.

The foregoing estimates for the result of next season's work are low, as by late improvements the small machines now on hand can be made to work up to 25 tons or more in ten hours, instead of about 20 tons as in the calculations.

The peat is also calculated as if sold at three dollars a ton, which is fifty cents less than it will probably bring. The same material is now being sold in Montreal at $5 to $5.50 a ton, though delivered from boat last summer at $4 to $4.25.

On motion of Mr. Henry Starnes, seconded by Mr. Edwards, it was

Resolved,—That the transactions of the Provisional Directors are hereby confirmed and adopted, and all sums paid to them, or to the Provisional Treasurer, are hereby acknowledged as if paid after the incorporation and organization of the Company, and the thanks of the shareholders are tendered to the Provisional Directors for their services.

Moved by Mr. Barton, seconded by Mr. Major, that the present meeting sustain in all respects the by-laws, as set forth in the charter constituting the Company, and which are embodied in the book of records of the company. These are the ordinary regulations and by-laws prescribed by the law of limited liability.

On motion of Mr. Foster, seconded by Mr. Thomson, it was

Resolved,—That the election of Directors be now proceeded with by ballot according to law. Mr. Dillon and Mr. Egginton were appointed scrutineers.

The ballot having been taken up, the scruti-

neers retired, and in a short time returned with their Report, stating that Messrs. R. Reford, H. Starnes, A. M. Foster, J. E. Major, of Montreal; R. Milroy, Wm. Edgar, F. M. Wilson, of Hamilton, were duly elected Directors for the ensuing year.

On motion of Mr. Kent, seconded by Mr. Starnes, it was

Resolved,—The Directors are hereby authorized and empowered to accept and take from the proprietors of the land on which the works of the Company are carried on, being the lands now held in trust for this Company by Messrs. David Edgar and W. J. McAllister of Hamilton, (being 3,050 acres in the Townships of Wainfleet and Humberstone, in the County of Welland,) the said lands as they stood at the commencement of the Company's works, according to the prospectus issued. Carried unanimously.

Mr. William Edgar was elected President; Mr. Robert Reford, Vice-President; Mr. A. McK. Cochrane, Secretary Treasurer; and Messrs. John Dillon and J. C. Barton, Auditors.

After a vote of thanks to the Chairman and Secretary the meeting was closed.

ST. LAWRENCE TOW BOAT COMPANY.—At a general meeting of the shareholders of the St. Lawrence Tow Boat Company, held in Quebec, the following gentlemen were elected Directors for the ensuing year:—Hon. T. McGreevy, A. Joseph, Esq., S. J. Shaw, Esq., D. C. Thomson, Esq., L. Parent, Esq., John Roche, Esq., A. H. Murphy, Esq., H. J. Chaloner, Esq., and Julien Chabot, Esq. And at a subsequent meeting of the Directors, the Hon. T. McGreevy was re-elected President, and A. Joseph, Esq., was elected Vice-President.

Insurance.

FIRE RECORD.—Kingston, Feb. 17.—A fire broke out in the stables of Jno. Robb, carter, on the corner of George Street west, two cows were consumed in the stables. The fire extended to the dwelling house of Mr. Dodds, a workman in the foundry of the Canadian Engine and Machinery Company, which immediately adjoined the stable on George Street. His furniture was all rescued in advance of the flames, but the building fell an easy prey. Mr. Robb was insured for $200, and Mr. Dodds for $300, which will not cover the losses. The fire is believed to have been accidental.

Springfield, Kings County, N. B.—Two barns, with their contents, belonging to Allen Price, were destroyed by fire on the 8th. Loss $1,200 A large wooden house on the City Road, belonging to Mr. Lawler, also caught fire. The flames were extinguished without the assistance of the engines. As the house was unoccupied, it is supposed to have been set on fire.

Melrose, Feb. —.—The Congregational Church at this place was burned down. Loss $20,000; insured for $10,000.

Guelph, Feb. .—A serious explosion occurred in Clark's refinery, by which three men were injured. No damage to the building.

WINDING UP.—It will be remembered that the Hercules Insurance Company (life) recently took over the business of the International of London. Some circumstances attending the transfer gave dissatisfaction to the shareholders of the former company. One circumstance complained of was that somebody got £15,000 for promoting, or acceding to, the arrangement. In consequence of the feeling existing, some seven petitions were filed in Chancery, praying that the Hercules be wound up. A meeting of shareholders was called to consider what should be done. The proceedings lasted from two o'clock until nearly eight, and eventually, on the recommendation of the company's solicitor, Mr. Merriman, but contrary to the urgent advice of the manager, Mr. Shrubb, who stated that the company was perfectly solvent and had a profitable fire and life business, and contrary to the advice of other independent shareholders, who wished that a call should be at once made to pay the pressing liabilities of the company, it was eventually resolved that the company should be liquidated—Mr. Shrubb, however, to have the power of selling the fire and life business to other companies, subject to the approval of the liquidators.

—Notices are given in the *Gazette* that application will be made to the Dominion Parliament, next session, for a charter to establish the Imperial Bank of Canada; also for acts to incorporate the "Dominion Life Insurance and Guarantee Association," and the "Dominion Fire and Marine Insurance Company;" also for an Act to incorporate the Niagara and Erie Canal Company, with power to construct a ship-canal from the Niagara River at or near Fort George, to the Welland Canal, immediately above Lock No. 25, in or near the village of Thorold, and to extend the same to the upper Niagara, at or near Chippewa.

—The Quebec Marine Insurance Company have declared a dividend of 7 per cent., payable on the 22nd inst.

Railway News.

Corresponding week, 1887...	67,107 65
Increase.....	$6,222 55

—A meeting of the Montreal and Champlain Railway Company was adjourned to May 1st.

—It is stated that Mr. Brydges recently visited Lennoxville, Q., to arrange for the connection of the Massawippi Valley Railway with the Grand Trunk. A third rail is proposed from Lennoxville to Sherbrooke. The Concord Railroad Company have offered to transport the rails for the M. V. R. R. over their line free of charge. On the part of the Grand Trunk, Mr. Brydges offers to bring rails from Quebec at a nominal charge.

—The preliminary survey of the section of the proposed "Central Railway," between Ottawa and Vandreuil, on the Grand Trunk, is now on foot, but, so far, is merely undertaken with the object of securing a proximate estimate of the cost of the road.

—At the first meeting of the new Council for East Garafraxa, a petition was presented, asking a bonus of $20,000 to the Toronto, Grey and Bruce Railway. The Council "could not see" any return for the money, and accordingly they passed a resolution, stating that they considered it inexpedient to take any action in the matter.

—The Prince Edward Island papers are discussing the advantages of a railway from Charlottetown to Georgetown. It is held that as Georgetown harbour remains open to navigation a month longer than any other in the Island, the benefits derived from this railway connection would more than compensate for the cost. Produce that is now held during the winter and very often deteriorates in value before spring, could by this means be run by rail to Georgetown, and shipped from that place after Charlottetown and Summerside have been closed by ice. The cost of the road is, however, a serious consideration.

A BAD PROSPECT FOR MONTREAL.—The efforts now being made by Portland to secure more direct railway communication with the Western States by aiding a projected railway to Rutland thence to connect with the New York Central and another to Swanton, Vt., there to connect the Vermont and Canada and the Ogdens railway, trouble Montrealers. When these r are built, the Atlantic and St. Lawrence have formidable competitors for the trade w now uses the Grand Trunk. They see that duce from the West coming through Mon must travel a few more miles than via Ogdens and Swanton or Buffalo and Rutland. *Gazette* says that one of three things must be by the Montreal interests:

1. To compete with water-borne traffi Caughnawaga against Ogdensburg. Will Grand Trunk Railway Company and new company agree in this? Will the fo consent so to manage the road from Caughna as to favor this traffic, at the expense, perha the through traffic over its main line? Wil Lamoille Valley people, now in strict league the Ogdensburg Company, become parties to an arrangement? 2. The people of Mo may join the Grand Trunk Railway in putt third track on the road to St. Johns, and bui an air line thence to Island Pond via Newpo making the distances pretty even and the ch of successful competition much greater. O If the Grand Trunk Railway is indisposed o able to do anything, Montrealers may hel Foster to push on the line via Chambly and ham, and thence to tap the new line by an en independent route, either directly at She or through the Passumsic via Newport an Johnsbury. To us it seems that the tim sitting still is past. If the capitalists of Mo had built the Portland line over the best this danger would not now have arisen. instead of putting money into wharves at Mo Island and a Rouse's point extension, they run out one branch from St. Johns to Swa over the route now occupied by the Vermont tral, and another to Newport, to connect wi Passumpsic, the remedy would have been much easier to-day. But we have steadily persistently scorned to take the direct route place. We go to Three Rivers, Quebec and land via Richmond; we go to Ottawa via cott, we go to Waterloo via Granby; w soon to go to Newport via Lennoxville!

MUSKOKA RAILWAY.—At Orillia, a few ago,, the following were elected officers Simcoe and Muskoka Railway:—Isaac May, ident; A. P. Cockburn, M.P.P., Vice Pres Arthur Robinson, C. E., Chief Engineer; R. Grant, Secretary and Treasurer; S. Rob Solicitor. The stock books were opened and siderable amount subscribed. The matter terminus at the south end is left an open qu

INTERESTING STATISTICS OF AMERI RAILROAD IRON.

seems to be the impression, particularly ng those whose observations do not extend nd our great trunk lines, that the per centage ils worn out each year is much greater than given above; but this cannot be the case nu- ll the estimates that have been made of the ber of miles of railroad in the country have greatly exaggerated. It must be remember- hat, whilst many of the rails on main lines our great railroad centres are worn out in a e year, there are thousands of miles of track e Southern States and in the thinly settled ons of other sections that last over twenty rs.

England the actual waste of iron rails by ling, oxidation, and loss is said to amount to 0 tons a year, whilst about 250,000 tons re- to be taken up and re-rolled. As the num- f miles of road there, including a second tra and sidings, may be safely put down at 22,0, it follows that the average wear and tear f ack amounts to 10.36 per cent per annum. in that country, where the destruction of is so much greater than here, we are told n some lines of light traffic, rails frequently 0 years, while on lines near London, which nder constant and heavy work, many miles ack require relaying in less than twelve hs.—*U. S. Railway Journal.*

* In all cases tons of 2,000 pounds.

The creditors of the Peterboro Petroleum Co. re requested to send in their claims before ch 1st.

The Canadian Navigation Company have de- l a dividend of 7 per cent, and re-elected directors.

The Canadian Monetary Times.

THURSDAY, FEBRUARY 25, 1869.

ANGLO-AMERICAN PEAT COMPANY.

The proceedings at the annual meeting o this Company will, we doubt not, be read with interest, for we are all anxious to learn what are the prospects of being able to obtain cheap fuel. The Company seem to have gone to work in earnest. A railway a mile and a half long has been built by them from the Welland Canal to their property, and a peat machine of improved character was constructed specially for their operations. Their experience thus far is that they can produce peat and deliver it on the banks of the Canal for $1.45 a ton which can be sold at $3.50 a ton, the same material being sold in Montreal at $5 to $5.50. We need scarcely say that we wish these peat producers every success, and we doubt not, through the zeal and energy of the Secretary, Mr. A. Mc. K. Cochrane, that the stockholders will find their profits handsome.

CANADA FARMERS' MUTUAL.

The amount of business done by this Company in 1867 exceeded that of any previous year, and the report for 1868 shows that the Company has held its ground notwithstanding the increased competition with which it has to contend. The following exhibits at a glance the substance of the business for the year just closed:

Premium earnings		$37,828 56
Less agents' fees		3,846 25
		$33,982 31
Losses paid	$19,902 55	
Expense of investigation	743 20	
	$20,645 75	
Current expenses	5,573 78	26,219 53
Balance		7,762 78

The premium note system was done away with last year and rates were reduced. The Directors very properly decline to advise a further reduction until a reserve is accumulated. The special privileges allowed to this Company under their amended charter give them a great advantage, which the judicious management of Mr. Street will not fail to improve fully.

ONTARIO MUTUAL.

We give elsewhere the first annual report of the Ontario Mutual Fire Insurance Company, the head office of which is at London, Ontario. The members of this infant association are to be congratulated on the success which has attended the efforts of those on whom its management devolves. In little more than a year the Company has issued 1,026 policies, all on non-hazardous risks, and generally spread over the country. The average risk is small, only $514, a good feature in a Mutual Company. The expenses of management are light, while the assets apparently available shew ample security to the insured for payment of losses.

NORTHERN RAILWAY.

The traffic receipts of this railway indicate in their rise or fall, the increase or diminution of certain branches of Toronto trade. The gross traffic receipts for the year 1868, $550,070, were less by $11,300 than those of the year previous, the falling off being accounted for by the decline in the supply of square timber. On the other hand, the passenger traffic and the article of sawed lumber have been the sources of increased receipts. The working expenses give a rate of 61.06 per cent. for 1868, about 1.77 per cent. higher than in 1867. This increase is attributable to the high price of fuel wood, and two disasters which involved injury to the permanent way, as well as the destruction of a considerable amount of property. Great credit is due to Mr. Cumberland for his admirable management of this line of railway and his unceasing efforts to extend its usefulness and increase its efficiency. It is contemplated to construct a new elevator and wharf at Toronto, at a cost of $140,000, and one of large capacity at Collingwood. With the Rama and Muskoka Canals constructed, the lumbering interest of the north shore of the Georgian Bay developed and the free grant region settled and cultivated, the Northern Railway traffic will undoubtedly be largely increased, so that the prospects may be regarded as the best. These matters are known to and appreciated by the Directors of the Company, and their efforts seem turned to a prudent preparation for the the good time coming and the hastening of its approach, by contributing influence and assistance to such enterprises as are likely to secure it.

EXTRACT OF HEMLOCK BARK.

Heretofore we have set forth in these columns the advantages likely to accrue to Canada from an energetic development of her material products, dwelling with particular emphasis on the production of peat and the manufacture of sugar from beet root and describing succintly the various processes of manufacture. We propose, now, to consider another branch of industry which might be pursued with benefit to the country. The hemlock is a native of Canada and if a cheap

mode of extracting from its bark a tannic acid superior to the agencies now used in tanning is available, we may naturally urge its utilization.

Tanners employ different ingredients, all more or less efficacious, in converting the raw hide into leather. We will enumerate the leading ones, viz. — the bark of the larch, oak, cork-tree, birch, willow, mimosa, valonia, myrabolanis, and divi-divi. The question now arises, can the extract of hemlock bark be made so cheap as to come into competition with the above enumerated articles, nearly all of which have to be imported at considerable cost. We will try to solve the question. We quote from Powell & Sing's Liverpool Circular the prices, and also the amount of tannic acid contained in the different articles used by tanners :

	Per cent of Tannic.	Price per Ton.
English Oak	10 to 20	£ 7
Valonia	30 to 35	18
Divi-divi	28 to 29	13
Myrabolanis	18 to 20	17
Mimosa	15	11
Cork-tree	8 to 10	9
Sumrack (Sicily)	12 to 20	21
Cutch (Bombay)	40 to 45	24

We can place on the European market 400 pounds of extract of hemlock bark of the first quality, which will contain about 360 per cent of tannic acid, for £4 sterling. One ton prepared oak bark, at 10 per cent, yields only 224 of tannic acid, and at 20 per cent, 448 of tannic extract. The mean of this will be 360, or 24 degrees less than is contained n 400 pounds hemlock acid. For oak bark, he price is £7 to £8 10, unground and unleached. These figures apparently show that it only requires enterprise, capital and ability to secure for the sale of the hemlock extract a market superior to any attainable for most other products used in tanning.

The method at present generally used for extracting the tannic acid from hemlock is as follows: The bark is ground when dry, and by the necessary friction it becomes so heated as to give out a large amount of hydrogen, thus rendering it less soluble, and consequently requiring a great amount of heat to eliminate the tannic from the pulverized mass. This is done by submitting it to heated baths or leaches, and afterwards inspissated or vacuum pans, which to a greater or lesser extent decomposes the tannic acid, but heightens the color of the extract, a property very objectionable to the tanner. The amount of heat thus produced also causes the resin and other residuum to become so incorporated with the extract as to produce fermentation, which seriously damages its quality for both tanner and dyer.

Various methods have been patented, each of them having for its object the elimination and the condensing of the extract in the cheapest and best manner. Among the many, we notice a process patented by Mr. Wm. Maynard, of Montreal, in which the patentee sets forth or claims—1st. The absence of dry heat in disintegrating the fibre, since he crushes instead of grinding, as is done by other methods; this saves the extra expense of storing in order to dry the bark. 2nd. The fibre being so thoroughly pulverized, the extract is given out without the expense of leaching, being merely filtered from the organic and gummy matter or residuum. 3rd. Evaporation is produced by a method altogether novel, and doing away with explosive or boiling heat, and by means of mechanical appliances in conjunction with chemical action, all foreign particles tending to fermentation are thoroughly separated. Besides this being a cheaper method of obtaining the tannic, there is a great saving in manual labor, the process not requiring more than half the number of hands usually employed by other manufacturers.

Of the value of the different patents, tanners must judge for themselves; but the subject generally is one of considerable importance, and may open up a large new branch of local manufacture, if taken up with skill and energy.

The failure of Messrs. W. R. Brown, & Co., brokers, is attributable to heavy losses on gold speculations in New York. They have been holding a large quantity of gold since September, at heavy margins, in expectation of a rise. It is said that they had to sell $200,000 and realized a loss on the whole transaction of at least $50,000. Keeping up the margins was a heavy drain on themselves and their backers. Speculation in Erie Stocks finished them. Their largest creditor is the Royal Canadian Bank, but it is said that it holds sufficient securities to protect itself.—Deposits to the extent of six or seven thousand dollars are gone. It is not probable that anything will be realized by creditors not directly secured.

According to the Public Accounts of the Province of Quebec submitted to the Quebec Legislature, the total receipts for eighteen months ending 31st December were, $2,612,514 51, and the expenditure, $1,794,297 23, leaving a balance of $618,216 92.

BANKERS' MAGAZINE.

The February number contains articles on the National Currency—Paper Money and its Evils—Wells' Report on the Financial Policy of the Government—besides the usual quantity of interesting and useful information.

—The Quebec Gas Co. has declared a dividend of four per cent. for the half year. Transfer books will be closed until the 1st March.

Correspondence.

CANADA LANDED CREDIT COMPANY

Editor of the Canadian Monetary Times.

SIR,—I was very glad to find in the last num of your paper a full report of the proceeding the annual meeting of the Canada Landed Cr Company. The reports in the daily papers g me but a poor opinion of those present at meeting, but when I came to read your accoun what had occurred, I did my co-shareholders tice. But it seems to me that a fuller report t that presented by the Board of Directors to meeting should have been forthcoming. I searched through it in vain for an account of working expenses of the institution. Other panies and societies do not hesitate to give publicity to their affairs, and it is hard to see is to be gained by the exceptional position of Canada Landed Credit Company. I know to cost that such management does positive h for I am met with all sorts of questions wh try to sell my stock. I know further, that cellation and forfeiture of shares have been g on for some time past in a wholesale man For all that appears, the present dividend most of the past have been paid out of the of these forfeitures. I hope that the new Dire will see that a full investigation is had, and s that our stock will improve. Enclosed you find my card.

Yours, etc.,

ONE INTERESTE

Toronto, Feb. 22, 1869.

CLASSIFICATION OF VESSELS.

To the Editor of the Monetary Times.

Your correspondent who wrote respecting disposition and classification of vessels is s ingly of the opinion that one Inspector can a vessel. He is mistaken. In 1865, one do so; in 1866 it required two; but in 18 takes three. He considers that an indepe inspector should be employed, as inspector likely to be friendly to those builders who pa ize them. The thirty-five years experien Lloyd's and the thirteen at Buffalo proves th "independent inspector" is quite as friend builders who "appreciate his friendship," company inspector to the builders who "pa ize" him. He says the report of the indepe inspector should be revised by the associatio "association" means company inspectors the influence of the builders and owners will st felt; the independent inspector will simply assistant to the company inspectors. If "a ation" does not mean company inspectors they are not to revise the report then the opi in the various offices as to which vessel standard and which are not, will probab absurdly conflicting; and the number of (complained of by your correspondent) in the same vessels are classed differently i different offices will be greatly increased. fact must not be overlooked that there are vessels belonging to Ontario, that the Insp of Ontario Companies know or ought to them all, and no approach to unanimity e expected unless these inspectors are consul to their class. Would not the employmen surveyor (overlooked and paid fairly by o merchants and underwriters,) for classing n altering class of old vessels be fairer for all p

Another grievance complained of is, th owner of vessel property has suffered loss standard of his vessel having been lowered the sailing season. Such alterations w inevitable under any system. If sails blow or a vessel springs a-leak she loses class t sails are replaced or the vessel repaired. O pose it is not known that a vessel is we rotten till a storm demonstrates the fact

e season is half over. Is there any injustice classing her down? Would it not be grossly ijust to publish a vessel as fit to carry ain, when the grain would be destroyed if t on board? It is as much the business of owners know the state of their vessels as it is that of e underwriters, and, if a vessel has been classed o high, her owner has no cause of complaint nen she is put right.

When the underwriters think it advantageous go to the expense of an assistant inspector they ll, doubtless, employ one. It is probable that r every $5 they lose from errors in the register, ey lose $100 from overloading and carelessness masters.

The custom has been for the inspectors to travel nd in March, not so much for the purpose of eveying, as for seeing what repairs the vessels undergoing, and examining those as to whose ndition they are in doubt.

Yours, &c.

Toronto, Feb. 23, 1869.

MERCANTILE AGENCIES.

To the Editor of the Monetary Times.

SIR,—I have heard the question debated whether Mercantile Agencies are a benefit or otherwise to the trading community. Some affirm that they make the merchant rely less on his own judgment, that they help to expand credit, &c., but my own opinion is that the tendency is on the whole for evil. Still, I think, I see what is a glaring injustice in their management. Most of your readers are aware of the method used in procuring the "ratings." The objection I see is that the merchant rated has no opportunity of judging of the correctness of his character and means as set forth in their books, unless he is a member of the institution and even then it is questionable if he could, with a good grace, get the *minutiæ* on which they base their judgment. The plan, I think, that should be adopted is this: Let the Agencies mail every merchant and tradesman a statement of his character, &c., as entered by them. If it is incorrect, the injured party can then claim the right to show wherein it is wrong. Should it be urged that the Agencies by this course would leave themselves open to action for libel, let them be protected by legislative enactment. By the present system, many men are suffering unknown to themselves, through the accidental errors of the Mercantile reporters; and doubtless the insertion of malicious mis-statements is not unknown to the offices in Canada any more than in the United States. I could give instances, if required, of great injustice having been done, and need from my own mercantile experience. An improvement, such as I have above suggested would remove the strongest objections to these organizations. Commending the matter to the attention of yourself and of your readers.

I am, &c., D. T.

Financial.

MONTREAL MONEY MARKET.

(From Our Own Correspondent.)

Montreal, Feb. 23, 1869.

There is still plenty of money, and a difficulty in finding good and profitable investments, first class paper being readily taken up by the Banks at the minimum rate of discount, say 7 per cent. 2nd and 3rd class paper 8 to 9 per cent., but in this class the Banks are cautious in their discounts. Very little is offering on the street and only such as the Banks declined, the rates ranges from 12 to 16 according to the names. Money can be obtained on first-class documentary security at 6½ per cent. The stock and share market continues dull owing to holder being indifferent, and buyers being unwilling to pay the extreme rates; the supply of capital seeking investment is large, the high prices demanded being the chief obstruction to a large business being done. Bank of Montreal has sold from 139¼ to 139½. Holders now asking higher rates. City has rather receded and is worth 102¾ to 103—sellers now asking 104¼. Merchants' 108 to 108¼. Toronto 120 to 122½. Molsons' are in favor at 111 to 111¼—not much change in other Banks. In stocks, sales of telegraph 132½ to 133 with some enquiry. City Gas Co, asked for at 142—sellers demanded 145. Mining Consols have sold moderately at $3 12½. Not much doing in other shares.

TORONTO STOCK MARKET.

Business for the past week has been pretty active and prices in most cases well maintained. There have been large transactions in township Debentures at high rates and in Government Bonds at a slight decline on the last week's prices.

Bank Stock.—A few small sales of Montreal was made at 139¾. There are buyers of British at 104, but none in the market. Ontario declined in the beginning of the week to 99, but has since slightly revived there being buyers to-day at 99½ and no sellers under par. Small sales of Toronto occurred at 121, sellers generally asking 122 but buyers will not advance over 121. Royal Canadian has been dealt in during the week at 90, and 91, buyers now offer 90, sellers ask 90½ to 91. There were large sales of Commerce at 103, sellers now ask 103¼. Sales of Gore were made at 40, 40½ and 41, no buyers now over 40. Merchants declined during the week to 107, but closed stronger with no sellers under 108½. There are buyers of Quebec at 99, but no sellers. Molson's sold at 111¼ to 112, closing with no sellers under 112½. Buyers offer 103 for City, but sellers want 103½. There are buyers of National at 106½. Jacques Cartier could be placed at 108½, but sellers want 109. For Mechanics 95 would be paid, no sales. Buyers offer 103½ for Union, but sellers ask 104. Nothing doing in other banks.

Debentures.—Sterling Canada sixes have been largely dealt in at 103½, 103, and 102½; five per cents. offer at 94½. Dominion Stock has been sold at 105½. Toronto are much enquired for, but none offering. County would be readily taken at par.

Sundries.—Canada Permanent Building Society have been dealt in at 125, and for small lots 125½ has been paid; Western Canada sold at 119½ to 120; there are buyers at the latter rate but no sellers under 121; Freehold has advanced to 110, but there is very little offering. City Gas is scarce with numerous buyers. Several sales of British America Assurance occured at 55 to 55½, it is still procurable at the latter rate. Montreal Telegraph sold at 133½, there are now buyers but no sellers at that rate. Large sales of Canada Landed Credit were made at 75, but holders want higher rates. Some large mortgages are offering at 8 per cent. There is more demand for money.

ALTERED NOTES.—A one dollar note of the Royal Canadian Bank has been changed to a ten very cleverly. The altered bills are thus described:—The word *one*, wherever it occurs, is erased, and *ten* put in its place, both on the back and the face of the bill. There are two large figures *one* on the face of the bill in *green* color. But this green is the common green ink, not the patent color—and these figures have evidently been erased by means of acids, and the figures *ten* substituted, painted in green ink. Had the original figures been printed in the patent green, they could not have been erased. Another test by which the genuine *tens* of this bank may be known from altered *ones* is that the former have a vignette of the Queen on the left hand face of the bills.

GOLD CONTRACTS IN THE STATES.—The Supreme Court of the United States has decided that a contract stipulating payment in gold coin is valid in law and can be enforced. The case before the Court was one in which the contract had been made prior to the Legal-Tender Act, and the issue of greenbacks. The decision, however, is interpreted as in no way depending on the date of the contract, and it is inferred from the reasoning of the Judges that they would enforce contracts to pay gold goin, even if made since the Legal-Tender Act was passed.

INTEREST REMITTANCE.—The City Chamberlain yesterday remitted to the Bank of London, where payable, the interest on the city debt to the amount of £5,500 sterling. It would not be due until next April.—*Hamilton Times.*

—Another investment in Dominion stock, to the amount of $750,000, has been made by the Ontario Government. This, taken with the amount previously invested, gives us over one million and a half dollars so invested, and brings us 6 per cent, or about $90,000 in the shape of interest.

—By the failure of the Commercial Bank, the north shore of New Brunswick has been deprived of all banking accommodation. A large and influential meeting was held at Miramichi, and a deputation appointed to visit the Upper Provinces, and confer with the banks here as to the opening of branches.

Commercial.

Montreal Correspondence.

(From our own Correspondent).

Montreal, Feb. 23, 1869.

Since my last, we have had a succession of snow storms, and if before our country roads were pretty well blocked up, they are now almost impassable, so that all business communication with the country districts may be said to be for the time suspended. The amount of snow on the level ground in the country averages over six feet, and in town it is fully more than one foot deeper than has ever been known. Our streets are consequently in a wretched state, the centre of the street being in most instances four to six feet above the pavement. A large number of carters are employed in carting away the snow, thus adding to the confusion which prevails.

As regards business, I can only report it as perfectly stagnant; no transactions beyond mere retail, the general feeling is of a decidedly gloomy cast.

GROCERIES.—Stocks of the chief staples are light, and holders therefore are firm. *Teas* are quiet; small sales, chiefly of uncolored Japans at 46c. to 56c. *Sugars* and *Molasses* are very unsettled, owing to the disturbances in Cuba; the feeling is that prices must rise higher, especially as the insurgents seem to be fairly in the Cienfuegos district, the great sugar-growing part of the island. With an estimated short crop in Brazil, Mauritius and some of the West India Islands, in all probability a high range of prices will be maintained;

several hundred hhds. of raw have changed hands at 8¾c. to 9¾c., passing chiefly into the refiners' hands. Molasses have participated in the advance in sugars, and several hundred hhds. of different sorts have changed hands at high rates. *Fish* – A large business has been done in herrings at full rates, say $5.50 to $5.65 for No. 1 split. Not much doing in other sorts. *Petroleum* in good demand, 37½c. by the car load, stocks are light. Nothing to notice in other articles.

PRODUCE.—Buyers will not operate in flour at present rates, and holders are equally averse to submit to any decline; our stocks are large, some 14,000 brls. over last year, and no demand for shipment. The late decline has caused a suspension of all operations to arrive, and both buyers and sellers have abandoned the market. I give the latest quotations, but must state that they are nominal: Extra, $5.25 to $5.40; Fancy, $4.95 to $5; strong Supers, $4.70 to $4.75; Supers No. 2, $4.35; Fine, $4.10 to $4.15. Grain of all sorts at nominal prices. U. C. Spring wheat, $1.12 to $1.14; Peas, 90c. to 92c.; Oats dull and easier, 46c. to 47c. per car load; Barley, $1.20 to $1.25 for ordinary.

PROVISIONS.—Dressed hogs have declined, but what is the cause I cannot see, they range from $8.75 to $10.50 over the market; Butter remains firm but nominal, at 23c to 24c. for choice dairy. Nothing doing in other articles.

DRY GOODS.—The spring assortments are arriving, but I expect the imports will be light. Nothing will be done till the middle of next month. Prospects for the spring trade are not bad.

HARDWARE.—I have to report a very quiet market, few orders from the country coming in and the town trade is very quiet.

Toronto Market.

DRY GOODS.—Since the 1st of January the amount of business done has been below the anticipations entertained of it. Some houses report good sales of Cottons and Tweeds, these goods being somewhat low in stock with country merchants. Spring goods are now arriving, and will be opened out about the 1st of March, though it is not anticipated that the Spring trade will open for some weeks yet. Owing to the backward state of the winter trade, the spring business is expected to begin late, and to amount to a fair average. Importers are operating cautiously. They all depend largely on sorting up as the season progresses. This they are now able to do with great facility. The same competition between rival routes which gives us through rates of freight from Liverpool to Toronto as low as those to Montreal, gives us also an advantage in time; that is to say, goods are laid down in Toronto from Liverpool as quickly (and often quicker) as they are brought to Montreal, because the competition extends not merely to rates of freight, but embraces the element of time as well, which is often quite as important as low rates of freight.

The different Woollen factories in the country are running steadily, and are constantly making improvements in the quality and style of their goods. As bearing on this point, we find the following in a late number of *Morgan's Trade Journal*, in the annual report of the Huddersfield market: "Canadian buyers visiting this neighborhood have been very cautious in their purchases, and have not bought as many goods as usual. The low class of goods they have abandoned; they are making large quantities themselves. What they want from us is a better and firmer class."

BOOTS AND SHOES.—Orders are coming in pretty freely. Now that the sleighing has improved, it is expected that remittances from the the country will also increase.

GROCERIES.—Trade has been moderately active. —*Sugar*—The market continues firm, and prices are ¼c higher. The New York "Shipping List" of Feb. 20th has the following on the state of the market: "The continued alarming accounts from Cuba of the rapid progress of the revolution into the principal sugar-growing districts, if not now overspreading the whole island, more and more interrupting railroad and other communication with the interior, and of course preventing the due course of shipments *to*, and by consequence *from*, the ports of delivery, together with advices of rains and cholera the unsettled state of the slave population—continual skirmishes with the insurgents in every direction—the almost total suspension of trade, and all the waste and destruction to property incidental to internal strife – give promise of a much greater reduction of the crop than was estimated in the early part of the season, which, without these drawbacks, was 20 to 25 per cent below the crop of last year. These occurrences sufficiently account for the late excited state of the Sugar market, and the considerable advance in prices noticed by us, now going on for more than a month past, the worst point being about the 10th December. The excitement consequent upon this state of things has continued unabated since our last, the most serious advices having come to hand since Tuesday. Refiners, having a larger margin for their products than for a long time past, buy freely even at the constantly advancing prices demanded from day to day—we might say from hour to hour. Speculation is also busy to secure probable profits, and the Trade, so far as the small stock suitable for their use will allow, are also ready purchasers. Holders continue to offer their rapidly diminishing stocks very sparingly, or refuse to name prices at all. A large portion of the stock here is new crop, mostly offered on arrival; that of old is small and rapidly diminishing. The stocks in New York at the dates mentioned were:

		Sugar.			Melado.
		Hhds.	Brls.	Bags.	Hhds.
Stock, Feb.	19, 1869.....	9,700	4,000	1,967	590
"	" 18, 1868.....	3,034	3,826	560	100
"	" 19, 1867.....	20,889	35,278	117,731	160
"	" 20, 1866.....	19,573	36,311	96,691	33
"	" 18, 1865.....	10,200	12,800	89,373	36

Molasses—The market is again firmer; in New York, prices are 2c to 5c higher, owing to the Cuban advices above noted. *Fruit*—Upwards of 25,000 boxes raisins changed hands in New York, the market closing firm at $3.20 for Layers in trade lots.

GRAIN.—*Wheat.*—Receipts 26,000 bush., and 36,492 bush. last week. Spring is dull and nominal; there is a good deal offering and not much demand. Good samples of Fall are scarce, and in demand at about $1, one or two cars sold at that price; a choice lot is held out of market at a higher figure; smutty samples are plenty, but can't be sold. *Barley.*—Receipts 2,000 bush., and 450 bush. last week; the market is quiet and steady at quotations. *Oats.*—Receipts 600 bushs. and 1,200 bush. last week; car loads are worth 51 to 52c. on the track. *Peas.*—Receipts 350 bush. and 290 bush. last week; offering at 80 to 85c. with buyers at 75c. *Rye*—Nominal, at 70c. *Corn.*—Market glutted; lots are offering with a limited demand at 60 to 63c. retail lots, 65c. *Seeds*—Are quiet; Timothy is offering freely in car loads; lots are worth about $2 to $2.50; holders ask $2.75 for small parcels of No. 1. Clover is quiet and unchanged, at $6.50 to $6.75, which are the prices paid by dealers. *Flax*—is higher, at $2 to $2.50.

FLOUR.—Receipts 2,389 brls., and 2,248 brls. last week. No. 1 Superfine is held at $4.15 to $4.20, with buyers at $4; 100 brls. sold at $4.20. Fancy nominal, at $4.25. For a lot of extra $4.60 was bid; no sales. *Bag Flour* held at $3.90, with buyers at $3.80.

PROVISION.—*Dressed Hogs*—The season is pretty well over, and there is very little doing. *Pork*—Mess is held at $26.50 to $27.50, no sales reported; Extra Prime is worth $20 to $21. *Butter*—Really choice continues to be inquired for, f local use, at 25c to 26c, but it is scarce; ordina lots are worth about 19c to 21c, with not muc doing. *Oatmeals*—Are steady and nominal quotations. *Cheese*—There is a good local demar at quotations. *Lard*—Quiet and firm at 16 to 17c.

HIDES.—Prices are steady, and the supply equal to the demand. Our quotations are t buying rates in this market.

FREIGHTS.—Rates by Grand Trunk Railway: Flour to all stations from Belleville to Lynn, i clusive, 35c., grain per 100 lbs. 18c.; flour Brockville and Cornwall, inclusive, 43c. grain 22 flour to Montreal 50c. grain 25c.; flour to stations between Island Pond and Portland, i clusive, 85c. grain 43c.; flour to Boston 90 gold, grain 45c.; flour to Halifax $1.10, grain 55 flour to St. John $1 02. Boxed Meats to Liverpo per gross ton 80s.; lard or butter in tinn 85s.; Pork 11s. per tierce; flour 5s. 6d. barrel; grain 12s. per 480 pounds. Rates Great Western Railway—Flour, Toronto to Su pension Bridge 25c. gold; thence to New Yor 92c. U. S. currency per bbl.; to Boston $1.0 Grain to Bridge 13c., gold; thence to New Yo 47c, U. S. currency; to Boston 51c. Grain, T ronto to Detroit, 18c. ber 100 lbs; flour 3 per bbl.

English Tea Trade in 1868.

The tea market during the last year has be subject to severe fluctuations. It opened und the influence of extended deliveries and of decre ing stocks, so much so that, viewing the statist of the previous four years, it appeared that co sumption had for the time outstripped productio This led to active speculation, raising the price common classes fully 4d. per lb. from the low point. The large advance, however, checked t clearances, and although the old stock was reduc to sixty-four millions, still, as the reduction w not so great as expected by some, a retrogra movement set in, resulting in a fall as sudden a almost as extended as the previous advance h been, stimulated also by the news of the enorm and hurried shipments of the season 1868-9, a eventuating in losses on the bulk of the import large or larger than ever experienced.

But worse even than the market being flood by arrivals has been the results of inferior qual to which we have often before had cause to adve Of the Foo-chow teas, what with the mixture old leaf and the amount of dust, it may be fai said that there are scarcely any really fine parc though chop after chop has been bought as su and this remark applies to fancy teas as well as Congou. Of the teas from the north, we speak more favorably; the Oonfaas have been markably fine, the Ningchows good; but ev here the Monings and Oopacks, though fine make, have been mixed with inferior leaf, so a increase the quantity, and are altogether defici in richness and flavour.

If it is to be admitted that the altered relati of trade in China will in future necessitate overwhelming supply during the early mont the position at home must also be realized—th with the increasing rapidity of communicat and freeness of transit, the necessity of any a moderate stock is a thing of the past—that la exports from China will inevitably depress pri at home for a time at least, and that, theref if the trade hereafter is to be a remunerative o there must be a radical change in the mode of b ing, in the rates paid, and the quality purch The present system holds out a premium to Chinese to make bad tea, and has been the fer source of ruinous loss.

Indian teas continue to show great improvem in manufacture, and we have reason to hope t before long the bulk of the import will be te really high class character. They have fluctua with China teas, and at one time prices had rece considerably even for Pekoes; but the better gra have since recovered, and all high conditio

nalities of the new crop have met a ready sale at ll prices.

The imports of tea into the United Kingdom ave been 153,000,000 lbs, against 124,750,000 s in 1867; the deliveries for home consumption, 6,250,000 lbs, against 111,000,000 in 1867; tto, for exportation, 35,500,000 lbs, against 32,-0,000 lbs in 1867; the stock remaining on the st of December was 88,500,000 lbs, against 77,-50,000 lbs in 1867.

Stocks of Petroleum.

The following is the stock of Petroleum the United States: On January 1st, 1869, there re 780,000 barrels of crude or its equivalent, ainst 1,000,000 barrels at the same time in 68, showing a reduction during the year of a tle over 200,000 barrels. The foregoing applies oil produced in Pennsylvania, and does not clude a stock of about 50,000 on hand in West rginia and Ohio on January 1, 1868, and one of out 10,000 or 15,000 barrels in the same States the 1st inst. The annexed table shows the ck on hand on the 1st days of January, 1868-9:

	1869. Bbls.	1868. Bbls.
New York.....	75,233	91,000
Pittsburg.....	225,000	100,000
Philadelphia.....	60,793	111,304
Cleveland.....	100,000	46,000
Boston and Baltimore.....	20,000	20,000
Erie, Corry and Baltimore..	5,000	25,000
Oil Regions.....	264,805	554,600
railroads & Alleghany River	30,000	50,000
Total.....	780,831	997,904

We estimate that the stocks of Refined in the ited States and in and afloat for Europe, Janu-1st, 1869, eompares as follows:

	Bbls.
the United States, Jan. 1st, 1868.....	664,270
and afloat for Europe, Jan. 1st, 1869.	607,911
Total.....	1,273,181
the United States, Jan. 1st, 1869.....	520,588
and afloat for Europe, Jan. 1st, 1868.	439,668
Total.....	960,256
Decrease on Jan; 1st, 1869.....	312,925

llowing 27,000 barrels of Refined for the decrease in the stock in Western Virginia and Ohio, the total decrease in the United States and Europe was about 340,000 barrels, or a crude equivalent of about 450,000 barrels.

Lake and Canal Freights, 1868.

The following will show the average rate of lake freights on wheat and corn from Chicago to Buffalo, and Chicago to Oswego; and canal freights from Oswego to New York, and Buffalo to New York, for the navigation season of 1868:

	Wheat. 60 lbs. bu. c.	m.	f.	Corn. 56 lbs. bu. c.	m.	f.
Average Freight.						
Lake, Chicago to Buffalo ...	7	1	4	6	1	5
Canal, Buffalo to New York..	15	6	5	13	0	1
Total, Chicago to N.Y...	22	7	9	19	1	6
Average Freight.						
Lake, Chicago to Oswego....	11	6	5	10	5	8
Canal, Oswego to New York.	11	2	2	9	6	7
Total, Chicago to N. Y..	22	8	7	20	2	5

The rate to New York per ton of 2,000 lbs. based on the price of wheat by way of Buffalo at 22.7.9 cents per 60 lbs. is $7.59.6 per ton.

Annual Cotton Trade Report.

The past year opened with animation, but the demand was so freely supplied that it was not until the middle of January that any material advance in prices was noticeable. Middling Orleans was then 8d per lb, and fair Dhollera 6d. The trade was then supplying themselves freely, and the stock in this port ran down by the middle of February to 260,000 bales, and middling Orleans went to 10⅜d per lb. This advance, however, was too rapid, and a reaction took place, reducing prices ¾d per lb. The first week in March found us again advancing, and the market was extremely active, a very large business being done "to arrive." The 27th of April brought us to the maximum figures of the year; middling Orleans was worth 13¼d and 13½d to arrive. This, however, proved too high for Manchester, and prices began to decline steadily, and continued doing so until the beginning of August, when middling Orleans touched 9¾d. That figure was the signal for a revival, and 1½d per lb was soon gained. The last three months of the year have found the demand steady, prices fluctuating occasionally between 10½d and 11d for middling American, the close of the year showing prices 3½d. per lb higher than the opening.

Having thus briefly sketched the course of the cotton market during the past twelve months, we will venture an opinion as to the future. There seems to be a pretty general belief among business men that the position of commercial affairs is on the eve of improvement. The opening price of cotton is unquestionably high, but the consumption of the world has so far outrun the supply of the raw material that we can see but little prospect of a low range of prices for some months to come. The receipts at the American ports have been on too small a scale hitherto to warrant the proper estimate for 2¾ millions. But it must be borne in mind that almost every available pound of Cotton found its way to this country last year, and that the increased consumption of the United States will prevent a similar occurrence this season. It is, therefore, not at all probable that we shall receive more, if as much, from America as last year. A continued prospect of a high range of prices would naturally induce more cotton to this country than would otherwise be the case from other cotton growing countries, and a fine planting season in the United States, with a prospect of a large crop next year, will probably prevent such an advance as that reached in April last. The accounts from India are generally satisfactory; the quality of the new cotton is good, but it is feared that the Oomrawuttee and Broath districts may be a little short. Egypt will give us rather more than last year; and Brazil, whose production is rapidly increasing, considerably more, possibly 150,000 bales in excess of last crop.

The short-time movement in Manchester of late so much threatened has made but little progress. There is an evident disposition to place orders, and many manufacturers are under orders for delivery, which has the effect of keeping quotations steady; at the same time the stocks of manufactured goods are unprecedentedly low, though the Eastern markets are well supplied. *Morgans' Trade Journal.*

The Diffusion Process in Sugar Making.

On the 22nd ult, 2,651 bags of sugar produced by the new "diffusion" process of M. Jules Robert at the Aska Sugar Works (Madras Presidency) were sold in Mincing-lane for account of Messrs. Baring, Brothers & Co. This lot is a part of last season's produce of the Aska Works, and is the first considerable shipment of "diffusion sugar" that has been sold in the European market. The "diffusion" sugar is produced from cane without the application of the sugar mill. The cane is cut into thin ribands, or slices, and the saccharine contents of its cells are extracted by bringing the slices into contact with water at an elevated temperature. The water extracts only the soluble substances contained in the juice of the plant, while most of the impurities (which in the ordinary process pass into the juice, and must be subsequently removed at great expense) are left in the unbroken cells of the cane and do not contaminate the juice. By the diffusion process, it is said, the extraction can be carried so far that 95 per cent. of all the sugar contained in the cane is passed into the clarifier, while the best roller mills at present in use do not extract more than 75 per cent. of the sugar contained in the cane, and the average of West Indian practice is an extraction of less than 60 per cent. From this it would appear that the diffusion process, besides improving the quality of the raw sugar, is capable of yielding about 50 per cent. more sugar from a given quantity of cane than the sugar mills yield at present, and the invention is therefore attracting general attention in the trade.

—During the year 1868, seventy-two vessels of 40,144 tons were built in Nova Scotia and New Brunswick under the inspection of the French Lloyds, and ten vessels, of 6,685 tons, were repaired under direction of the agency during the same period.

Galway Mining Company.

NOTICE is hereby given that a Dividend at the Rate of Thirty per cent. per annum, for the half year ending 18th January, 1869, has been declared on the Capital paid in at that date and that the same is payable at the office of the Company at Peterborough, on and after MONDAY the FIFTEENTH of FEBRUARY, 1869.

By order of the Directors,
JOHN BURNHAM,
Sec. & Treas.

Peterborough, Feb. 11, 1869. 6t.-F.18.

Montreal House, Montreal, Canada.

TO MONETARY MEN.—Merchants, Insurance Agents Lawyers, Bankers, Railway and Steamboat Travellers, Mining Agents, Directors and Stockholders of Public Companies, and other persons visiting Montreal for business or pleasure, are here by most respectfully informed that the undersigned proposes to furnish the best hotel accommodation at the most reasonable charges. It is our study to provide every comfort and accommodation to all our guests, especially for gentlemen engaged as above. To those who have been accustomed to patronize other first-class hotels, we only ask a trial; we have the same accommodation and our table is furnished with every delicacy of the season.

H. DUCLOS.

THE CONNECTICUT MUTUAL

LIFE INSURANCE COMPANY,

HARTFORD, CONNECTICUT.

WOODBRIDGE S. OLMSTEAD, SECRETARY, | GUY. R. PHELPS, PRESIDENT,
EDWIN W. BRYANT, ACTUARY, | ZEPHANIAH PRESTON, VICE PRESIDENT.

LUCIAN S. WILCOX, MEDICAL EXAMINER.

Organized in 1846. Charter Perpetual.

The Largest Mutual Life Insurance Company. Numbering Over 75,000 Members.

BEING A PURELY MUTUAL COMPANY ITS ASSETS BELONG EXCLUSIVELY TO ITS MEMBERS,

ASSETS, $21,000,000.—Acquired by prudent and economical management of twenty-two years, without the aid of a single dollar of original capital.

SURPLUS ASSETS, $6,361,967—All profits divided among the members. Each policy holder is a member. There are no stockholders.

ITS DIVIDENDS—Have averaged over 50 per cent. annually. Total amount of dividends paid the members since its organization, $4,397,142.

ITS SUCCESS UNPARALLELED—It has arrived at the extraordinary condition where the income from annual interest alone is more than sufficient to pay all the losses. Total amount of losses paid by the Company, $6,868,528.

ITS RESPONSIBILITY—For every $100 of liabilities it has $154 of assets.

LAST YEAR'S PROSPEROUS BUSINESS.

Amount insured fiscal year, 1867 .....$45,647,191 00 | Income received fiscal year, 1867.....$7,530,886 19

During its last fiscal year this Company paid to its living members, and to the families of deceased members nearly $2,000,000, and at the same time added more than four millions to its accumulated capital.

The whole record of this Company has been one of prudent management and prosperous advancement. Among the older and leading Life Insurance Companies its average ratio of expenses to income has, through its entire history, been the lowest of any.

ITS LIBERALITY—It accommodates the insured by giving credit for part premium, and grants insurance to meet all the contingencies and wants to which Life Insurance is applicable.

It issues policies on a single life from $100 to $25,000.

MEDICAL REFEREES—J. WIDMER ROLPH, M.D.; H. H. WRIGHT, M.D.

OFFICE - - - - - - No. 90 King Street East, Toronto.

J. D. FEE, AGENT, TORONTO. | DANIEL L. SILLS, GENERAL MANAGER FOR CANADA.
Toronto, December 24, 1868. 12-1y

LIFE ASSOCIATION OF SCOTLAND.

Invested Funds Upwards of £1,000,000 Sterling.

THIS Institution differs from other Life Offices, in that the BONUSES FROM PROFITS are applied on a special system for the Policy-holder's personal benefit and enjoyment during his own lifetime, with the option of large bonus additions to the sum assured. The Policy-holder thus obtains a large reduction of present outlay, or a provision for old age of a most important amount in one cash payment, or a life annuity, without any expense or outlay whatever beyond the ordinary Assurance Premium for the Sum Assured, which remains intact for Policy-holders' heirs, or other purposes.

CANADA—MONTREAL—PLACE D'ARMES.

THE

EUROPEAN MAIL

FOR

NORTH AMERICA.

WITH WHICH IS INCORPORATED

"WILMER & SMITH'S EUROPEAN TIMES."

(Established in 1843.)

A FULL AND COMPLETE SUMMARY OF

HOME & FOREIGN NEWS

PUBLISHED WEEKLY

FOR DESPATCH BY THE MAIL STEAMER.

THE EUROPEAN MAIL

For North America, with which is incorporated 'Wilmer & Smith's European Times,' is published in the interest of the mercantile and general community.

In each issue is to be found all the reliable information, commercial and general, that can in any way prove of value to our subscribers. The greatest possible care has been, and will continue to be, taken by the Proprietors to obtain, regardless of expense, a faithful record of all market transactions in which our friends are more particularly concerned, up to within three hours of the closing of the Mail.

We furnish our readers with quotations of articles staple not generally noted in ordinary lists, of which the following is an example:—

Articles.	Prices per ton.	Cash discount.
CANADA PLATES		
Staffordshire (in L'pool) f.o.b.	£18 17 6	2½ %
Glamorgan " "	19 15 0	"
GALVANIZED IRON—		
Corrugated Shts., 20 guage fob.	17 0 0	"

The latest shipping intelligence, comprising arrivals, departures, sailings, and loadings, alphabetically arranged, is laid before our subscribers; and the tabular form adopted in the current number will be adhered to throughout every casualty being regularly noted, and the state of the freight market duly advised.

Agricultural, Legal, and Medical news, of interest is given in detail.

We publish a list of Military and Naval Stations and all changes are promptly noted.

The Proprietors of the EUROPEAN MAIL urge the great advantages of this Journal, and trust for the friendly co-operation of all who think it of importance that the Old and New World should be more closely associated by those reciprocal ties resulting from a mutual furtherance of their material interests.

The subscription is 52s. or $13 (gold) per annum, payable in advance.

Sole Agent for Toronto,

M. SHANNESSY.

PRINTED AT THE DAILY TELEGRAPH PRINTING HOUSE, BAY STREET, CORNER OF KING.

THE CANADIAN

MONETARY TIMES AND INSURANCE CHRONICLE

THE Publishers have pleasure in announcing that the success of this JOURNAL has been such as to stimulate their efforts to rend it still more valuable to the classes directly and indirectly interested in the subjects with which it deals. As the only Journal in t Dominion which gives particular attention to INSURANCE, it has enlisted the hearty support of Insurance Companies; and while, the one hand, it contends for the rights of such Companies, it equally recognizes the rights of the public.

The subject of BANKING has become of such importance, as well by reason of past legislation as by reason of anticipated changes the law respecting circulation, that it is the duty and interest of our business men to make themselves acquainted with the princip on which sound Banking rests, and to prevent any action on the part of the Legislature likely to injure the community by lessen the usefulness of our banks. The discussion of this subject in the columns of this JOURNAL has called forth expressions of satisfacti from our most astute financiers, and has done much to give us the position we now occupy in the estimation of the public.

As MINING is in its infancy in this country, a journal devoted solely to the subject could not hope to thrive; but by giving f information regarding Mining operations, and by the employment of reliable correspondents, we have done good service to an importa interest, and secured recognition from a class which, otherwise, could not have been reached.

Our purely COMMERCIAL DEPARTMENT has not been neglected, and each week's summary, while concise and pithy, has answered t same ends as a more diffuse elaboration could do, and conveyed to country dealers a complete synopsis of the changes in the Toronto a Montreal Markets.

This combination of interests which the circumstances of the country render necessary, has been of the greatest advantage to ca interest by diffusing information among all classes; but, in order to do justice to all, we have been compelled to employ a large staff writers, and to expend a considerable amount in securing trustworthy correspondents.

While we are thankful to those who have encouraged us thus far, we are anxious to extend still further the usefulness of this Journ and we call on all who consider that the enterprise is worthy of support, to lend us their assistance in making the MONETARY TIMES national organ.

On our part we promise impartiality, efficiency, and the best efforts of the ablest writers that can be secured in the Dominion. the part of our clients, we expect a cordial support and active exertion to widen our sphere of usefulness. In helping us, they he themselves.

Every Merchant, Banker, Capitalist, Insurance Agent, and Broker, can aid us, and we hope that we are not asking too much, soliciting their assistance.

We shall be happy to receive at any time articles on subjects within our jurisdiction, which, if used, will be liberally paid for.

Subscription Price.....$2 per Annum.

A reasonable discount will be made to Banks, Insurance Companies, &c., which subscribe for their Agencies.
SEND FOR A SPECIMEN COPY.
N.B.—Every subscriber to THE MONETARY TIMES will receive THE REAL ESTATE JOURNAL without further charge.

THE REAL ESTATE JOURNAL.

The objects of this Journal are as follows :—

(1.) To supply to those interested in real estate such information as is of special interest relating to sales or transfers of real pr perty in the principal cities, and throughout Ontario, construction of public works, and building improvements of every kind, increase decrease of municipal expenditure, debt and taxation, and, in short, whatever tends to influence the real estate market.

(2.) Leading articles will be furnished by competent writers on questions relating to conveyancing, the rise and fall of property, la grants, emigration, and other subjects coming within the legitimate scope of the Journal.

(3.) Lists of lands and houses for sale in every city, town and village of the Province, will appear in its columns, giving buyers t best possible opportunities for selecting desirable properties of any class, and in any locality; and, at the same time, affording sellers reliable and certain medium for reaching intending purchasers.

(4.) By a circulation extending into every corner of Canada, the announcements of advertisers will be brought to the notice of immense constituency of readers. A special feature in this connection is, that the Journal will be placed and kept on fyle at all the pri cipal hotels, reading rooms, and other public places in Ontario, and in Montreal. By these means it is confidently believed that eve class in the community will be reached.

THE REAL ESTATE JOURNAL is printed fortnightly, on good white paper, in quarto form, and is equal in size and appearance to anythi of the kind published on this continent.

Advertising, per line of nonpareil, each insertion, 5 cents. A small discount will be allowed on yearly contracts, for large spaces.
Address, "THE REAL ESTATE JOURNAL," Toronto, Ontario. Cheques should be made payable to J. M. TROUT, who w also issue all receipts for money.

Meetings.

AGRICULTURAL MUTUAL ASSURANCE ASSOCIATION OF CANADA.

At a general meeting of the members of the Association, held for the election of Directors and for such other business as might be brought before it, in London, Ont., on 17th February, 1869, the President, Crowell Willson, Esq., M. P., was called to the chair, when the ninth annual report was presented. It is as follows:

To the Members of the Agricultural Mutual Assurance Association of Canada:

In presenting to you the ninth annual report of the Company, the Directors have to treat of a year (1868) in which the losses somewhat exceeded the average rate, partly owing to the dry weather that prevailed through a long period of the summer, when burnings were more than usually frequent from fires running over the country. Every Farmers' Insurance Company suffered in the same way; almost every one, if the information that has been received be correct, in a greater degree than our Company.

Losses.—The number reported for last year was 130; 122 of these were admitted as claims, and paid without unnecessary delay; their amount, $31,148.78; 8 have not been regarded as valid claims; the Directors require further light in respect to them. If they can only see that these claims ought to be paid it will afford every one of the Board very great pleasure in doing it. Four claims that arose previously were paid last year, amounting to $1,244.25. A claim was presented a few weeks ago resulting from a fire that occurred in 1867, during the assured's absence in the States. The Directors have as yet come to no decision regarding it, but it will be attended to without delay. (This claim has since been paid in full, the Directors being satisfied it was an honest claim. The claimant, W. H. McDowell, had, however, forfeited every shadow of legal right.)

Policies.—11,526 were issued on applications received during the year. Of these 8,571 were on the cash system, and 2,955 on the premium note one. Of the aggregate 217 did not come into force till this year, while 164 issued in 1867 did not begin to run till last year. During the year 9,345 either lapsed or were cancelled. On the 1st of January, 1868, there were in force 28,764; on the first of the current year, 30,892, showing an increase of 2,128. The average amount of those in force it will be seen is $758.51.

Continued Preference of Cash System.—It is shewn that the cash system still commands the preference. Whether this will continue in so marked a manner when it becomes more generally known that the pre-payment theretofore required on the premium note system was last year decided to be dispensed with, may be questioned. Members, or those desirous of becoming so, may take their choice. Only farm property, however, is insured on the premium note system.

Capital.—Appended will be found a full financial statement. The Directors flatter themselves they may fairly congratulate you on the exhibit there made. It must not be supposed, however, that the cash and stock on hand is all *earned* premium; it is available, and will be used to meet the current losses that may, and in fact must be looked for. At the same time it ought to be borne in mind that the rates of this Company have been as low as those of any well established company, and much lower than of a great many; yet your Directors have so managed matters that no other "Fire Mutual" in the country can present anything like so favorable a financial aspect. This is the only one that, having complied with the Dominion Insurance Act, has been licensed by that Government. The Directors last year paid into the Receiver General $12,000 pursuant to that Act, and last week—subsequently to the completion of the appended exhibit—$13,000 more—$25,000 in all. It bears 6 per cent. interest, producing $1,500 a year. The Directors doubt not you will approve of their course in the premises. The sum of $65,000 would more than reinsure all outstanding risks at the ratio of your losses hitherto. We have in cash and Dominion stock $48,652.92, besides other available assets to the extent of $181,540.90, less by a few hundred dollars as stated—as to which, as well as for details generally, see appendix. Members may rest quite satisfied of the Company's ability to pay, if they unfortunately get burned out.

Incendiarism—Proposed Remedy.—It has been stated that numerous losses occurred during the dry term last summer. Unfortunately, there were other prominent causes of loss in operation. The demon of incendiarism still stalks abroad on his fiendish course. By referring to the table of losses, several such cases will be seen. No less than eleven fires are supposed to have so originated; while of those for which no probable cause has been assigned—43 in number—some may reasonably enough be attributed to the same source. The Directors do all they can to bring such offenders to justice—they offer a standing reward of $200 for such information as will convict. But they are of opinion the Legislature could apply, at any rate, a partial remedy for the fearful evil. In the report for 1864 it was stated: "It is to be regretted there does not exist some thorough mode of investigating into the origin and circumstances of suspicious fires throughout the country. A coroner's inquest is a cumbrous affair, and the head of it, for the most part, more qualified to deal with matters of life and death, than with ferretting out the intricacies of evidence so as to convict of incendiarism. A fire inspector in each county, selected for adaptation to the work, and clothed with ample powers, would probably prove a more effective check to those diabolical acts. It is to be hoped, not in the interests of insurance companies alone, but for the sake of the country at large, and of public morality, that the Legislature may before long see fit to apply some correction to the great and growing evil." The Royal Insurance Company of England, one of the most important in the world, the following year took up the same idea. They recommended a similar course to the British Legislature. Towards the close of the last Parliament a committee was appointed to whom the matter was referred. Mr. Thos. B. Horsfall, one of the representatives for Liverpool, was a member; they brought in a report, recommending among other things, that "judicial enquiry should be made into fires, with power to examine witnesses on oath.

Your Board think if suitable persons were appointed at convenient centres throughout the

country, endued with inquisitorial powers to investigate suspicious fires when duly called on, a great good would be done. An innocent man would be glad of an opportunity of removing suspicion from himself—and as for the guilty, the intention is not, of course, to study their comfort. The very existence of such an ordeal would tend to deter. There would be fewer burnings—rates would be lower, and not only that, but there would be less litigation in proportion before the Courts. Honest claimants, with somewhat doubtful surroundings (for such things do occur), might oft times be able to secure a prompt payment of their rights, for it would not be profitable for an insurance company to brave the decision, if against it, of an able, competent inquisitor of high standing, pronounced after a full judicial examination. Protection would be afforded to companies and individuals alike. Nor would the plan necessarily involve any drain on the public exchequer.

Cases of malicious incendiarism are more particularly referred to above. It seems to the Directors, as well as to our efficient inspector, Mr. Niles, that there has been a diminuition in speculative burnings.

Other causes of Fire.—Fires have also arisen from other causes, which might be well avoided. Only the other day notice was received of a loss, in which the claimant states. I can suppose no other cause than soot in the pipes." More than likely such was the case; eleven of the paid for losses in the appended list arose from stove pipes, and nineteen from dirty defective chimneys, setting fire to roofs or other parts of the buildings. Another prolific source of fires is children playing with matches. A very little care might have prevented most of the losses occurring under those heads.

Two-thirds Clause—Is a modification wanted? It has been a rule of the Company to insure up to two thirds only of buildings and their contents, requiring each member to bear at least one third the risk of the property insured. This seemed to be approved of by the great bulk of the members. Of late, however, very many have become dissatisfied with it, desiring that they should no longer be required to risk a third of the "ordinary contents." In view of this feeling, the Directors have resolved to submit the question to-day to your decision, to which, whatever it is, effect will be given. It will be put to the vote by-and-bye.

Improvement in paying up.—The Board willingly bear testimony to the fact that the members generally are paying up their dues much better than formerly. The Directors will use no coercive means hastily but at the same time they have a duty to perform, which they will not neglect. They trust to have but little trouble on this score.

Retiring Directors.—Three now go out in rotation—Messrs. Biddulph, Eccles, and Dunlop; they are eligible for re-election.

CROWELL WILLSON, President.
D. C. MACDONALD, Secretary.

The Report being read, it was moved by James Johnson, Esquire, Sunnyside, seconded by John Kearns, Esq., Deputy Reeve of London Township, that the Directors' report be received and adopted. Carried unanimously.

A few remarks were made by the Rev. J. H. Robinson, Geo. G. Magee, W. R. Vining, Esquires, and others, touching the conditions of the policies, the two former gentlemen contending they were too stringent. Explanations were then given, after which it was put to the meeting, whether it is advisable to alter the conditions of insurance so that the full amount of loss on "ordinary contents" of buildings be paid, not exceeding the amount insured? which was decided in the affirmative.

Captain O'Malley, Andrew Ellis and Alexander McKenzie, Esquires, were appointed scrutineers, when the election for three Directors was proceeded with. After a ballot was taken, the scrutineers reported that Samuel Eccles, Hamilton Dunlop and Richard Biddulph had been re-elected.

A vote of thanks was then passed to the Chairman, and the meeting adjourned.

At a meeting of the Board held subsequently, C. Wilson, Esq., M.P., was re-elected President, and W. R. Vining, Esq., Vice-President, for the ensuing year; and the Board passed a by-law giving effect to the vote of the annual meeting, as to the insurance on the "ordinary contents" of buildings, to take effect as regards all losses from the first of this year.

QUEBEC MARINE AND FIRE INSURANCE COMPANY.—The annual general meeting of the above Company was held on Monday, at its office, in Quebec, when the report and statements for the year were read and adopted, and the following gentlemen elected Directors:—Messrs. W. Withall, A. Joseph, Ed. Burstall, Jas. G. Ross, J. Gaudry, J. B. Renaud, M. G. Mountain, D. C. Thomson and Thomas Becket.

—At the general meeting of the Directors of the St. Lawrence Navigation Company, held on the 24th instant, the Hon. Louis Renaud, Messrs. C. L. Rodier, L. Haineault, H. Coote, J. Bte. Auger, A. Rimmer, A. Shannon, M. McKenzie, and M. Cuvilier, were elected Directors for the ensuing year. The new Board met the same afternoon, and elected the following officers for the next year:—Hon Louis Renaud, President; C. L. Rodier, Vice-President; F. A. Trudel, Secretary; J. Bte. Auger, General Manager; and John McMartin, Agent.

—At the general annual meeting of the Saint John Mutual Insurance Company, held at their office in Wiggins building, Princess street, on Monday, Februrry 1, 1869, the following gentlemen were elected for the current year, viz: John Smith, President; C. H. Estabrooks, W. K. Reynolds, James Harris, Robert J. Leonard, Directors; A. Ballentine, Barrister and Solicitor, and J. Woodward, Secretary. A dividend of forty-five per cent was declared on the business of 1867.

—A meeting has been called at Laurent, Jacques Cartier Co., Province of Quebec, for the 29th Feb., to organize a mutual fire insurance company.

Insurance.

FIRE RECORD.—Ottawa, Feb. 27.—A fire broke out in the rear of a saloon occupied by John Cahill, just opposite the Russell House, caused, it is supposed, by some defect in the chimney. Cahill lost all his furniture and stock of liquors, with the exception of some bar fixtures. His loss is but partially covered by an insurance of $1,000 in the Imperial. The building adjoining, occupied by Rebertson & Lawrence, merchant tailors, was also destroyed. They had a large stock of cloths and ready-made clothing on hand, principally saved. Insured for $1,000 in the British America; will more than cover the damage sustained. The upper flat of the same building was occupied by Mrs. Greenwood as a boarding-house. A portion of the furniture saved. No insurance. Owing to the exertions of the hook and ladder company, the great quantity of snow on the roofs, and the arrival after a long time of a few barrels of water, the fire was checked at the west building, owned by Messrs. Durie & Son, and occupied by them as a book-store. The roof of the building was partially burned; $1,200 insurance in the British America on building. The stock saved; the insurance on stock, $2,000 in Western and Home. The flat above the book-store was occupied by Mr. Peckett, dentist; loss not large; insured for $500 in the Western of Canada. The buildings totally destroyed were owned by Alderman James, and insured in the Liverpool and London for $2,000. They were wooden buildings and old. Total loss estimated at over $10,000. Mr. Orme is insured in the North British and Mercantile; loss very slight.

February 21.—Mr. Charles Mathews, lot 21, first concession, south of the Egremont road, had his dwelling house and furniture totally destroyed by fire. Loss of house and furniture, $1,000; insured in the Agricultural Mutual—building $300 and furniture $150. The fire is supposed to have occurred by a defect in the chimney.

Brock Township, Ont., Feb. 22.—The barn, stables, sheds and other buildings of a farmer named Quin, near to Vroomanton, Brock, were consumed, including everything in and around the barn, grain, hay, straw stacks, etc. We have failed to learn particulars.

Fredericton, N. B., Feb. 16.—The billiard room and bowling alley belonging to F. W. Miles, was discovered to be on fire. The new steam fire-engine was on the spot soon after the alarm was given, and speedily extinguished the flames, but not before considerable damage had been done to both building and furniture, which, however, were partly insured.

Normanby Township, Ont., Feb. —.—Barn of Robert Hopkins, with contents, comprising a quantity of hay, wheat and other farm produce, was totally consumed by fire on Thursday night last. The origin of the fire is unknown. No insurance.

King Township, Feb. 22.—The dwelling house and woodshed of Abram Carley, on lot No. 7, in the 6th concession, was burned with contents. The family had barely time to escape with their lives. The house was insured for $400; loss about $1,000. The origin of the fire is supposed to be accidental.

Strathroy, Feb. 30.—The dwelling house of Wm. Matthews, lot 21, 2d concession, Adelaide, was destroyed by fire supposed to have originated in the chimney. Mr. Matthews and his family had barely time to escape, and saved very little of their effects.

Belleville, Feb. —.—A fire broke out in the building formerly used as a malthouse, adjoining the "Tiger" Brewery, Bridge street, but lately occupied as a storehouse, grinding mill and stables. The building burned contained a large quantity of hops, oats, hay, etc., valued at about $900, the greater part of which was destroyed. L. J. Williams, the owner, we understand, is insured in the Western for $600. The building was owned by F. McAnnany, and was insured in the Provincial. The origin of the fire is a mystery, as no fire had been used in the building for a year past.

Sarnia, Feb. 24.—The dwelling house of Mrs. Gilbert, situated on the River road, between Corunna and Moore, was destroyed by fire. The fire originated, it is said, from a defective chimney. Furniture partly saved. The building is said to be insured for $200, but this will fall far short of covering the loss.

Digby, N. S., Mar. 1.—A telegram says, that six houses were destroyed by fire; no insurance.

Roxton, Pond, Prov. of Quebec, July 11.—Kimpton's store and contents were totally destroyed. The stock was fully insured in the Home, of New Haven.

PHŒNIX OF LONDON.—The following shows the results of the business of the Phœnix Insurance Co. of London, in Canada, for the year ended 30th November, 1868:—Premiums received $84,562.15; number of policies issued, 1,069; amount of same, $4,159,188.00; amount at risk, $9,202,098.00; number of policies that have become claims, 41; amount of same, $358,375.00; losses, $37,988.49; losses in suspense and waiting further proof, $1,500.00; losses, the payment of which is resisted, none; premiums earned, $84,562.15.

ANOTHER INTERNATIONAL BRIDGE.

A report by a Committee of the Buffalo City Council on the subject of a new International Bridge between Buffalo and Fort Erie has been published. The following letter, from Mr. Brydges, explains what he is prepared to do in the matter :—

"I hold the control of the bridge charters of both sides of the river, and control the majority of the stock held by the corporations existing—one chartered by the Legislature of the State of New York, and the other by the Parliament of Canada. The amount of stock subscribed for under both charters is $1,300,000, viz., $1,000,000 upon the American side and $300,000 upon the Canadian side.

"My object, and that of the Canadian railway companies which I represent, is to get the Bridge constructed at the earliest possible date ; so that the American railway companies on the one side, and the Canadian railways, on the other, and the city of Buffalo, may obtain the advantage of the communication which the Bridge will afford.

"The construction of the Bridge being assured, I am prepared, so far as my control of the charters is concerned, to place such control in the hands of those who will bring about the arrangements necessary for the construction of the work.

"I, therefore, as President of the Bridge Company, now state to you that so soon as the City of Buffalo has, in accordance with the powers which it now possesses, undertaken to guarantee interest upon $1,350,000 of bonds, which sum will be sufficient to secure the completion of the Bridge, I shall be prepared at once to transfer, upon the execution of the necessary deeds, the sum of $700,000 of the stock of the Bridge Company, which will be sufficient to give the control of the Bridge Company to the parties holding those shares.

"I will take care that, before making this transfer, a resolution is passed by the Bridge Company which will prevent the creation of any new shares beyond the $1,300,000 now in existence.

"The right of issuing any further shares will therefore rest, if it is hereafter desired, with those who hold the majority of stock."

The Committee of the Council reply as follows:

The Committee feel assured that Mr. Brydges is not only desirous, but has full authority, to carry out the measures which he proposes, and that upon the City agreeing that in case the said stock is transfered, and the other stipulations contained in Mr. Brydge's communication complied with, that the control of the stock will be transferred to citizens of Buffalo, and his propositions will be fully carried out.

And your Committee are equally confident that no difficulty will be encountered in finding citizens of Buffalo of sufficient character and ability to take the transfer of the stock upon the conditions proposed by Mr. Brydges, and pay the advance thereon.

* * * * * * * * *

The proposition of the Grand Trunk Railway to pay $50,000 annually for the use of the Bridge of itself, provides for nearly two-thirds of such interest, and the compensation received from the other great lines of railway, including in fact all the completed lines from the East to the Great West, together with the tolls received from the use of the Bridge by the general public, will not only secure the city from loss, but render the work remunerative to those who shall complete the same.

Financial.

TORONTO STOCK MARKET.

(Reported by Pellatt & Osler, Brokers.)

Business was rather more active during the past week, and prices are in most instances without change.

Bank Stock.—There were sales of Bank of Montreal at 139½; holders now ask 140. Ontario is much firmer this week; there are no sellers under par. Buyers offer 121 for Toronto; very little is offered. Royal Canadian has declined 1 per cent.; the last sales were at 89. There were large transactions in Commerce at 103; holders now ask 103¼. Gore is inquired for at 41; nothing doing. Merchants' has advanced, and transactions have occurred at 109. Buyers offer 99 for Quebec, but there are no sellers. Molson's is inquired for at 112. Sales of City occurred at 103 and 103½, but the demand is small. Du Peuple sold at 106, ex dividend. Nationale is nominal at 106½; there are no sellers. Jacques Cartier is asked for at 108½. Mechanics' is inquired for at 95, and there are buyers of Union at 104; no sales. Other banks nominal.

Debentures.—Canada sterling six per cents sold at 103, and five per cents are offered at 94½. No Dominion Stock in market. Toronto are enquired for but not offered. No County offering. There were large sales of Township debentures at rates to pay 6¾ per cent.

Sundries.—Sales of British America Assurance at 55½, at which rate it is still offering. Canada Permanent Building Society sold at 125 to 125½, with little offering ; sales of Western Canada occurred at 120 and 120½ ; sellers now asking 121; no Freehold offering ; there are buyers at 110. Montreal Telegraph sold at 133½. There were several transactions in Canada Landed Credit at 73½, ex dividend. Several mortgages have been placed during the week at 8 per cent. Money is in rather more demand.

MONTREAL STOCK MARKET.

MONTREAL, March 1, 1869.

In stocks this week there has been little doing. Montreal closes at 140, with prospects of higher prices ; City 103; Molson's 112 to 113; Ontario about par; Bank of Toronto 121 to 122; Merchants' Bank 108½ to 109 ; Royal Canadian 89 and 89½ ; Bank of Commerce 103.

In bonds there have been some transactions at our quotations. There is little doing in exchange which is quoted at about 9 per cent. premium. Gold drafts on New York are worth par and a small premium owing to the decline in sterling. Silver keeps steady at 3½ discount notwithstanding the immense export demand. The principal feature in our market has been the decline of gold in New York, through which it is rumoured one of our heaviest capitalists has lost heavily. Several small dabblers also find themselves slightly crippled.

A NEW BANK.—It is proposed to organiz soon as possible, the Exchange Bank of Yarmo of Nova Scotia, for which a charter was obta two years ago. The proposed capital is $200 divided into 2,000 shares of $100 each. S books are now open, and it is intended to go operation by 1st August, 1869.

NOVA SCOTIA GOLD FIELDS.

HALIFAX, N. S., Feb. 18, 18

The present lull in gold mining affairs is felt by speculators than by the older establ companies whose mill returns for January (below as far as received at the Chief Com sioner's Office) prove the presence of the s for metal in quantity sufficient to well repa intelligent and economical search for it. from the several districts there are none. returns from Uniacke are not in, but the r from the Mount Uniacke Company confirm existence of two lodes of aggregate width of in their cross-cut which yield an average dwts., and can be mined and reduced for $ Prospecting parties are to work on the Mayf lot, and other small properties on the same r The Prince of Wales Company, the Central pany, the Montreal Association, and the M Uniacke Company, however, are the only p producers.

Prospectors are busy, too, at Musquod Beaver Dam, and Fifteen Mile Stream.
